Contents

Part I Angiogenesis

1 Genes and Regulatory Pathways Involved in Persistence of Dormant Micro-tumors ................................................................. 3
Nava Almog

2 The Host Support Niche as a Control Point for Tumor Dormancy: Implications for Tumor Development and Beyond .......... 19
Philip Hahnfeldt

3 Insights into the Regulation of Tumor Dormancy by Angiogenesis in Experimental Tumors .................................................. 37
Stefano Indraccolo

Part II Stem Cells and Signaling Pathways

4 Cancer Stem Cells and Tumor Dormancy .............................................. 55
Heiko Enderling

5 Regulation of Tumor Cell Dormancy by Tissue Microenvironments and Autophagy ................................................................. 73
Maria Soledad Sosa, Paloma Bragado, Jayanta Debnath, and Julio A. Aguirre-Ghiso

6 Tumor Dormancy, Oncogene Addiction, Cellular Senescence, and Self-Renewal Programs ..................................................... 91
David I. Bellovin, Bikul Das, and Dean W. Felsher

Part III Immune System

7 Multifaceted Kinetics of Immuno-Evasion from Tumor Dormancy .................................................................................. 111
Alberto d’Onofrio
8 Tumor Dormancy and Cancer Stem Cells: Two Sides of the Same Coin? ................................................................. 145
Sonja Kleffel and Tobias Schatton

9 Tumor Dormancy: Long-Term Survival in a Hostile Environment ........................................................................... 181
Bruno Quesnel

10 A Review of Mathematical Models of Cancer–Immune Interactions in the Context of Tumor Dormancy ...................... 201
Kathleen P. Wilkie

Part IV Mathematical Biosciences and Dynamical Systems Modeling

11 Regulation of Tumor Dormancy and Role of Microenvironment: A Mathematical Model ............................................. 237
Yangjin Kim and Khalid Boushaba

12 Seeing the Invisible: How Mathematical Models Uncover Tumor Dormancy, Reconstruct the Natural History of Cancer, and Assess the Effects of Treatment ............................................ 261
Leonid Hanin

Index ............................................................................................................................................................... 283
