Preface to the Fourth Edition	v
Foreword	vii
1 Introduction	1
1.1 The Photoelectric Effect	2
1.2 The Compton Effect	4
1.3 The Diffraction of Electrons	6
1.4 The Stern–Gerlach Experiment	7
2 Light Waves	11
2.1 Harmonic Plane Waves, Phase Velocity	11
2.2 Light Wave Incident on a Glass Surface	15
2.3 Light Wave Traveling through a Glass Plate	18
2.4 Free Wave Packet	20
2.5 Wave Packet Incident on a Glass Surface	25
2.6 Wave Packet Traveling through a Glass Plate	30
3 Probability Waves of Matter	32
3.1 de Broglie Waves	32
3.2 Wave Packet, Dispersion	32
3.3 Probability Interpretation, Uncertainty Principle	37
3.4 The Schrödinger Equation	46
3.5 Bivariate Gaussian Probability Density	47
3.6 Comparison with a Classical Statistical Description	50
4 Solution of the Schrödinger Equation in One Dimension	56
4.1 Separation of Time and Space Coordinates, Stationary Solutions	56
4.2 Stationary Scattering Solutions: Piecewise Constant Potential	58
4.3 Stationary Scattering Solutions: Linear Potentials	68
4.4 Stationary Bound States	72

5	One-Dimensional Quantum Mechanics:	
	Scattering by a Potential	78
5.1	Sudden Acceleration and Deceleration of a Particle	78
5.2	Sudden Deceleration of a Classical Phase-Space Distribution	83
5.3	Tunnel Effect	85
5.4	Excitation and Decay of Metastable States	86
5.5	Stationary States of Sharp Momentum	91
5.6	Free Fall of a Body	97
5.7	Scattering by a Piecewise Linear Potential	102
6	One-Dimensional Quantum Mechanics:	
	Motion within a Potential, Stationary Bound States	111
6.1	Spectrum of a Deep Square Well	111
6.2	Particle Motion in a Deep Square Well	112
6.3	Spectrum of the Harmonic-Oscillator Potential	116
6.4	Harmonic Particle Motion	119
6.5	Harmonic Motion of a Classical Phase-Space Distribution	126
6.6	Spectra of Square-Well Potentials of Finite Depths	129
6.7	Stationary Bound States in Piecewise Linear Potentials	131
6.8	Periodic Potentials, Band Spectra	133
7	Quantile Motion in One Dimension	141
7.1	Quantile Motion and Tunneling	141
7.2	Probability Current, Continuity Equation	143
7.3	Probability Current Densities of Simple Examples	147
7.4	Differential Equation of the Quantile Trajectory	149
7.5	Error Function	149
7.6	Quantile Trajectories for Simple Examples	150
7.7	Relation to Bohm's Equation of Motion	153
8	Coupled Harmonic Oscillators: Distinguishable Particles	157
8.1	The Two-Particle Wave Function	157
8.2	Coupled Harmonic Oscillators	159
8.3	Stationary States	167
9	Coupled Harmonic Oscillators: Indistinguishable Particles	170
9.1	The Two-Particle Wave Function for Indistinguishable Particles	170
9.2	Stationary States	173
9.3	Motion of Wave Packets	174
9.4	Indistinguishable Particles from a Classical Point of View	175

10 Wave Packet in Three Dimensions	185
10.1 Momentum	185
10.2 Quantile Motion, Probability Transport	187
10.3 Angular Momentum, Spherical Harmonics	191
10.4 Means and Variances of the Components of Angular Momentum	199
10.5 Interpretation of the Eigenfunctions of Angular Momentum	201
10.6 Schrödinger Equation	208
10.7 Solution of the Schrödinger Equation of Free Motion . . .	210
10.8 Spherical Bessel Functions	210
10.9 Harmonic Plane Wave in Angular-Momentum Representation	214
10.10 Free Wave Packet and Partial-Wave Decomposition	218
11 Solution of the Schrödinger Equation in Three Dimensions . .	225
11.1 Stationary Scattering Solutions	226
11.2 Stationary Bound States	229
12 Three-Dimensional Quantum Mechanics:	
Scattering by a Potential	232
12.1 Diffraction of a Harmonic Plane Wave. Partial Waves . . .	232
12.2 Scattered Wave and Scattering Cross Section	234
12.3 Scattering Phase and Amplitude, Unitarity, Argand Diagrams	244
13 Three-Dimensional Quantum Mechanics: Bound States	251
13.1 Bound States in a Spherical Square-Well Potential	251
13.2 Bound States of the Spherically Symmetric Harmonic Oscillator	257
13.3 Harmonic Particle Motion in Three Dimensions	265
13.4 The Hydrogen Atom	267
13.5 Kepler Motion in Quantum Mechanics	282
14 Hybridization	294
14.1 Introduction	294
14.2 The Hybridization Model	297
14.3 Highly Symmetric Hybrid States	302
15 Three-Dimensional Quantum Mechanics: Resonance Scattering	311
15.1 Scattering by Attractive Potentials	311
15.2 Resonance Scattering	314
15.3 Phase-Shift Analysis	314
15.4 Bound States and Resonances	322
15.5 Resonance Scattering by a Repulsive Shell	325

16 Coulomb Scattering	337
16.1 Stationary Solutions	337
16.2 Hyperbolic Kepler Motion: Scattering of a Gaussian Wave Packet by a Coulomb Potential	346
17 Spin	353
17.1 Spin States, Operators and Eigenvalues	353
17.2 Directional Distribution of Spin	355
17.3 Motion of Magnetic Moments in a Magnetic Field. Pauli Equation	359
17.4 Magnetic Resonance. Rabi's Formula	363
17.5 Magnetic Resonance in a Rotating Frame of Reference . . .	369
18 Examples from Experiment	373
18.1 Scattering of Atoms, Electrons, Neutrons, and Pions	374
18.2 Spectra of Bound States in Atoms, Nuclei, and Crystals . .	377
18.3 Shell-Model Classification of Atoms and Nuclei	380
18.4 Resonance Scattering off Molecules, Atoms, Nuclei, and Particles	387
18.5 Phase-Shift Analysis in Nuclear and Particle Physics	391
18.6 Classification of Resonances on Regge Trajectories	393
18.7 Radioactive Nuclei as Metastable States	395
18.8 Magnetic-Resonance Experiments	396
A Simple Aspects of the Structure of Quantum Mechanics	413
A.1 Wave Mechanics	413
A.2 Matrix Mechanics in an Infinite Vector Space	415
A.3 Matrix Representation of the Harmonic Oscillator	419
A.4 Time-Dependent Schrödinger Equation	421
A.5 Probability Interpretation	423
B Two-Level System	425
C Analyzing Amplitude	430
C.1 Classical Considerations: Phase-Space Analysis	430
C.2 Analyzing Amplitude: Free Particle	434
C.3 Analyzing Amplitude: General Case	439
C.4 Analyzing Amplitude: Harmonic Oscillator	439
D Wigner Distribution	446
E Gamma Function	450
F Bessel Functions and Airy Functions	455
G Poisson Distribution	460
Index	465

The Picture Book of Quantum Mechanics

Brandt, S.; Dahmen, H.D.

2012, XVI, 472 p., Hardcover

ISBN: 978-1-4614-3950-9
