1	Introduction to Atom-Probe Tomography	1
1.1	Background Techniques and Processes	2
1.1.1	The Classical Field Electron Microscope	3
1.1.2	The Classical Field Ion Microscope	5
1.1.3	Emission Processes and Emission Characteristics/Products	7
1.1.4	Introduction to Field Evaporation	9
1.1.5	Classical Field Ion Mass Spectrometry	10
1.1.6	Field Ion Appearance-Energy Spectroscopy	11
1.1.7	Field Desorption Imaging	11
1.2	Field Ion Microscopy	15
1.2.1	Microscopy Practicalities	16
1.2.2	Outline of the Field Ion Imaging Process	18
1.2.3	The Identification of FIM Image Spots as Images of Atoms	21
1.2.4	Basic Interpretation of Field Ion Images	23
1.2.5	Examples of Field Ion Micrographs	25
1.2.6	Estimation of Parameters from Field Ion Images	29
1.3	Atom Probe Designs	33
1.3.1	Classical Atom Probe Designs	33
1.3.2	Wide-Angle-View Atom Probes	34
1.3.3	Local Electrode Atom Probe	36
1.3.4	Practical Considerations Relating to Pulsed Field Evaporation	37
1.3.5	Examples of APT	39
	References	47
2	Introduction to the Physics of Field Ion Emitters	51
2.1	High Electric Field Nanoscience	51
2.2	Basic Electron Potential Energy Models	52
2.2.1	The Sommerfeld Model	52

2.2.2	Work Function Theory and Related Effects	55
2.2.3	Electron Potential Energy with an External Atom Present	56
2.2.4	Field Penetration and Band Bending in Semiconductors	57
2.3	Fields, Potentials, and Charged Surface Models	59
2.3.1	Electric Field Types	59
2.3.2	Classical-Conductor Models for Field Emitters	62
2.3.3	Classical Array-Type Charged Surface Models	67
2.3.4	Quantum-Mechanical Charged Surface Models	71
2.3.5	The Issue of “Field Penetration”	72
2.4	Thermodynamics of Charged Surfaces	73
2.4.1	Surface Stress	73
2.4.2	The Electrical Gibbs Function	74
2.4.3	Field Dependence of Metal Atom Bonding Energy	75
2.4.4	Thermodynamically Driven Effects	76
2.5	Basic System Energetics of Field Ion Emission	79
2.5.1	Standard System Potential Energy Curves	79
2.5.2	Electron Orbital Level	81
2.5.3	Critical Distance, Critical Surface and Forbidden Zone	82
2.5.4	Static Energy Deficits and Appearance Energies	83
2.6	Field Adsorption	84
2.7	Field Ionization and Post-Field-Ionization	86
2.7.1	Introduction	86
2.7.2	Surface Field Ionization Theory for Imaging Gas Atoms	87
2.7.3	Post-Field-Ionization of Metal Ions	88
2.8	Field Ion Imaging	89
2.8.1	Introduction	89
2.8.2	Contributions to Emission Current Density	89
2.8.3	Imaging Gas Behavior	90
2.9	Field Calibration	93
2.9.1	Introduction	93
2.9.2	Calibration via Field Electron Emission	93
2.9.3	Calibration via Free-Space Field Ionization	94
2.9.4	Calibration via Post-Field-Ionization	95
2.10	The Charged-Particle Optics of Field Emitters	96
2.10.1	Introduction	96
2.10.2	Operation of the Spherical Charged-Particle Emitter	97
2.10.3	Operation of the Weak Lens	99
2.10.4	The Link Between Optical and Projection Methods	101
2.10.5	Spot Size and Resolving Power	102
2.10.6	Aberrations	104
	References	105

