

Contents

1 Preliminaries	1
1.1 Notation	1
1.2 Useful Theorems	4
1.3 Force Fields	6
1.3.1 Exercises for Sect. 1.3.	7
References	8
2 Laplace's Equation	9
2.1 Introduction	9
2.1.1 Exercises for Sect. 2.1.	10
2.2 Green's Theorem	10
2.3 Fundamental Harmonic Function	11
2.3.1 Exercises for Sect. 2.3.	13
2.4 The Mean Value Property	13
2.4.1 Exercises for Sect. 2.4.	17
2.5 Poisson Integral Formula	17
2.5.1 Exercises for Sect. 2.5.	24
2.6 Gauss' Averaging Principle	25
2.6.1 Exercises for Sect. 2.6.	28
2.7 The Dirichlet Problem for a Ball	29
2.7.1 Exercises for Sect. 2.7.	37
2.8 Kelvin Transformation	38
2.8.1 Exercises for Sect. 2.8.	40
2.9 Poisson Integral for Half-Space	41
2.9.1 Exercises for Sect. 2.9.	46
2.10 Neumann Problem for a Disk	47
2.10.1 Exercises for Sect. 2.10.	50
2.11 Neumann Problem for the Ball	51
2.12 Spherical Harmonics	57
2.12.1 Exercises for Sect. 2.12.	61
References	61

3	The Dirichlet Problem	63
3.1	Introduction	63
3.2	Sequences of Harmonic Functions	64
3.2.1	Exercises for Sect. 3.2.	69
3.3	Superharmonic Functions.	69
3.3.1	Exercises for Sect. 3.3.	75
3.4	Properties of Superharmonic Functions	75
3.4.1	Exercises for Sect. 3.4.	81
3.5	Approximation of Superharmonic Functions	81
3.5.1	Exercises for Sect. 3.5.	86
3.6	Perron–Wiener Method	86
3.6.1	Exercises for Sect. 3.6.	101
3.7	The Radial Limit Theorem	102
3.7.1	Exercises for Sect. 3.7.	106
3.8	Nontangential Boundary Limit Theorem	106
3.9	Harmonic Measure	114
	References	119
4	Green Functions	121
4.1	Introduction	121
4.2	Green Functions	122
4.2.1	Exercises for Sect. 4.2.	131
4.3	Symmetry of the Green Function	131
4.4	Green Potentials	138
4.5	Riesz Decomposition	151
4.5.1	Exercises for Sect. 4.5.	161
4.6	Properties of Potentials	161
	References	164
5	Negligible Sets	165
5.1	Introduction	165
5.2	Superharmonic Extensions	165
5.2.1	Exercises for Sect. 5.2.	174
5.3	Reduction of Superharmonic Functions	174
5.4	Capacity	179
5.4.1	Exercises for Sect. 5.4.	195
5.5	Boundary Behavior of the Green Function.	195
5.6	Applications.	199
5.7	Sweeping.	206
	References	213
6	Dirichlet Problem for Unbounded Regions	215
6.1	Introduction	215
6.2	Exterior Dirichlet Problem.	215

- 6.3 PWB Method for Unbounded Regions 222
- 6.4 Boundary Behavior 228
- 6.5 Intrinsic Topology 241
- 6.6 Thin Sets 242
- 6.7 Thinness and Regularity 246
- References 258

- 7 Energy 259**
 - 7.1 Introduction 259
 - 7.2 Energy Principle 259
 - 7.3 Mutual Energy 267
 - 7.4 Projections of Measures 275
 - 7.5 Wiener’s Test 278
 - References 284

- 8 Interpolation and Monotonicity 285**
 - 8.1 Introduction 285
 - 8.2 Hölder Spaces 286
 - 8.3 Global Interpolation 291
 - 8.4 Interpolation of Weighted Norms 299
 - 8.5 Inner Norms 302
 - 8.6 Monotonicity 306
 - References 320

- 9 Newtonian Potential 321**
 - 9.1 Introduction 321
 - 9.2 Subnewtonian Kernels 321
 - 9.3 Poisson’s Equation 335
 - 9.3.1 Exercises for Sect. 9.3 337
 - 9.4 Hölder Continuity of Second Derivatives 337
