Contents

1 Introduction ............................................................................................................ 1
  1.1 Striving for Artificial Intelligence ................................................................. 1
  1.2 Historical Concepts of Intelligent Robots ..................................................... 3
    1.2.1 Ancient Automatons ... .............................................................. 3
  1.3 Hollywood’s Views on Robots and Artificial Intelligence ....................... 6
  1.4 What Are Artificial Cognitive Systems and Why Do We Need Them? ........ 7
  1.5 Layout of the Book ....................................................................................... 8

2 The Information Continuum .............................................................................. 11
  2.1 Information Flow Within a Synthetic Continuum ...................................... 12
  2.2 Information Processing Models .................................................................. 14
  2.3 Discussion ................................................................................................... 15

3 The Psychology of Artificial Intelligence ........................................................... 17
  3.1 Artificial Psychology ..................................................................................... 17
  3.2 Artificial Cognition: What Does It Mean to Be Cognitive? ......................... 19
  3.3 Artificial Intuition: What Does It Mean to Be Intuitive? ............................ 19
  3.4 Human Versus Machine Emotions ............................................................... 20
    3.4.1 Basic Emotions ................................................................................ 21
  3.5 Human Perception of Artificial Intelligence ................................................. 22
  3.6 Human Acceptance of Artificial Intelligence .............................................. 22
  3.7 Artificial Intelligence Perception Design .................................................... 23
  3.8 The Psychology of Human-Robot Collaboration ......................................... 24
  3.9 Discussion ................................................................................................... 26

4 Cognitive Intelligence and the Brain: Synthesizing Human Brain Functions 27
  4.1 The Artificial Cognitive Neural Framework (ACNF) Architecture ............ 27
    4.1.1 Cognitrons ...................................................................................... 29

6.4 Artificial Metamemory: Cognitive Understanding and Learning ......................................................... 89
6.4.1 Cognitive Visibility and Governance ................................................................. 91
6.5 Metacognitive and Metamemory Structures ........................................................................... 92
6.6 Extended Metacognition: Artificial Locus of Control Within the SELF ................................................. 93
6.6.1 Artificial Locus of Control .................................................................................. 95
6.6.2 Constructivist Learning .................................................................................... 96
6.6.3 Bounded Conceptual Reality (Cognitive Economy) ........................................ 97
6.7 Cognitive System Management ....................................................................................... 99
6.7.1 SELF Memory Management ............................................................................. 100
6.7.2 SELF Learning Management ........................................................................... 101
6.7.3 SELF Decision Management ........................................................................... 102
6.7.4 SELF Rules Management ................................................................................ 103
6.7.5 SELF Cognitron Management ....................................................................... 104
6.8 Discussion .................................................................................................................... 107

7 Learning in an Artificial Cognitive System ................................................................................. 109
7.1 Autonomous Heterogeneous Level Learning Environment ......................................................... 110
7.2 Autonomous Genetic Learning Environments .............................................................................. 111
7.3 SELF Emotional Learning .............................................................................................. 112
7.4 Decision Analytics in Real-Time (DART) .................................................................................. 113
7.4.1 Case-Based DART ............................................................................................. 113
7.5 Cognitronic Learning ......................................................................................................... 115
7.5.1 Cognitron Autonomy ......................................................................................... 115
7.5.2 Cognitronic Cognition ....................................................................................... 116
7.5.3 Conscious Cognitrons ....................................................................................... 116
7.5.4 Autonomous Learning Mechanisms ...................................................................... 117
7.5.5 Autonomous Behavior Learning .......................................................................... 118
7.5.6 Behavior Learning and Human Interaction .................................................................. 120
7.6 DART Occam Learning ...................................................................................................... 123
7.6.1 DART Pattern Discovery .................................................................................. 123
7.6.2 DART Pattern Discovery Concepts ...................................................................... 125
7.6.3 DART Computational Mechanics and Occam Learning ........................................ 127
7.7 DART Constructivist Learning Concepts .............................................................................. 129
7.7.1 Adaptation of Constructivist Learning Concepts to the SELF ..................................... 132
7.8 Discussion ....................................................................................................................... 133