3	Field Evaporation and Related Topics	111
3.1	Introduction	111
3.2	Theoretical Preliminaries	112
3.2.1	Field-Assisted Removal Processes	112
3.2.2	FEV as a Multi-step Process	114
3.2.3	FEV Rate-Constant	114
3.2.4	The FEV Emission Equation	116
3.2.5	Atom-Probe Operating Conditions and Related Issues	118
3.2.6	Field and Temperature Sensitivities	120
3.2.7	Evaporation Field and Voltage Definitions	120
3.2.8	Potential-Energy Curves for Field Desorption	121
3.2.9	Estimation of Zero-Barrier Evaporation Field	124
3.3	The Debate Over the Nature of Field Evaporation	125
3.3.1	Introduction	125
3.3.2	The Reality of PFI	126
3.3.3	Müller's Formula as a Prediction from Energetics	129
3.3.4	The Escape Mechanism and How to Model It	130
3.3.5	The Current Picture of the Charge-Draining Mechanism	139
3.3.6	Alternative Escape Mechanisms	141
3.4	The Field Dependence of Activation Energy	143
3.4.1	Experimental Support for the 1982 Formula	143
3.4.2	Problems with the 1982 Formula	145
3.4.3	Scaled Formulae	146
3.4.4	Tungsten Charge-Draining Effects	148
3.4.5	Charge-Draining Effects for Other Materials	153
3.5	The Prediction of Zero-Barrier Evaporation Field	155
3.5.1	Improvement of Classical Prediction Methods	156
3.5.2	Testing ZBEF Estimates	156
3.6	Field Evaporation Products	159
3.6.1	Low-Temperature FEV of Metal Elements	159
3.6.2	FEV Products at Higher Temperatures	160
3.7	Laser-Specimen Interaction Physics	161
3.7.1	Introduction	161
3.7.2	Interactions without Applied Electrostatic Fields	162
3.7.3	Interactions in Negative Applied Fields	163
3.7.4	Interactions in Positive Applied Fields	165
3.8	Pulsing Issues	168
3.8.1	Voltage-Pulsing	168
3.8.2	Thermal Pulsing	169
3.9	Field Evaporation of Other Materials	176
3.9.1	Alloys and Two-Phase Materials	176
3.9.2	Semiconductors	177
3.10	The Future of Atom-Probe Emission Theory	181
	References	182

4	The Art of Specimen Preparation	189
4.1	Specimen Requirements	189
4.2	Electropolishing	190
4.2.1	Double Layer Technique	191
4.2.2	Electrolytes and Polishing Conditions	192
4.2.3	Loop Method	195
4.2.4	Pulse Polishing	196
4.2.5	Specimen Cleaning and Handling	196
4.2.6	Electropolishing Artifacts	197
4.3	Ion Beam Methods	198
4.4	FIB-Based Methods	199
4.4.1	Total Release Method	206
4.4.2	Alternative Method	209
4.4.3	Annular Milling	210
4.4.4	Site-Specific Regions	212
4.5	Special Cases	213
4.5.1	Powders	214
4.5.2	Catalyst Particles	215
4.5.3	Ribbon and Thin Sheet	215
4.5.4	Thin Films and Multilayers	217
4.5.5	Nanowires	217
4.5.6	Specimens from TEM Disks	219
4.5.7	Biological Materials	220
4.6	FIB Artifacts	221
4.6.1	Damage from Ga Ions	221
4.6.2	Preferential Milling and Curtaining	224
4.7	Specimen Failure Mechanisms	225
	References	225
5	The Local Electrode Atom Probe	229
5.1	Overview of the Instrument	229
5.2	Local Electrode	233
5.3	Pulsing Options	236
5.3.1	Voltage Pulse Generator	236
5.3.2	Laser Pulse Generator	237
5.4	Nano-Positioning Stage and Specimens	238
5.4.1	Interchangeable Specimens	239
5.4.2	Alignment of Specimen with Local Electrode	240
5.4.3	Alignment of Laser Beam with the Specimen and Aperture	241
5.5	Cryostat and Specimen Base Temperature	245
5.6	Time-of-Flight Mass Spectrometry	247
5.6.1	Microchannel Plates	248
5.6.2	Crossed Delay Line Position-Sensitive Sensor	251
5.6.3	Energy Compensation and Reflectrons	253
5.6.4	Kinetic Energy Discrimination	255
	References	257

6	Data Reconstruction	259
6.1	Atom Probe Analysis Procedures	260
6.1.1	Atom Probe Field Ion Microscope	260
6.1.2	Local Electrode Atom Probe	262
6.1.3	Experimental Conditions	264
6.1.4	Specimen Failure and Data Integrity	265
6.1.5	Calibration	266
6.2	Ion Identification and Interpretation of Mass Spectra	268
6.2.1	Sources of Ions	269
6.2.2	Mass Peaks and Isotope Deconvolution	272
6.2.3	Noise and Background Subtraction	273
6.2.4	Ion Correlation Histograms	275
6.3	Composition Estimates	277
6.3.1	General Protocol for Concentration Estimates	277
6.3.2	Range Files	278
6.4	Reconstruction of Atom Positions	280
6.4.1	Point-Projection Reconstruction or Bas Method	282
6.4.2	Other Protocols	285
6.4.3	Modeling Studies and Simulations	286
6.4.4	Data File Formats	287
6.5	Data Visualization Methods	288
6.5.1	Color Theory	289
6.5.2	Atom Maps	290
6.5.3	Binning and Smoothing Data	291
6.5.4	Isosurfaces	295
6.5.5	SDMs and the 3D Hough Transformation	297
6.6	Lattice Rectification	299

Atom-Probe Tomography

The Local Electrode Atom Probe

Miller, M.K.; Forbes, R.G.

2014, XVIII, 423 p. 182 illus., 62 illus. in color.,

Hardcover

ISBN: 978-1-4899-7429-7
