## Part I Preliminaries

<b>1</b>	<b>Computer Arithmetic and Fundamental Concepts of Computation</b> . . . . .	7
1.1	Mathematical Problems and Computability of Solutions . . . . .	7
1.2	Representation and Computation Error . . . . .	10
1.3	Error Accumulation and Catastrophic Cancellation . . . . .	12
1.4	Perspectives on Error Analysis: Forward, Backward, and Residual-Based . . . . .	18
1.4.1	Backward Error Analysis . . . . .	21
1.4.2	Condition of Problems . . . . .	23
1.4.3	Residual-Based A Posteriori Error Analysis . . . . .	26
1.5	Numerical Properties of Algorithms . . . . .	29
1.6	Complexity and Cost of Algorithms . . . . .	32
1.7	Notes and References . . . . .	34
	Problems . . . . .	35
<b>2</b>	<b>Polynomials and Series</b> . . . . .	43
2.1	Polynomials, Their Bases, and Their Roots . . . . .	44
2.1.1	Change of Polynomial Bases . . . . .	46
2.1.2	Operations on Polynomials . . . . .	47
2.2	Examples of Polynomial Bases . . . . .	48
2.2.1	Shifted Monomials . . . . .	48
2.2.2	The Newton Basis . . . . .	52
2.2.3	Chebyshev Polynomials . . . . .	53
2.2.4	Other Orthogonal Polynomials . . . . .	55
2.2.5	The Clenshaw Algorithm for Evaluating Polynomials Expressed in Orthogonal Bases . . . . .	56
2.2.6	Lagrange Polynomials . . . . .	58
2.2.7	Bernstein–Bézier Polynomials . . . . .	62
2.3	Condition Number for the Evaluation of Polynomials . . . . .	63

2.4	Pseudozeros	70
2.5	Partial Fractions	72
2.6	Formal Power Series Algebra	75
2.6.1	Multiplication of Series and the Cauchy Convolution	76
2.6.2	Division of Series	79
2.6.3	Differentiation and Integration	80
2.6.4	The Algebra of Series	81
2.6.5	The Exponential of a Series	81
2.7	A Partial Fraction Decomposition Algorithm	
	Using Local Taylor Series	84
2.8	Asymptotic Series in Scientific Computation	88
2.9	Chebyshev Series and Chebfun	91
2.10	Notes and References	94
	Problems	95
<b>3</b>	<b>Rootfinding and Function Evaluation</b>	<b>105</b>
3.1	Function Evaluation	106
3.1.1	Condition Number for Function Evaluation	107
3.1.2	Conditioning of Real and Imaginary Parts Separately	110
3.2	Rootfinding	111
3.2.1	The Condition Number of a Root	112
3.2.2	Newton's Method	113
3.2.3	Wilkinson's First Example Polynomial	117
3.2.4	Backward Error Analysis Again	120
3.3	Transcendental Functions	121
3.3.1	Evaluation of Transcendental Functions	122
3.3.2	Roots of Transcendental Functions	131
3.4	Best Rational Approximation	133
3.5	Other Rootfinding Methods	138
3.5.1	Halley's Method	138
3.5.2	The Secant Method	141
3.5.3	Inverse Quadratic Interpolation	143
3.5.4	Taking a Step Back	145
3.6	The Multivariate Case	147
3.7	Chebfun for Evaluation and Rootfinding	150
3.8	Notes and References	154
	Problems	155
<b>Part II Numerical Linear Algebra</b>		
<b>4</b>	<b>Solving <math>Ax=b</math></b>	<b>167</b>
4.1	Why Not Solve Linear Systems Exactly?	169
4.2	Solving Unitary or Orthogonal Systems	171
4.3	Solving Triangular Systems	173
4.4	Factoring as a Step Toward Solution	176

