## Contents

*Preface* .......................................................... v
*Contributors* .................................................. ix

1 Long-Term Selection Experiments: Epistasis and the Response to Selection ... 1
   *Charles Goodnight*

2 Finding the Epistasis Needles in the Genome-Wide Haystack ................. 19
   *Marylyn D. Ritchie*

3 Biological Knowledge-Driven Analysis of Epistasis in Human GWAS with Application to Lipid Traits .................................................. 35
   *Li Ma, Alon Keinan, and Andrew G. Clark*

4 Epistasis for Quantitative Traits in *Drosophila* ................................ 47
   *Trudy F.C. Mackay*

5 Epistasis in the Risk of Human Neuropsychiatric Disease ..................... 71
   *Scott M. Williams*

6 On the Partitioning of Genetic Variance with Epistasis ....................... 95
   *José M. Álvarez-Castro and Arnaud Le Rouzic*

7 Measuring Gene Interactions ........................................ 115
   *Thomas F. Hansen*

8 Two Rules for the Detection and Quantification of Epistasis and Other Interaction Effects .................................................... 145
   *Günter P. Wagner*

9 Direct Approach to Modeling Epistasis ..................................... 159
   *Rong-Cai Yang*

10 Capacitating Epistasis—Detection and Role in the Genetic Architecture of Complex Traits .......................................................... 185
    *Mats E. Pettersson and Örjan Carlborg*

11 Compositional Epistasis: An Epidemiologic Perspective .................... 197
    *Etsuji Suzuki and Tyler J. VanderWeele*

12 Identification of Genome-Wide SNP–SNP and SNP–Clinical Boolean Interactions in Age-Related Macular Degeneration ...................... 217
    *Carlos Riveros, Renato Vimieiro, Elizabeth G. Holliday, Christopher Oldmeadow, Jie Jin Wang, Paul Mitchell, John Attia, Rodney J. Scott, and Pablo A. Moscato*

13 Epistasis Analysis Using Information Theory ................................ 257
    *Jason H. Moore and Ting Hu*

14 Genome-Wide Epistasis and Pleiotropy Characterized by the Bipartite Human Phenotype Network ................................................. 269
    *Christian Darabos and Jason H. Moore*
## Contents

15  Network Theory for Data-Driven Epistasis Networks  
    **Caleb A. Lareau and Brett A. McKinney**  
    285

16  Epistasis Analysis Using Multifactor Dimensionality Reduction  
    **Jason H. Moore and Peter C. Andrews**  
    301

17  Epistasis Analysis Using ReliefF  
    **Jason H. Moore**  
    315

18  Epistasis Analysis Using Artificial Intelligence  
    **Jason H. Moore and Doug P. Hill**  
    327

*Index*
