

Contents

Atomistic Modeling of Electrode Materials for Li-Ion Batteries: From Bulk to Interfaces	1
Matthieu Saubanère, Jean-Sébastien Filhol and Marie-Liesse Doublet	
Multi-scale Simulation Study of Pt-Alloys Degradation for Fuel Cells Applications	37
G. Ramos-Sánchez, Nhi Dang and Perla B. Balbuena	
Molecular Dynamics Simulations of Electrochemical Energy Storage Devices	61
Dario Marrocchelli, Céline Merlet and Mathieu Salanne	
Continuum, Macroscopic Modeling of Polymer-Electrolyte Fuel Cells	91
Sivagaminathan Balasubramanian and Adam Z. Weber	
Mathematical Modeling of Aging of Li-Ion Batteries	151
Charles Delacourt and Mohammadhosein Safari	
Fuel Cells and Batteries In Silico Experimentation Through Integrative Multiscale Modeling	191
Alejandro A. Franco	
Cost Modeling and Valuation of Grid-Scale Electrochemical Energy Storage Technologies	235
Kourosh Malek and Jatin Nathwani

Physical Multiscale Modeling and Numerical Simulation
of Electrochemical Devices for Energy Conversion and
Storage

From Theory to Engineering to Practice

Franco, A.A.; Doublet, M.L.; Bessler, W.G. (Eds.)

2016, VII, 249 p., Hardcover

ISBN: 978-1-4471-5676-5