8 Synthetic Reasoning .................................................................................................................. 135
8.1 Human Reasoning Concepts ................................................................................................. 135
8.1.1 Human Thinking ................................................................................................. 136
8.1.2 Modular Reasoning ........................................................................................... 136
8.1.3 Distributed Reasoning ....................................................................................... 136
8.1.4 Collaborative Reasoning ................................................................................... 137
8.2 Types of Reasoning ................................................................. 138
  8.2.1 Logical Reasoning ............................................................. 138
  8.2.2 Humans and Inductive/Deductive Reasoning ..................... 139
  8.2.3 Moral and Ethical Reasoning ........................................... 139
8.3 SELF Reasoning ................................................................. 140
8.4 Abductive Reasoning: Possibilistic, Neural Networks ............. 141
  8.4.1 Artificial Creativity .......................................................... 141
  8.4.2 Creativity Through Problem Solving ................................. 141
  8.4.3 Dialectic Reasoning Framework ....................................... 142
  8.4.4 FuNN Creating DAS .......................................................... 146
  8.4.5 DAS Reasoning Approximation ....................................... 147
  8.4.6 Cognitron Archetype Descriptions .................................... 148
  8.4.7 The Fuzzy, Unsupervised, Active Resonance Theory,
       Neural Network (FUNN) ...................................................... 150
8.5 Cognitron Theory ................................................................. 151
  8.5.1 Intelligent Software Agent Definition ............................... 152
  8.5.2 Weak Intelligent Software Agents ................................... 153
  8.5.3 Intelligent Software Agents ............................................. 153
  8.5.4 Software Agents and Intelligence .................................... 154
  8.5.5 The Cognitron ................................................................. 155
8.6 Knowledge Relativity and Reasoning .................................... 157
  8.6.1 Knowledge Relativity ....................................................... 158
  8.6.2 Knowledge Relativity Threads ......................................... 161
  8.6.3 Frameworks for Contextual Knowledge Refinement .......... 164
8.7 Knowledge Density Mapping Within a SELF .................................. 165
  8.7.1 Knowledge Density Mapping: Pathway to SELF Metacognition .................................................. 166
  8.7.2 Analytical Competency ................................................... 168
8.8 Discussion ................................................................. 171
9 Artificial Cognitive System Architectures .............................. 173
  9.1 Cognitronic Artificial Consciousness Architecture ............... 174
    9.1.1 Synthetic Neocortex Adaptation .................................... 174
    9.1.2 Cognitronic Information Flow ....................................... 176
    9.1.3 Artificial Abductive Reasoning ....................................... 179
    9.1.4 Elementary Artificial Occam Abductivity ......................... 180
    9.1.5 Synthesis of Artificial Occam Abduction ......................... 184
    9.1.6 Artificial Occam Abductive Hypothesis
       Evaluation Logic .................................................................... 185
    9.1.7 SELF’s Overall Cognitive Cycle ..................................... 187
    9.1.8 SELF Sensory Environment .......................................... 189
    9.1.9 ISAAC’s Lower Brain Function Executives ....................... 191
    9.1.10 ISAAC as an Artificial Central Nervous System .............. 193
  9.2 The Cognitive, Interactive Training Environment (CITE) ........ 197
    9.2.1 SELF Cognitive Resiliency ............................................ 198
    9.2.2 SELF Cognitive Resiliency and Memory Development ....... 200
9.2.3 SELF Procedural Memory Development
and Resiliency ........................................................................... 200

9.3 Discussion .................................................................................. 201

10 Artificial Cognitive Software Architectures ..................................... 203
10.1 Artificial Prefrontal Cortex Genesis ................................................. 206
10.2 Cognitron Service Instantiation ..................................................... 208
10.3 Cognitron Personalities ................................................................. 210
10.4 Cognitron Flexibility ..................................................................... 212
   10.4.1 Mediator Service .................................................................. 212
   10.4.2 Data Acquisition Service ....................................................... 213
   10.4.3 Signal Processing Service ....................................................... 214
   10.4.4 The Data Flow Service ......................................................... 215
   10.4.5 Alerts and Alarms Service ....................................................... 215
   10.4.6 Health Assessment Service .................................................... 216
   10.4.7 Inference Engine Service ....................................................... 217
   10.4.8 Prognostic Service ............................................................... 219
   10.4.9 Decision Reasoning Service ................................................... 220
   10.4.10 Histories Service ................................................................ 220
   10.4.11 Configuration Service ........................................................ 221
   10.4.12 Human Systems Interface Service ....................................... 221
   10.4.13 Proxy Service ..................................................................... 221
10.5 SELF Service Node Strategies ..................................................... 222
10.6 Discussion .................................................................................... 222

11 SELF Physical Architectures .......................................................... 223
11.1 The Reconfigurable Advanced Rapid-Prototyping Environment (RARE) ................................................................. 223
11.2 Physically Modularity and Scalability ........................................... 225
11.3 Discussion .................................................................................... 226

12 Cyber Security Within a Cognitive Architecture .............................. 229
12.1 SELF Cognitive Security Architecture .......................................... 230
12.2 SELF Cognitive Security Architecture: Threat .............................. 233
12.3 SELF Cognitive Security Architecture: Vulnerability .................... 233
12.4 SELF PENLPE Security Management Ontology ............................ 234
12.5 SELF Security Management: Self-Diagnostics and Prognostics ......... 235
12.6 PENLPE Prognostic Security Management (PSM) ......................... 237
12.7 Abductive Logic and Emotional Reasoners .................................... 237
12.8 Self-Soothing Mechanisms ......................................................... 238
   12.8.1 SELF Self-Soothing: Acupressure ......................................... 238
   12.8.2 SELF Self-Soothing: Deep Breathing .................................... 238
   12.8.3 SELF Self-Soothing: Amplification of the Feeling ................. 239
   12.8.4 SELF Self-Soothing: Imagery .............................................. 239
   12.8.5 SELF Self-Soothing: Mindfulness ....................................... 240
   12.8.6 SELF Self-Soothing: Positive Psychology ............................ 240
12.9 SELF Internal Information Encryption ........................................ 240
12.10 Discussion .................................................................................... 242

13 Conclusions and Next Steps ............................................................. 243
  13.1 The Future SELF .......................................................................... 244
  13.2 Zeus: A Self-Evolving Artificial Life Form .................................. 244
  13.3 Early Research into Cognitrons: Adventures in Cyberspace ...... 246
  13.4 What’s Next? ................................................................................ 246

Acronyms ......................................................................................................... 249