4.5	The QR Factoring	177
4.5.1	Classical (Unstable) Gram–Schmidt	178
4.5.2	Modified Gram–Schmidt Orthogonalization	182
4.5.3	Householder Reflections	185
4.5.4	Numerical Stability of the QR Algorithms	186
4.5.5	Solving Overspecified Systems with the QR Factoring	190
4.6	SVD and Condition Number	194
4.6.1	The Effect of Data Error in $\mathbf{b}$	196
4.6.2	Conditioning, Equilibration, and the Determinant	199
4.6.3	A Naive Way to Compute the SVD	202
4.6.4	Using Preexisting Software to Compute the SVD	202
4.6.5	Solving $\mathbf{Ax} = \mathbf{b}$ with the SVD	204
4.6.6	The SVD and Overspecified Systems	205
4.6.7	Other Applications of the SVD	206
4.7	Solving $\mathbf{Ax}=\mathbf{b}$ with the LU Factoring	211
4.7.1	Instability of Elimination Without Pivoting	213
4.7.2	Numerical Stability of Gaussian Elimination	217
4.8	Why Not Use $\mathbf{A}^{-1}$ ?	219
4.9	Relative Costs of the Different Factorings	222
4.10	Solving Nonlinear Systems	225
4.11	Notes and References	228
	Problems	228
<b>5</b>	<b>Solving <math>\mathbf{Ax} = \lambda \mathbf{x}</math></b>	<b>239</b>
5.1	Generalized Eigenvalues	239
5.2	Schur Factoring Versus Jordan Canonical Form	244
5.3	Algorithms for Eigenvalue Problems	248
5.3.1	Simple Iterative Methods	248
5.3.2	The QR Algorithm for $\mathbf{Ax} = \lambda \mathbf{x}$	251
5.4	Condition Number of a Simple Eigenvalue	254
5.5	Pseudospectra and Eigenvalue Conditioning	255
5.5.1	Spectra and Pseudospectra	255
5.5.2	Powers and Exponentials with Spectra and Pseudospectra	257
5.6	Notes and References	263
	Problems	264
<b>6</b>	<b>Structured Linear Systems</b>	<b>269</b>
6.1	Taking Advantage of Structure	269
6.2	Real Symmetric Positive-Definite Matrices	273
6.3	Banded Matrices	275
6.4	Block Structure	276
6.5	Other Structured and Sparse Matrices	277

6.6	Structured Backward Error and Conditioning	283
6.6.1	Structured Backward Errors and Componentwise Bounds	283
6.6.2	Structured Backward Error for Matrices with Correlated Entries	288
6.6.3	Structured Backward Error for Eigenvalue Problems	292
6.7	Cauchy Matrices	298
6.8	Notes and References	300
	Problems	300
<b>7</b>	<b>Iterative Methods</b>	<b>307</b>
7.1	Iterative Refinement and Structured Backward Error	307
7.2	What Could Go Wrong with an Iterative Method?	314
7.3	Some Classical Variations	315
7.4	Large Eigenvalue Problems	317
	Problems	323
 <b>Part III Interpolation, Differentiation, and Quadrature</b>		
<b>8</b>	<b>Polynomial and Rational Interpolation</b>	<b>331</b>
8.1	Lagrange Interpolation	332
8.2	Interpolating from Values of a Function and Its Derivatives (Hermite Interpolation)	337
8.2.1	Rootfinding for Polynomials Expressed in Hermite Interpolational Bases	340
8.2.2	Derivation of the Barycentric Forms of the Hermite Interpolation Polynomial	345
8.2.3	Computing the Generalized Barycentric Weights	350
8.3	Conditioning of the Generalized Barycentric Weights	352
8.4	Condition Number of the First Barycentric Form of the Lagrange Interpolating Polynomial	353
8.5	Error in Polynomial Interpolation	357
8.6	Interpolating in Other Polynomial Bases	361
8.7	Rational Interpolation with Known Denominator	364
8.8	Numerical Accuracy of the Second Barycentric Form	368
8.9	Piecewise Interpolation	369
8.9.1	A Cubic Spline	370
8.9.2	The Condition Number of a Spline Interpolant	374
8.10	Chebfun and Interpolation	376
8.11	Notes and References	378
	Problems	382

