

# Contents

<b>1 Introduction</b> .....	1
1.1 Mathematical Modeling .....	2
1.1.1 Modeling an Open System .....	2
1.1.2 Examples of EWR Models .....	2
1.1.3 General Form and Classification .....	7
1.1.4 Model Construction Process .....	8
1.2 Forward Solution .....	10
1.2.1 The Forward Problem .....	10
1.2.2 Solution Methods .....	10
1.2.3 Well-Posedness of the Forward Problem .....	13
1.3 Model Calibration and Parameter Estimation .....	14
1.3.1 Data Availability .....	14
1.3.2 Methods and Criteria .....	15
1.3.3 The Inverse Problem .....	15
1.3.4 Model Structure Identification .....	19
1.4 Model Reliability .....	20
1.4.1 Model Uncertainty Analysis .....	20
1.4.2 Problems and Difficulties in Model Construction .....	21
1.4.3 Goal-Oriented Modeling .....	23
1.5 Review Questions .....	24
<b>2 The Classical Inverse Problem</b> .....	25
2.1 Approximate Solutions .....	26
2.1.1 The Direct Method for Inverse Solution .....	26
2.1.2 The Indirect Method of Inversion .....	28
2.1.3 Well-Posedness of the Quasi-solution .....	30
2.1.4 Parameterization and Discretization .....	32
2.2 Linear Model Identification .....	34
2.2.1 Linear Model and Normal Equation .....	34
2.2.2 Estimation Using Singular Value Decomposition .....	38
2.2.3 Truncated Singular Value Decomposition .....	41
2.2.4 Linearization .....	43
2.3 Nonlinear Model Identification .....	46
2.3.1 Inverse Solution and Optimization .....	46

- 2.3.2 Basic Concepts of Numerical Optimization ..... 48
- 2.3.3 Algorithms for Local Optimization ..... 51
- 2.3.4 Norm Selection ..... 58
- 2.4 The Gauss–Newton Method ..... 61
  - 2.4.1 The Gauss–Newton Method for Least Squares ..... 61
  - 2.4.2 Modified Gauss–Newton Methods ..... 63
  - 2.4.3 Application to Inverse Solution ..... 65
- 2.5 Review Questions ..... 66
- 3 Multiobjective Inversion and Regularization..... 69**
  - 3.1 Multiobjective Optimization ..... 70
  - 3.2 The Second Criterion of Inverse Problem Formulation ..... 71
    - 3.2.1 Inversion with Prior Information ..... 71
    - 3.2.2 Formulation of the Bicriterion Inverse Problem ..... 72
    - 3.2.3 Inversion with Constrained Optimization ..... 76
  - 3.3 Regularization ..... 78
    - 3.3.1 Tikhonov Regularization ..... 78
    - 3.3.2 Regularization of Linear Models ..... 79
    - 3.3.3 Selection of Regularization Coefficients ..... 80
  - 3.4 Parameter Identification of Multistate Models ..... 86
    - 3.4.1 Multistate Modeling ..... 86
    - 3.4.2 Coupled Inverse Problems ..... 88
    - 3.4.3 Solution of Coupled Inverse Problems ..... 90
  - 3.5 Parameter Identification with Multiobjectives ..... 93
  - 3.6 Algorithms for Multiobjective Optimization ..... 96
    - 3.6.1 Deterministic Methods ..... 96
    - 3.6.2 Genetic Algorithm ..... 99
    - 3.6.3 Multiobjective Evolutionary Algorithm ..... 103
  - 3.7 Review Questions..... 105
- 4 Statistical Methods for Parameter Estimation ..... 107**
  - 4.1 The Statistical Inverse Problem ..... 108
    - 4.1.1 Statement of the Statistical Inverse Problem ..... 108
    - 4.1.2 Information Content and Uncertainty ..... 109
    - 4.1.3 Bayesian Inference for Inverse Solution ..... 111
    - 4.1.4 Probability Distribution of Observation Error ..... 114
    - 4.1.5 Probability Distribution of Prior Information ..... 116
  - 4.2 Point Estimation ..... 117
    - 4.2.1 Maximum a Posteriori Estimate ..... 117
    - 4.2.2 Estimators With Uniform Prior Distribution ..... 119
    - 4.2.3 Estimators With Gaussian Prior Distribution ..... 121
    - 4.2.4 Minimum Relative Entropy Estimator ..... 123
    - 4.2.5 Bayesian Inversion for Multistate Models ..... 124
  - 4.3 Monte Carlo Methods for Bayesian Inference ..... 125
    - 4.3.1 Exploring the Posterior Distribution ..... 125
    - 4.3.2 Markov Chain Monte Carlo Sampling Techniques ..... 126

