Contents

Part I  Introduction

1  A Road Map for Computational Surgery: Challenges and Opportunities .......................................................... 3
   B.L. Bass and M. Garbey

Part II  Computer Assisted Management of Disease and Surgery

   E. Brian Butler, Paul E. Sovelius, and Nancy Huynh

3  Stereotactic Body Radiotherapy/Stereotactic Ablative Body Radiotherapy for Lung Cancer .......................... 37
   Hua Ren, Shanda Blackmon, and Bin S. Teh

4  Computer-Aided Management in Scoliosis Surgery ................. 57
   Tran Nguyen Hoang Thi Tho, Truong Quang Dang Khoa, Vo Van Thanh, Lawrence H. Le, and Vo Van Toi

5  Computational Modeling of Breast Conserving Surgery (BCS) Starting from MRI Imaging ............................ 67
   D. Thanoon, M. Garbey, and B.L. Bass

Part III  Image Processing and Diagnostics

6  A Statistical Framework for Biomarker Analysis and HR-MAS 2D Metabolite Identification .......................... 89
   Akram Belghith, Christophe Collet, and Jean-Paul Armspach
7  Hardware and Performance Considerations for Computational Medicine .............................................. 113
Edgar Gabriel, Rahma Smaoui, Vishwanath Venkatesan, and Shishir Shah

Part IV  Image Driven Intervention and Robotic

8  Cardiovascular Imaging, Navigation and Intervention: Hybrid Imaging and Therapeutics ................................. 125
Daynene Vykoukal, Ponraj Chinnadurai, and Mark G. Davies

9  Towards Automatic Computer-Aided Planning in Arthroplasty Surgery by Innovative Methods for Processing the Bone Surface Models ................................................. 149
Pietro Cerveri, Mario Marchente, Norberto Confalonieri, Alfonso Manzotti, and Guido Baroni

10 Robotic Assisted Lobectomy for Lung Cancer ............................ 161
Min P. Kim

11 Robot Interaction Control in Medicine and Surgery: Original Results and Open Problems ........................................ 169
B. Bayle, M. Joinié-Maurin, L. Barbé, J. Gangloff, and M. de Mathelin

12 Control Issues and Possible Solutions in Robotized Flexible Endoscopy ........................................................ 193
Florent Nageotte, Bérengère Bardou, Philippe Zanne, Laurent Ott, and Michel de Mathelin

13 Beating Heart Surgery: Comparison of Two Active Compensation Solutions for Minimally Invasive Coronary Artery Bypass Grafting .............................................. 203
Julien Gagne, Wael Bachta, Pierre Renaud, Olivier Piccin, Édouard Laroche, and Jacques Gangloff

Part V  Modeling, Simulation and Experimental Data

V.1 Cardiovascular

14 Segmentation and Blood Flow Simulations of Patient-Specific Heart Data ........................................................ 213
Dimitris Metaxas, Scott Kulp, Mingchen Gao, Shaoting Zhang, Zhen Qian, and Leon Axel
15 Assessment of Hemodynamics in DeBakey Type III Aortic Dissections for Planning Surgical Interventions and to Understand Post-Treatment Changes ........................................... 241
Christof Karmonik, Jean Bismuth, Mark G. Davies, Dipan J. Shah, and Alan B. Lumsden

16 Three-Dimensional Numerical Simulation of Plaque Formation in Arteries ................................................................. 257
N. Filipovic, N. Meunier, D. Fotiadis, O. Parodi, and M. Kojic

17 Rule-Based Simulation of Vein Graft Remodeling ...................... 265
Minki Hwang, Marc Garbey, Scott A. Berceli, and Roger Tran-Son-Tay

18 Transport in Nanoconfinement and Within Blood Vessel Wall ........ 273
A. Ziemys, N. Filipovic, M. Ferrari, and M. Kojic

V.2 Cancer

19 Some Models for the Prediction of Tumor Growth: General Framework and Applications to Metastases in the Lung .... 289
Thierry Colin, Angelo Iollo, Damiano Lombardi, Olivier Saut, Françoise Bonichon, and Jean Palussière

20 Quantifying the Role of Anisotropic Invasion in Human Glioblastoma ................................................................. 315
R. Sodt, R. Rockne, M.L. Neal, I. Kalet, and K.R. Swanson

21 A Mathematical Model for Growing Metastases on Oncologists’s Service ......................................................... 331
D. Barbolosi, A. Benabdallah, S. Benzekry, J. Ciccolini, C. Faivre, F. Hubert, F. Verga, and B. You

V.3 Epilepsy

22 Neocortical Simulation for Epilepsy Surgery Guidance: Localization and Intervention ........................................... 339
William W. Lytton, Samuel A. Neymotin, Jason C. Wester, and Diego Contreras

V.4 Bone

23 Calculation of the Discrete Effective Stiffness of Cancellous Bone by Direct Mechanical Simulations .................. 351
Ralf Schneider and Michael M. Resch
Part VI  Training and Performance Analysis

24  Robotics as a Tool for Training and Assessment of Surgical Skill ..... 365
Marcia K. O’Malley, Ozkan Celik, Joel C. Huegel,
Michael D. Byrne, Jean Bismuth, Brian J. Dunkin,
Alvin C. Goh, and Brian J. Miles

25  Workload and Performance Analyses with Haptic
and Visually Guided Training in a Dynamic Motor Skill Task ....... 377
Joel C. Huegel and Marcia K. O’Malley

Index ................................................................. 389
Computational Surgery and Dual Training
Computing, Robotics and Imaging