<b>9</b>	<b>The Discrete Fourier Transform</b>	403
9.1	The Fourier Transform via Interpolation	403
9.2	Chebfun and the FFT	414
9.3	Notes and References	416
	Problems	416
<b>10</b>	<b>Numerical Integration</b>	419
10.1	Conditioning of Quadrature	423
10.2	Equally Spaced Partitions and Spectral Methods	426
10.2.1	Simpson's Rule	428
10.2.2	Practical Error Estimation	429
10.2.3	Extrapolation Methods	430
10.2.4	Spectral Accuracy for Smooth Periodic Functions	432
10.3	Adaptive Quadrature	433
10.4	Gaussian Quadrature	437
10.4.1	Gauss–Legendre Integration (Case I)	438
10.4.2	Gauss–Chebyshev Integration (Case II)	441
10.5	Clenshaw–Curtis Quadrature	445
10.6	The Effect of Derivative Singularities and of Infinite Intervals	446
10.7	A Diversion with Chebfun	448
10.8	Oscillatory Integrands	453
10.9	Multidimensional Integration	457
10.10	Notes and References	458
	Problems	459
<b>11</b>	<b>Numerical Differentiation and Finite Differences</b>	463
11.1	Conditioning	463
11.2	Polynomial Formulæ and Differentiation Matrices	465
11.2.1	Structured Condition Number for Differentiation of Polynomials	468
11.2.2	Differentiation Matrices for Lagrange Bases	469
11.2.3	A Detailed Derivation of the Differentiation Matrix for the Hermite Interpolation Polynomial	470
11.2.4	Differentiation Matrix Examples	475
11.3	Complex Nodes	477
11.3.1	The Differentiation Matrices on Roots of Unity	478
11.3.2	A Surprisingly Simple Rule	479
11.4	A Backward Error Interpretation of Simple Finite Differences	482
11.5	Finite Differences for Higher Derivatives	485
11.6	Compact Finite Differences	487
11.7	Automatic Differentiation	491
11.8	Smoothing	492
11.9	Multidimensional Finite Differences	496
11.10	Notes and References	496
	Problems	498

**Part IV Differential Equations**

<b>12</b>	<b>Numerical Solution of ODEs</b>	509
12.1	Solving Initial-Value Problems with <code>ode45</code> in MATLAB	511
12.2	The Residual	518
12.2.1	Residual, Defect, and Deviation	519
12.2.2	A Closer Look at Computing the Residual	522
12.3	Conditioning of IVP	525
12.3.1	Lipschitz Constants	526
12.3.2	Condition via the Variational Equation	527
12.3.3	Condition Analysis Based on the Gröbner–Alexeev Approach	536
12.3.4	A Crude Practical Estimate of the Condition Number	540
12.4	An Extended Example: The Restricted Three-Body Problem	541
12.5	Structured Backward Error for ODE	548
12.6	What Good are Numerical Solutions of Chaotic Problems?	550
12.7	Solution of Stiff Problems	555
12.8	Event Location	559
12.9	More on Mass Matrices: DAE and Singular Perturbation Problems	566
12.10	Which Interpolant, Which Residual?	567
12.11	Singularity	568
12.11.1	Pole-Vaulting	570
12.11.2	Other Kinds of Singularities	570
12.12	Notes and References	573
	Problems	574
<b>13</b>	<b>Numerical Methods for ODEs</b>	585
13.1	Euler’s Method and Basic Concepts	586
13.2	Error Estimation and Control	588
13.2.1	The Residual	589
13.2.2	Local Error	593
13.2.3	Convergence and Consistency of Methods	598
13.3	Stiffness and Implicitness	600
13.4	Taylor Series Method	605
13.4.1	Implicit Taylor Series Methods	612
13.4.2	Final Remarks on Taylor Series Methods	613
13.5	Runge–Kutta Methods	615
13.5.1	Examples of Second-, Third-, and Fourth-Order RK Methods	615
13.5.2	Generalization and Butcher Tableaux	619
13.5.3	How to Construct a Discrete RK Method	621
13.5.4	Investigation of Continuous Explicit Runge–Kutta Methods	623
13.5.5	Order Conditions with Trees	627

