

Contents

1	Introduction	1
1.1	Three Phases of Ultra-cold Matter	1
1.2	Historical Perspective	3
1.3	Book Overview	4
	References	6
 Part I Atomic Clouds		
2	Laser Cooling	9
2.1	Atom in the Laser Field	9
2.2	Laser Cooling Force	14
2.3	Doppler Limit	17
2.4	Magnetic Traps	18
2.4.1	Multipolar Field Configuration	19
2.4.2	Helmholtz Configuration	20
2.4.3	Ioffe Configuration	20
2.4.4	Anti-Helmholtz Configuration	21
2.5	Sisyphus Cooling	23
2.6	Evaporative Cooling	25
2.7	Sympathetic Cooling	29
	References	33
3	Wave Kinetic Approach	35
3.1	Wigner-Moyal Procedure	35
3.1.1	Quasi-distributions	36
3.1.2	Weyl Transformation	39
3.1.3	Wave Kinetic Equation	41
3.1.4	The Quasi-classical Limit	43
3.2	Center-of-Mass Equation	44
3.3	Wave Kinetic Description of the Laser-Atom Interaction	47
3.4	Two-Level Atom	48

3.5	Links with Dynamics and Statistics	50
3.5.1	Quasi-classical Limit	50
3.5.2	Momentum Diffusion and the Doppler Limit	51
3.6	Lambda Configuration	53
3.7	Two Coupled Radiative Transitions	55
3.8	Influence of a Blue-Detuned Pump	58
	References	60
4	Atomic Clouds	63
4.1	Atom-Atom Collisions	64
4.2	Feshbach Resonances	69
4.3	Collective Forces	74
4.4	Equilibrium Profiles	79
4.4.1	Qualitative Discussion	80
4.4.2	Quantitative Model	82
4.5	Coulomb Expansion	84
	References	88
5	Waves and Oscillations in Clouds	89
5.1	Hybrid Sound	89
5.1.1	Fluid Description	89
5.1.2	Kinetic Approach	91
5.2	Tonks-Dattner Modes	96
5.3	Large Scale Oscillations	99
5.3.1	The Centre-of-Mass Oscillation	99
5.3.2	Normal Modes	100
5.4	Nonlinear Mode Coupling	103
5.5	Quasi-linear Diffusion	107
5.6	Phaser, the Phonon Laser	110
	References	114
6	Photons in the Ultra-cold Gas	115
6.1	Optical Properties	116
6.2	Modulational Instability	118
6.3	Photon Bubbles	120
6.4	Roton Instability	125
6.5	Density Fluctuations	131
6.6	Collective Laser Scattering	135
	References	138
 Part II The Physics of Bose-Einstein Condensates		
7	Bose Einstein Condensates	143
7.1	Uniform Gas	144
7.2	Trapped Gas	145
7.3	Atom Correlations	149

7.4	Mean Field Approximation	153
7.5	Thomas-Fermi Approximation	155
7.6	Fluid and Kinetic Formulations.....	158
7.6.1	Quantum Fluid Equations	158
7.6.2	Wave Kinetic Equation	160
	References.....	161
8	Elementary Excitations in BECs	163
8.1	Sound Waves	163
8.2	Global Oscillations	165
8.3	Kinetic Processes	168
8.4	Landau Damping	169
8.5	Dynamical Instabilities.....	171
8.6	Wakefields in Bose-Einstein Condensates	174
	References.....	180
9	Solitons	181
9.1	Effective One-Dimensional Gross-Pitaevskii Equation	182
9.2	One-Dimensional Dark and Grey Solitons	184
9.2.1	Energy of the Soliton	187
9.3	The Inverse Scattering Transform	188
9.4	Interaction Between Two Dark Solitons	189
9.5	Bright Solitons	193
9.6	Dark Solitons in Harmonic Traps.....	194
9.7	The Soliton Gas	197
9.8	Solitons in Two Dimensions	200
	References.....	202
10	Quantum Field Theory of BECs	205
10.1	Bogoliubov Theory.....	205
10.2	BEC Depletion	209
10.3	Phonon Pair Creation.....	211
10.3.1	Time Refraction.....	211
10.3.2	Dynamical Casimir Effect.....	215
10.4	Acoustic Black Holes	217
10.4.1	Hawking Radiation	218
10.4.2	Effective Metric in a Condensate	219
10.4.3	Acoustic Hawking (Unruh) Radiation	220
	References.....	222
11	Superfluidity	225
11.1	Phonon Kinetics	225
11.2	Phonon Fluid Equations.....	228
11.3	Slow Perturbations in the Superfluid	230
11.4	Superfluid Currents.....	232
11.5	Phonon Landau Damping	234

