## Contents

1 An Overview of Cancer Metabolism .................................................... 1
   References .......................................................................................... 4

2 Cancer Hypoxia and the Tumour Microenvironment as Effectors of Cancer Metabolism ......................................................... 7
   2.1 Hypoxia-Inducible Factors and Their Role in Tumour Hypoxia ...... 8
   2.2 Tumour Hypoxia: The Impact on Treatment .................................. 10
   2.3 Strategies to Overcome Chemotherapy Resistance in Tumour Hypoxia ................................................................. 11
   References .......................................................................................... 12

3 Metabolic Fingerprinting of In Vitro Cancer Cell Samples .......... 15
   References .......................................................................................... 19

4 Network-Based Correlation Analysis of Metabolic Fingerprinting Data ................................................................. 21
   4.1 Calculating Correlation Coefficients ........................................... 23
       4.1.1 Correlation Coefficient Transformation ............................... 26
       4.1.2 Determining the Significance of a Correlation Coefficient .... 27
       4.1.3 Determining the Significance of Difference Between
            Correlation Coefficients .......................................................... 28
   4.2 Network Analysis ........................................................................... 30
       4.2.1 Currency Metabolites ............................................................. 31
   4.3 The Use of Network-Based Correlation Analysis in Reality .......... 32
   References .......................................................................................... 33

5 Case Study: Systems Biology of HIF Metabolism in Cancer ....... 35
   5.1 Hypoxia Inducible Factor—1 ....................................................... 35
   5.2 Network-Based Correlation Analysis of HIF-1 Metabolism .......... 36
       5.2.1 Correlation Analysis .............................................................. 38
       5.2.2 Network-Based Correlation Analysis ..................................... 41
   5.3 Conclusion ..................................................................................... 46
   References .......................................................................................... 47
6 Case Study: Systems Biology of Chemotherapy Resistance in Hypoxic Cancer .......................................................................................... 49
   6.1 Doxorubicin .................................................................................. 49
   6.2 Network-Based Correlation Analysis to Study Hypoxia Induced Chemoresistance ........................................................................ 53
      6.2.1 Correlation Analysis ............................................................... 54
      6.2.2 Network Analysis ................................................................. 56
   6.3 Conclusion .................................................................................... 59
References ............................................................................................ 59
Correlation-based network analysis of cancer metabolism
A new systems biology approach in metabolomics
Armitage, E.G.; Kotze, H.L.; Williams, K.J.
2014, VI, 61 p. 20 illus., 13 illus. in color., Softcover
ISBN: 978-1-4939-0614-7
