1	Introduction	1
	Monte Carlo Method	1
	Random Number Generators	2
	Computer Languages	2
	Computer Simulation Software	3
	Basic Fundamentals	3
	Chapter Summaries	4
2	Random Number Generators	9
	Introduction	9
	Modular Arithmetic	9
	Linear Congruent Generators	10
	Generating Uniform Variates	11
	32-Bit Word Length	11
	Random Number Generator Tests	12
	Length of the Cycle	12
	Mean and Variance	12
	Chi Square	12
	Autocorrelation	13
	Pseudo Random Numbers	13
	Summary	14
3	Generating Random Variates	15
	Introduction	15
	Inverse Transform Method	15
	Continuous Variables	16
	Discrete Variables	16
	Accept-Reject Method	17
	Truncated Variables	17

Order Statistics	18
Sorted Values	19
Minimum Value	19
Maximum Value	19
Composition	21
Summation	21
Triangular Distribution	22
Empirical Ungrouped Data	24
Empirical Grouped Data	25
Summary	26
4 Generating Continuous Random Variates	27
Introduction	27
Continuous Uniform	27
Exponential	28
Standard Exponential	29
Erlang	30
Gamma	31
When $k < 1$	31
When $k > 1$	32
Beta	33
Standard Beta	33
Weibull	35
Normal Distribution	36
Hastings Approximation of $F(z)$ from z	36
Hastings Approximation of z from $F(z)$	37
Hastings Method	37
Convolution Method	38
Sine-Cosine Method	38
Lognormal	39
Chi-Square	40
Approximation Formula	41
Relation to Gamma	41
Generate a Random Chi-Square Variate	41
Student's t	42
Generate a Random Variate	42
Fishers' F	43
Summary	44
5 Generating Discrete Random Variates	45
Introduction	45
Discrete Arbitrary	45
Discrete Uniform	46
Bernoulli	47

- Binomial 48
 - When n is Small 48
 - Normal Approximation 49
 - Poisson Approximation 49
- Hyper Geometric 50
- Geometric 51
- Pascal 52
- Poisson 53
 - Relation to the Exponential Distribution 53
 - Generating a Random Poisson Variate 53
- Summary 55
- 6 Generating Multivariate Random Variates 57**
 - Introduction 57
 - Multivariate Discrete Arbitrary 57
 - Generate a Random Set of Variates 58
 - Multinomial 59
 - Generating Random Multinomial Variates 60
 - Multivariate Hyper Geometric 60
 - Generating Random Variates 61
 - Bivariate Normal 62
 - Marginal Distributions 62
 - Conditional Distributions 63
 - Generate Random Variates (x_1, x_2) 64
 - Bivariate Lognormal 65
 - Generate a Random Pair (x_1, x_2) 65
 - Multivariate Normal 66
 - Cholesky Decomposition 66
 - Generate a Random Set $[x_1, \dots, x_k]$ 67
 - Multivariate Lognormal 68
 - Cholesky Decomposition 68
 - Generate a Random Set $[x_1, \dots, x_k]$ 69
 - Summary 70
- 7 Special Applications 71**
 - Introduction 71
 - Poisson Process 71
 - Constant Poisson Process 72
 - Batch Arrivals 73
 - Active Redundancy 73
 - Generate a Random Variate 73
 - Standby Redundancy 75
 - Generate a Random Variate 75
 - Random Integers Without Replacement 76
 - Generate a Random Sequence 76

Poker	77
Generate Random Hands to Players A and B	77
Summary	78
8 Output from Simulation Runs	79
Introduction	79
Terminating System	80
Nonterminating Transient Equilibrium Systems	80
Identifying the End of the Transient Stage	81
Output Data	81
Partitions and Buffers	82
Nonterminating Transient Cyclical Systems	83
Output Data	83
Cyclical Partitions and Buffers	84
Other Models	84
Forecasting Database	84
Forecast and Replenish Database	85
Summary	90
9 Analysis of Output Data	91
Introduction	91
Variable Type Data	92
Proportion Type Data	92
Analysis of Variable Type Data	92
Sample Mean and Variance	93
Confidence Interval of μ when x is Normal	93
Approximate Confidence Interval of μ when x is Not Normal	94
Central Limit Theorem	94
When Need More Accuracy	96
Analysis of Proportion Type Data	96
Proportion Estimate and Its Variance	97
Confidence Interval of p	97
When Need More Accuracy	98
Comparing Two Options	100
Comparing Two Means when Variable Type Data	101
Comparing x_1 and x_2	101
Confidence Interval of $(\mu_1 - \mu_2)$ when Normal Distribution	101
Significant Test	102
When $\sigma_1 = \sigma_2$	102
When $\sigma_1 \neq \sigma_2$	103
Approximate Confidence Interval of $(\mu_1 - \mu_2)$ when Not Normal	103
As Degrees of Freedom Increases	104

- Comparing the Proportions Between Two Options 105
 - Comparing p_1 and p_2 105
 - Confidence Interval of $(p_1 - p_2)$ 106
 - Significant Test 107
- Comparing k Means of Variable Type Data 108
 - One-Way Analysis of Variance 108
- Summary 112
- 10 Choosing the Probability Distribution from Data 113**
 - Introduction 113
 - Collecting the Data 114
 - Test for Independence 114
 - Autocorrelation 114
 - Some Useful Statistical Measures 115
 - Location Parameter 115
 - Candidate Probability Distributions 116
 - Transforming Variables 116
 - Transform Data to $(0,1)$ 116
 - Transform Data to $(x \geq 0)$ 117
 - Candidate Continuous Distributions 117
 - Continuous Uniform 117
 - Normal 117
 - Exponential 117
 - Lognormal 118
 - Gamma 118
 - Beta 118
 - Weibull 118
 - Some Candidate Discrete Distributions 119
 - Discrete Uniform 119
 - Binomial 119
 - Geometric 119
 - Pascal 120
 - Poisson 120
 - Estimating Parameters for Continuous Distributions 120
 - Continuous Uniform 120
 - Normal Distribution 121
 - Exponential 121
 - Lognormal 122
 - Gamma 122
 - Beta 123
 - Estimating Parameters for Discrete Distributions 123
 - Discrete Uniform 123
 - Binomial 124
 - Geometric 125

- Pascal 125
- Poisson 125
- Q-Q Plot 126
- P-P Plot 132
 - Adjustment for Ties 135
- Summary 135
- 11 Choosing the Probability Distribution When No Data 137**
 - Introduction 137
 - Continuous Uniform 137
 - Triangular 139
 - Beta 139
 - Lognormal 141
 - Weibull 142
 - Solving for k_1 144
 - Solving for k_2 144
 - Summary 145
- Appendix A 147**
- Appendix B 153**
- Appendix C 161**