13.5.6	Solving the Order Conditions .....	634
13.5.7	Implicit RK Methods .....	637
13.6	Multistep Methods .....	648
13.6.1	Stability of LMM .....	652
13.6.2	More Stability Issues .....	654
13.6.3	Variable Step-Size Multistep Methods, Derived Using Contour Integral Methods .....	656
13.6.4	Adams' Methods .....	658
13.7	The Method of Modified Equations .....	662
13.7.1	Correlations and Structure in the Residual .....	662
13.7.2	Finding a Modified Equation .....	665
13.8	Geometric Integration .....	671
13.9	Other Methods .....	675
13.10	Notes and References .....	676
	Problems .....	678
<b>14</b>	<b>Numerical Solutions of Boundary Value Problems .....</b>	<b>695</b>
14.1	Introduction .....	695
14.2	Conditioning .....	697
14.3	A Method to Solve BVPODE .....	702
14.3.1	Solution on a Uniform Mesh .....	707
14.3.2	Solution on an Adapted Mesh .....	707
14.4	How Does It Work, and Why Does It Work? .....	710
14.4.1	Equidistribution, the Theory .....	711
14.4.2	Solution of the Minimax Problem .....	715
14.5	Superconvergence .....	717
14.6	Nonlinear Problems and Quasilinearization .....	718
14.7	Notes and References .....	724
	Problems .....	725
<b>15</b>	<b>Numerical Solution of Delay DEs .....</b>	<b>729</b>
15.1	The Residual, or Defect .....	735
15.2	State-Dependent Delays: <code>ddesd</code> Versus <code>dde23</code> .....	738
15.3	Conditioning .....	742
15.4	Neutral Equations .....	747
15.5	Chebfun and Delay Differential Equations .....	748
15.6	Notes and References .....	751
	Problems .....	752
<b>16</b>	<b>Numerical Solution of PDEs .....</b>	<b>755</b>
16.1	The Method of Lines .....	756
16.1.1	The Method of Lines Using Spectrally Accurate Spatial Mesh .....	756
16.1.2	Compact Finite Differences and the Method of Lines .....	762
16.2	Conditioning of PDEs .....	766

16.3	The Transverse Method of Lines .....	767
16.4	Using PDEPE in MATLAB .....	773
16.5	Poisson's Equation and the FFT .....	778
16.6	Reaction–Diffusion Equations and Turing Patterns .....	780
16.7	Concluding Remarks .....	787
16.8	Notes and References .....	788
	Problems .....	789
<b>Part V Afterword</b>		
<b>Part VI Appendices</b>		
<b>A</b>	<b>Floating-Point Arithmetic</b> .....	799
	A.1 Number Representation .....	800
	A.2 Operations and Roundoff .....	809
	Problems .....	811
<b>B</b>	<b>Complex Numbers</b> .....	813
	B.1 Elementary Complex Arithmetic .....	813
	B.2 Polar Coordinates and the Two-Argument arctan Function .....	814
	B.3 The Exponential Function .....	815
	B.4 The Natural Logarithm .....	815
	B.5 The Complex Sign Functions .....	817
	B.6 Trigonometric Functions and Hyperbolic Functions .....	818
	B.7 The Residue Theorem .....	818
	Problems .....	819
<b>C</b>	<b>Vectors, Matrices, and Norms</b> .....	821
	C.1 Notation and Structure of Matrices .....	821
	C.2 Norms .....	822
	C.3 Derivation of the Normal Equations .....	831
	C.4 The Schur Complement .....	831
	C.5 Eigenvalues .....	832
	References .....	833
	<b>Index</b> .....	857
