## Contents

1 Introduction ...................................................... 1  
1.1 Wireless Ad Hoc Sensor Networks ......................... 2  
1.2 Contributions .................................................. 4  
1.3 Organization .................................................... 5  
References .......................................................... 6  

2 Statistical Techniques and Location Discovery .............. 9  
2.1 Statistical Techniques ......................................... 9  
2.2 Location Discovery ............................................. 10  
2.2.1 Definition .................................................. 11  
2.2.2 Classification .............................................. 11  
2.2.3 Ranging Technology ....................................... 12  
2.2.4 Ranged-Based Location Discovery ....................... 14  
2.2.5 Range-Free Location Discovery ......................... 17  
2.2.6 Performance, Topology Control, Coverage and Connectivity .................................................. 21  
2.3 Location Discovery Computational Complexity ............ 22  
2.4 Measurements, Error Sources and Modeling ............... 24  
2.4.1 Error Sources ............................................. 25  
2.4.2 Theoretical Error Models ................................. 26  
2.4.3 Real Data Error Models ................................... 28  
2.5 Distance Measurements and Experimental Platform ....... 34  
2.5.1 ILP-Based Instance Generation/Selection .............. 36  
References .......................................................... 37  

3 Location Discovery in Presence of Insufficient Number of Measurements .................................................. 41  
3.1 Motivation and Overview ...................................... 42  
3.2 Kernel Density Estimation-Based Offline Error Modeling .................................................. 46  
3.2.1 Model Construction ......................................... 46  
References .......................................................... 46
6 Techniques for Enabling Efficient Location Discovery

6.1 Motivation and Global Flow
6.1.1 Organization and Overview

6.2 Modeling
6.2.1 Distance Measurement Error Models
6.2.2 Location Error Models
6.2.3 Distance Calculation Error Model
6.2.4 Instrumented Environment Models
6.2.5 Mobility Models

6.3 Enabling Location Discovery
6.3.1 Atomic Multilateration
6.3.2 NLP Location Discovery
6.3.3 LD Partitioning and Iterative Fine-Tuning

6.4 Node Addition
6.4.1 Adding a Single Node
6.4.2 Adding Multiple Nodes Simultaneously

6.5 LD Infrastructure Engineering Change

6.6 Techniques for LD Physical Security
6.6.1 Trust Management and Data Authentication
   Using Constraint Manipulation
6.6.2 Privacy
6.6.3 LDI Security: Assignment and Scheduling

References

7 Localization Attacks and Countermeasures

7.1 Preliminaries
7.1.1 Localization Algorithm
7.1.2 Error Models
7.1.3 Attacker’s Objectives

7.2 Defense Algorithms for Atomic Multilateration
7.2.1 Defense Algorithm Organization
7.2.2 Defense Algorithm Objectives
7.2.3 Defense Algorithms Based on Linear Models
7.2.4 Perfect Attack Algorithm Results
7.2.5 Inefficiency of Outlier Detection Based on Linear Regression
7.2.6 Combined Minimum–Maximum Algorithm

7.3 Attack Algorithms for Atomic Multilateration
7.3.1 Structure of Attack Algorithm
7.3.2 Lowest Resistance Path Algorithm
7.3.3 Experimental Results
