Contents

1 Introduction .............................................. 1
  1.1 Need for Control Performance Management (CPM) ........ 2
    1.1.1 Objectives and Importance of Control Assets ........ 3
    1.1.2 State of Industrial Process Control Performance .... 6
    1.1.3 Root Causes of Control Performance Problems ...... 8
  1.2 Principle and Tasks of Control Performance Management ... 11
    1.2.1 Control Performance Indices .................. 12
    1.2.2 Basic Procedure for Control Performance Management . 14
    1.2.3 Controller Performance Assessment Benchmarks .... 16
    1.2.4 Challenges of Performance Monitoring Applications .. 17
  1.3 Key Dates of the Development of CPM Technology and Literature Survey .................................. 18
  1.4 Outline of the Book ................................... 22

Part I Evaluation of the Level of Control Performance

2 Assessment Based on Minimum-Variance Principles ............ 29
  2.1 System Descriptions and Basics .......................... 29
    2.1.1 Note on Input–Output Models .................... 31
  2.2 Minimum-Variance Control (MVC) ......................... 32
  2.3 Auto-Correlation Test for Minimum Variance .............. 36
  2.4 Minimum-Variance Index/Harris Index ..................... 38
    2.4.1 Estimation from Time-Series Analysis ............ 39
    2.4.2 Estimation Algorithms .......................... 42
  2.5 Assessment of Feedback/Feedforward Controls ............. 49
  2.6 Assessment of Set-Point Tracking and Cascade Control .... 54
    2.6.1 Performance Assessment of Cascade Control Systems . 54
    2.6.2 Assessment of Different Tuning Strategies ......... 60
  2.7 Summary and Conclusions ............................... 62

3 User-Specified Benchmarking ................................ 65
  3.1 General Setting ....................................... 65
## 3.2 IMC-Achievable Performance Assessment

- **3.2.1 IMC Design**
- **3.2.2 IMC Benchmark**

## 3.3 Extended Horizon Approach

## 3.4 Performance Index Based on Desired Pole Locations

## 3.5 Historical or Reference Benchmarks

## 3.6 Reference-Model/Relative Performance Index

- **3.6.1 Selection of the Reference Model**
- **3.6.2 Disturbance Estimation**
- **3.6.3 Selection of Critical Index Value**
- **3.6.4 Index Properties**

## 3.7 Summary and Conclusions

## 4 Advanced Control Performance Assessment

### 4.1 Generalised Minimum-Variance Control (GMVC) Benchmarking

- **4.1.1 GMV Control**
- **4.1.2 Selection of Weightings**
- **4.1.3 GMVC with Static Weightings**
- **4.1.4 Assessment Index and Procedure**

### 4.2 Linear-Quadratic Gaussian (LQG) Benchmarking

- **4.2.1 Classical LQG Framework**
- **4.2.2 Polynomial Domain Approach**
- **4.2.3 LQG Framework as Special Case of MPC**
- **4.2.4 Subspace-Based LQG Design**
- **4.2.5 Generation of the LQG Performance Limit Curve**
- **4.2.6 LQG Assessment Using Routine Operating Data**

### 4.3 Model Predictive Control (MPC) Assessment

- **4.3.1 Basic Principle and Properties**
- **4.3.2 Constrained Minimum-Variance Control**
- **4.3.3 Design-Case MPC Benchmarking**
- **4.3.4 Infinite-Horizon Model Predictive Control**
- **4.3.5 Assessing the Effect of Constraints**
- **4.3.6 Economic Performance Assessment of MPC**

### 4.4 Summary and Conclusions

## 5 Deterministic Controller Assessment

### 5.1 Performance Metrics

### 5.2 Controller Assessment Based on Set-Point Response Data

- **5.2.1 Normalised Criteria**
- **5.2.2 Assessment Methodology**
- **5.2.3 Determination of Time Delay from Step Response**
- **5.2.4 Application Examples**

### 5.3 Idle Index for Detecting Sluggish Control

- **5.3.1 Characterisation of Sluggish Control**
- **5.3.2 Idle Index**

## Contents

- **3.2 IMC-Achievable Performance Assessment**
- **3.2.1 IMC Design**
- **3.2.2 IMC Benchmark**
- **3.3 Extended Horizon Approach**

