Preface

We are proud to offer this volume from the 61st Nebraska Symposium on Motivation.

The volume editor is Scott Stoltenberg, who coordinated the symposium that led to this volume including selecting and inviting the contributors. I sincerely thank Professor Stoltenberg and the contributors for an outstanding series of papers on the influence of genetic variability on substance use and abuse.

This Symposium series is supported by funds provided by the Chancellor of the University of Nebraska-Lincoln, Harvey Perlman, and by funds given in memory of Professor Harry K. Wolfe to the University of Nebraska Foundation by the late Professor Cora L. Friedline. We are extremely grateful for the Chancellor’s generous support of the Symposium series and for the University of Nebraska Foundation’s support via the Friedline bequest. This symposium volume, like those in the recent past, is dedicated to the memory of Professor Wolfe, who brought psychology to the University of Nebraska. After studying with Professor Wilhelm Wundt in Germany, Professor Wolfe returned to this, his native state, to establish the first undergraduate laboratory in psychology in the nation. As a student at Nebraska, Professor Friedline studied psychology under Professor Wolfe.