11.6	Roton Excitation	235
11.6.1	Wave Kinetic Equation with Dipolar Interactions	236
11.6.2	Dispersion Relation.....	237
11.6.3	Roton Instability	238
	References.....	240
12	Rotating BECs	241
12.1	Quantum Vortices	241
12.2	Vortex Nucleation	244
12.3	Tkachenko Modes	245
12.4	Rossby Waves	246
12.5	Rossby-Tkatchenko Modes	252
12.6	Coupling with Photon OAM States.....	254
	References.....	256
13	Quantum Coherence	257
13.1	Atom Interferometry	257
13.2	Time Interferometry	259
13.3	Decoherence Processes	262
13.4	Gravitational Decoherence.....	265
13.5	Josephson Tunneling of a Condensate	269
	References.....	274
 Part III The Physics of Ultracold Plasmas		
14	Ultra-cold Plasmas	277
14.1	Different Plasma Regimes	278
14.2	Basic Plasma Properties.....	280
14.3	Ionization Processes	283
14.4	Single Particle Motion	285
14.5	Adiabatic Invariants	289
14.6	Plasma Equations.....	293
14.6.1	Klimontovitch Equation	294
14.6.2	Vlasov Equation	296
14.6.3	Kinetic Equations with Collisions	298
14.7	Fluid Equations	299
	References.....	302
15	Physics of Rydberg Plasmas	305
15.1	Plasma Expansion in the Collisional Regime	306
15.1.1	Free Diffusion	306
15.1.2	Ambipolar Diffusion Regime	308
15.1.3	Recombination in Volume.....	309
15.2	Collisionless Plasma Expansion	310
15.3	Strongly Coupled Ions	313
15.3.1	Ion-Neutral Coupling.....	313

15.3.2	Ion-Ion Coupling	316
15.3.3	Phase Transitions	317
15.4	Disorder Induced Heating	321
15.5	Quasi-equilibrium States	323
15.6	Rydberg Atoms	326
15.6.1	Basic Properties	326
15.6.2	Rydberg Blockade	329
15.7	Three-Body Recombination	334
	References	336
16	Waves in Rydberg Plasmas	339
16.1	Isotropic Plasmas	340
16.2	Polaritons and Slow Light	343
16.3	Ponderomotive Force	349
16.4	Electron Drift Instability	351
16.5	Drift Waves at Plasma Gradients	353
16.6	Waves in Magnetized Cold Plasmas	355
16.6.1	General Dispersion Relation	355
16.6.2	Parallel Propagation	358
16.6.3	Perpendicular Propagation	360
16.7	Waves in Expanding Plasmas	361
16.8	Waves in Strongly Coupled Plasmas	364
	References	366
17	Kinetic Theory of Waves	367
17.1	Kinetic Dispersion Relation	368
17.2	Electron Plasma Waves	371
17.3	Ion Acoustic Waves	373
17.4	Waves in Quantum Plasmas	374
17.5	Sound Waves in a Turbulent Plasma	378
17.5.1	Plasmon Kinetic Equation	378
17.5.2	Ion Oscillations	380
	References	381
18	Conclusions	383
Appendix	385
A.1	Atomic Structure	385
A.2	Quantum Theory of Radiative Transitions	389
Index	395