</table>
10.3.3 Nonlinearity Detection Procedure

10.3.4 Spurious Nonlinearity—Pitfalls in the Surrogate Data

10.3.5 Default Parameter Values and Practical Issues

10.4 Detection of Saturated Actuators

10.4.1 Saturation Test Based on Statistical Distribution

10.4.2 Saturation Index for Valve Monitoring

10.5 Comparative Studies

10.5.1 Unit-Wide Oscillation Caused by a Sensor Fault

10.5.2 Plant-Wide Oscillation Caused by a Valve Fault

10.6 Summary and Conclusions

11 Diagnosis of Stiction-Related Actuator Problems

11.1 Typical Valve-Controlled Loop

11.2 Effects Relating to Valve Nonlinearity

11.3 Stiction Analysis

11.3.1 Effect of Stiction in Control Loops

11.3.2 Physically Based Stiction Modelling

11.3.3 Data-Driven Stiction Modelling

11.3.4 Typical Trends of Variables and Input–Output Shape Analysis

11.4 Stiction Diagnosis Based on Shape Analysis of MV–OP Plots

11.4.1 Stuck Indices

11.5 Cross-Correlation-Based Stiction Detection

11.6 Diagnosis Based on Curve Fitting

11.6.1 Sinusoidal Fitting

11.6.2 Triangular Fitting

11.6.3 Stiction Index and Detection Procedure

11.6.4 Similar Techniques

11.7 Nonlinearity Detection and PV–OP Pattern Analysis

11.7.1 Stiction Detection and Estimation Procedure

11.7.2 Practical Issues

11.8 Tests to Confirm Stiction

11.8.1 Controller Gain Change Test

11.8.2 Valve Travel or Bump Test

11.9 Stiction Diagnosis Procedure

11.10 Summary and Conclusions

12 Complete Oscillation Diagnosis Based on Hammerstein Modelling

12.1 Features of the Proposed Framework

12.2 Identification Model Structure

12.3 Identification Algorithm

12.3.1 Linear Model Estimation

12.3.2 Nonlinear Model Estimation

12.4 Key Issues

12.4.1 Model Structure Selection
Part III  Performance Improvement

13 Performance Monitoring and Improvement Strategies   . 333
  13.1 Performance Improvement Measures   . 333
  13.2 Loop Monitoring Paradigms   . 335
    13.2.1 Bottom-Up and Top-Down Approaches   . 335
    13.2.2 Loop Prioritisation and Ranking   . 337
    13.2.3 Relationship to Economical Benefits   . 337
  13.3 Comprehensive Procedure for Performance Monitoring   . 338
  13.4 Summary and Conclusions   . 341

14 Controller Auto-Tuning Based on Control Performance Monitoring   . 343
  14.1 Basic Concepts of Controller Auto-Tuning and Adaptation   . 345
  14.2 Overview and Classification of CPM-Based Tuning Methods   . 346
  14.3 Optimisation-Based Assessment and Tuning   . 347
    14.3.1 Methods Based on Complete Knowledge of System Model   . 347
    14.3.2 Techniques Based on Routine and Set-Point Response Data   . 356
  14.4 Iterative Controller Assessment and Tuning   . 362
    14.4.1 Techniques Based on Load Disturbance Changes   . 362
    14.4.2 Methods Based on Routine Data and Impulse Response Assessment   . 366
  14.5 Strategies for Variation of Controller Parameters   . 380
    14.5.1 Variation of Proportional Gain Alone and Fine Tuning of Integral Time   . 380
    14.5.2 Simultaneous Variation   . 381
    14.5.3 Successive Variation   . 381
    14.5.4 Constraints and Loop Stability   . 382
  14.6 Comparative Studies   . 383
  14.7 Summary and Conclusions   . 385

Part IV  Applications and Tools

15 Industrial CPM Technology and Applications   . 389
  15.1 Demands on Performance Monitoring Algorithms   . 389
  15.2 Review of Control Performance Monitoring Applications   . 391
    15.2.1 Analysis of Fields of Application   . 393
16 Performance Monitoring of Metal Processing Control Systems ............................................ 403
   16.1 Introduction to the Metal Processing Technology ......................................................... 404
   16.1.1 Steel Processing Route and Control Objectives ..................................................... 404
   16.1.2 Control Objectives ................................................................................................. 406
   16.1.3 Mill Automation ...................................................................................................... 409
   16.1.4 Overview of Metal Processing Control Systems ...................................................... 411
   16.1.5 Technological Control Systems .............................................................................. 414
   16.2 Practical Aspects of Performance Assessment in Metal Processing ............................. 415
   16.2.1 Online vs. Batch-Wise Evaluation .......................................................................... 415
   16.2.2 Oscillation Diagnosis .............................................................................................. 416
   16.2.3 Time-Based vs. Length-Based Assessment .............................................................. 417
   16.2.4 User-Specified Indices ......................................................................................... 418
   16.3 Industrial Cases Studies and Developed Monitoring Tools ......................................... 418
       16.3.1 Gauge Control in Cold Tandem Mills ................................................................. 419
       16.3.2 Flatness Control in Cold Tandem Mills ................................................................. 424
       16.3.3 Temperature Control in Annealing Lines ............................................................. 427
   16.4 Summary and Conclusions ............................................................................................ 439

Appendix A  Basic Signal Processing and Statistics ................................................................. 441
   A.1 Ergodicity .................................................................................................................... 441
   A.2 Expectation and Variance ............................................................................................ 441
   A.3 Correlation and Covariance ....................................................................................... 442
   A.4 Discrete Fourier Transform ....................................................................................... 443
   A.5 Power Spectrum and Coherence Function ................................................................... 444

Appendix B  Higher-Order Statistics ....................................................................................... 447
   B.1 Moments and Cumulants ............................................................................................. 447
   B.2 Polyspectra and Coherence Functions ......................................................................... 449
   B.3 Estimating the Bispectrum from Data .......................................................................... 451
   B.4 Skewness and Squared Bicoherence Functions ............................................................ 452

Appendix C  Control Loops from Different Industries ............................................................ 457
