1 Introduction ................................................................. 1
  1.1 Motivation .................................................................... 1
  1.2 Book Research Objectives ..................................... 4
  1.3 Outline of the Book ............................................. 5

2 Modulation Schemes Effect on RF Power Amplifier
Nonlinearity and RFPA Linearization Techniques .............. 7
  2.1 Introduction ............................................................. 7
  2.2 RF Modulation Scheme in Bandpass Radio
Communication Channel .................................................. 7
    2.2.1 Ideal Radio Transmitter ........................................ 9
    2.2.2 RF Power Amplifier Linearity for Non-
Modulated Signal ........................................................ 9
    2.2.3 RF Power Amplifier Linearity for Modulated Signals ...... 14
    2.2.4 RF Power Amplifier Spectral Regrowth:
Out-of-band Distortion ............................................. 16
    2.2.5 Error Vector Magnitude Signal Modulation
Quality: In-band Distortion .................................... 19
  2.3 Role of RF Power Amplifier Linearization Techniques .... 20
    2.3.1 RF Power Amplifier Power Back-off .................... 21
    2.3.2 RF Power Amplifier Feedforward Linearization ...... 22
    2.3.3 RF Power Amplifier Cartesian Indirect Feedback
Linearization .......................................................... 23
    2.3.4 RF Power Amplifier Polar Feedback Linearization ...... 24
    2.3.5 RF Power Amplifier RF Predistortion Linearization ...... 24
  2.4 Radio-over-Fiber for Wireless Communication ............ 26
  2.5 Summary ............................................................... 28

3 Distributed Amplification Principles and Transconductor
Nonlinearity Compensation ............................................. 29
  3.1 Introduction ............................................................. 29
### 3.2 Distributed Amplification Principles

- **3.2.1 Additive Distributed Versus Product Cascaded Amplification** ........................................ 29
- **3.2.2 Lumped Constant Delay Line Characteristics** .......................................................... 33
- **3.2.3 Lossless Distributed Amplification** .............................................................................. 36
- **3.2.4 Lossy Distributed Amplification** ................................................................................. 38

### 3.3 Transconductor Gain Cells for Fully-Differential Distributed Amplifiers .......................... 42

### 3.4 Chapter Summary ................................................................. 46

### 4 Distributed RF Linearization Circuit Applications .................................................. 47

#### 4.1 Introduction .................................................................................. 47

#### 4.2 Linearized CMOS Distributed Active Power Splitter ................................. 47

- **4.2.1 Amplitude and Phase Imbalance of Linearized CMOS Distributed Active Power Splitter** ...................... 50
- **4.2.2 CMOS Distributed Active Power Splitter Using Multiple-Gated Transistor Linearization** ...................... 51

#### 4.3 Linearized CMOS Distributed Matrix Amplifier Architecture .................. 55

- **4.3.1 CMOS Distributed 2 × 3 Matrix Amplifier with Interleaved Distributed Loading Technique** .............. 56
- **4.3.2 Proposed CMOS Interleaved Distributed 2 × 3 Matrix Amplifier with Post Distortion and Gate Optimum Bias Linearization Technique** ..................... 57

#### 4.4 Linearized CMOS Distributed Paraphase Amplifier ................................. 63

- **4.4.1 Amplitude and Phase Imbalance of Linearized CMOS Distributed Paraphase Amplifier** ...................... 66
- **4.4.2 CMOS Distributed Paraphase Amplifier Employing Derivative Superposition Linearization** .......... 68

#### 4.5 Chapter Summary ........................................................................ 70

### 5 Linearized CMOS Distributed Bidirectional Amplifier with Cross-Coupled Compensator .............................................................................. 71

#### 5.1 Introduction .................................................................................. 71

#### 5.2 Linearized CMOS Distributed Bidirectional Amplifier Circuit Design Analysis ......................................................... 71

#### 5.3 CMOS Cross-Coupled Compensator Transconductor as DA Gain Cell for Linearity Improvement and Enhanced Tunability ................................................. 75

#### 5.4 Effect of Nonlinear Drain Capacitance on DA Linearization Bandwidth .............................................................................. 80

#### 5.5 Transmission-Lines Multi-level Inductor Modeling in Transmission-Lines for Silicon Chip Area Reduction .............................................................................. 86

#### 5.6 DA Based Duplexer with Integrated Antenna on Silicon Replacing DA M-Derived Matching Network .............................................................................. 90

- **5.6.1 Varactor-Tuned LC Networks** ................................................................................. 92

#### 5.7 Chapter Summary ........................................................................ 92
### 6 Linearized CMOS Distributed Bidirectional Amplifier

**Silicon Chip Implementation**

<table>
<thead>
<tr>
<th>Section</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.1 Introduction</td>
<td>95</td>
</tr>
<tr>
<td>6.2 Linearized CMOS Bidirectional Distributed Amplifier High Frequency Layout Considerations</td>
<td>95</td>
</tr>
<tr>
<td>6.3 Silicon CMOS RF Multi-level Inductors Implementation</td>
<td>96</td>
</tr>
<tr>
<td>6.4 CMOS Bidirectional Distributed Amplifier Cross-Coupled Compensator Gain Cell Layout</td>
<td>98</td>
