## 3 The Art and Science of Doctoring

- More Than Technical Skill ......................................................... 54
- About Offering Hope ................................................................. 56
- Practical Medicine in Medical Practice ....................................... 58
- Reconciling Uncertainty and Probability ..................................... 60
- The Confidence of the Healer ...................................................... 62
- Disease, Man, and the World ...................................................... 64
- Caring for the Patient ................................................................. 66
- Satisfaction and Choices in Medicine .......................................... 68
- Touching, Listening, and Technology .......................................... 70
- Revealing the Physician’s Human Side ........................................ 72

## 4 Health, Disease, Illness, and Death

- Disease and Its Manifestations .................................................... 76
- The Movement of Blood as a Disruptive Discovery ...................... 78
- Describing the Pain of Gout ........................................................ 80
- Scurvy, Citrus, and History .......................................................... 82
- On Precise Names of Diseases ..................................................... 84
- The Beginning of the End of Smallpox ......................................... 86
- About the Great Pox ..................................................................... 88
- Great Outbreaks as Things of the Past ......................................... 90
- Hand-Washing and Childbed Fever .............................................. 92
- On Chorea, Dancing, and Genetic Screening ................................. 94
- Disease and the Destiny of Humankind ....................................... 96
- Silence That Goes Beyond Words ............................................... 98
- Accepting the Inevitable ............................................................. 100

## 5 Disease Detection and Diagnosis

- The Doctor as Patient and Diagnostician ...................................... 104
- The Role of Patience in Diagnosis .............................................. 106
- On Innovation in Diagnostic Methods ......................................... 108
- What We Learn by Just Looking ............................................... 110
- In Search of the Whole-Patient Diagnosis .................................... 112
- The Successful Diagnostician ..................................................... 114
- Seeing What Others Overlook .................................................... 116
- Attending to Clues Wherever Found ........................................... 118
- The Medical History as a Work of Art ......................................... 120
- Common Things Occur Most Commonly .................................... 122
- The Patient’s Story and the Good Medical History ....................... 124

## 6 Therapy and Healing

- In Praise of the Old Remedies .................................................... 128
- About Being a Surgeon ............................................................... 130
- The Role of Natural Vitality in Healing ....................................... 132
- Dogma and the Authority of the Physician .................................. 134
- About Making the Fewest Mistakes ........................................... 136
Contents

Confidence at the Operating Table ........................................................... 140
The Physician and Prescription Regret .................................................. 142
Becoming a Healer .................................................................................. 144
Understanding the Fundamentals of Therapy ......................................... 146
Choices at the End of Life ....................................................................... 148

7 Learning and Teaching Medicine ......................................................... 150
Learning While Teaching ....................................................................... 152
About the Lecture in Teaching and Learning ........................................ 154
Always Being a Student ........................................................................ 156
Fewer but Better, but for Whom? ......................................................... 158
About Teaching and Medical Fads ......................................................... 160
Being a Teacher and a Student ............................................................. 162
Teaching the Teachers .......................................................................... 164
Aspiring Tailors and Physicians ........................................................... 166

8 Medical Experience, Knowledge, and Wisdom .................................... 168
The Roots of Scientific Medicine ............................................................ 170
About Observation and Discovery ......................................................... 172
Try the Experiment ............................................................................... 174
On Caution with Hypothetical Statements ........................................... 176
Chance and the Prepared Mind ............................................................. 178
About Outside Influences on Medicine ................................................ 180
Medical History as the History of Humanity ......................................... 182
Not Quite Everything Discovered Yet .................................................. 184
Not Always by Accumulation of Data .................................................... 186
Believing in Your Work ......................................................................... 188
What Nobody Else Has Thought .......................................................... 190

9 Errors, Uncertainty, and Ethical Issues .............................................. 192
First, Do No Harm ................................................................................ 194
On Being Very Wrong .......................................................................... 196
About Admitting Errors ....................................................................... 198
There Are None Whom We Cannot Harm ........................................... 200
When Ethical Values Collide ................................................................. 202
Textbooks and the Avoidance of Standardization .................................. 204
In Praise of Restraint in Health Care .................................................... 206
Sometimes Depression and Loneliness ................................................. 208
Swimming in the Waters of Uncertainty ............................................... 210

10 Current Issues and Future Practice .................................................. 212
Discovering the Motions of the Internal Organs ..................................... 214
Language in Medicine and Other Endeavors ....................................... 216
Hospitals and Harm, Then and Now ...................................................... 218
Teamwork and Tomorrow’s Practice .................................................... 220
Contract Practice in the Twenty-First Century ....................................... 222
On the Shoulders of Medicine's Giants
What Today's Clinicians Can Learn from Yesterday's Wisdom
Taylor, R.B.