- 4.3.3 Sampling for Inverse Solution ..... 134
- 4.3.4 Simulated Annealing ..... 137
- 4.4 Review Question ..... 139
  
- 5 Model Differentiation ..... 141**
  - 5.1 Perturbation Method ..... 142
  - 5.2 Sensitivity Equation Method ..... 143
    - 5.2.1 Sensitivity Equation and Its Solution ..... 143
    - 5.2.2 Discrete Form ..... 148
  - 5.3 The Adjoint-State Method ..... 149
    - 5.3.1 Single-State Models ..... 149
    - 5.3.2 Rules of Adjoint Operation ..... 152
    - 5.3.3 Multistate Models ..... 159
    - 5.3.4 Discrete Form ..... 166
  - 5.4 Automatic Differentiation ..... 171
    - 5.4.1 The Forward Mode ..... 172
    - 5.4.2 The Reverse Mode ..... 174
  - 5.5 Applications of Model Differentiation ..... 176
    - 5.5.1 Numerical Optimization ..... 176
    - 5.5.2 Local Sensitivity Analysis ..... 177
    - 5.5.3 Dimensionless Sensitivity Analysis ..... 182
  - 5.6 Review Questions ..... 184
  
- 6 Model Dimension Reduction ..... 185**
  - 6.1 Parameterization of a Deterministic Function ..... 186
    - 6.1.1 Function Approximation for Inversion ..... 186
    - 6.1.2 Interpolation as a Tool for Parameterization ..... 190
    - 6.1.3 Inverse Distance Weighting ..... 192
    - 6.1.4 Voronoi Diagram and Delaunay Tessellation ..... 195
    - 6.1.5 Approximation with Radial Basis Functions ..... 199
    - 6.1.6 Local Polynomial Approximation ..... 201
  - 6.2 Parameterization of Random Fields ..... 202
    - 6.2.1 Gaussian Random Field ..... 202
    - 6.2.2 Markov Random Field ..... 204
    - 6.2.3 Variogram ..... 207
    - 6.2.4 Geostatistical Interpolation ..... 216
    - 6.2.5 Multipoint Statistics ..... 222
  - 6.3 Linear Dimension Reduction ..... 226
    - 6.3.1 Principal Component Analysis ..... 226
    - 6.3.2 Factor Analysis ..... 229
    - 6.3.3 Dimension Reduction for Inversion ..... 233
  - 6.4 Nonlinear Dimension Reduction ..... 239
    - 6.4.1 Kernel PCA ..... 239
    - 6.4.2 Laplacian Eigenmaps ..... 243
  - 6.5 Review Questions ..... 245

<b>7</b>	<b>Model Structure Identification</b>	247
7.1	Model Structure Parameterization	248
7.1.1	Model Structure Representation	248
7.1.2	Extended Inverse Problem	250
7.1.3	Model Complexity Selection	252
7.2	Adaptive Parameterization	255
7.2.1	General Algorithm	255
7.2.2	Adding Basis Points	260
7.2.3	Zone Refinement	265
7.2.4	The Level Set Method	268
7.3	Multiscale Inversion	276
7.3.1	Multiscale Refinement	276
7.3.2	Multiscale Modeling	278
7.4	Statistical Structure Parameter Estimation	282
7.4.1	Statistical Parameterization and Hyperparameters	282
7.4.2	Hierarchical Bayesian Inversion	285
7.4.3	Geostatistical Inversion	289
7.4.4	The Pilot-Point Method	299
7.5	Review Questions	302
<b>8</b>	<b>Development of Data-Driven Models</b>	305
8.1	Linear Regression	307
8.1.1	Autoregressive Models	308
8.1.2	Model Complexity Control	315
8.1.3	Multiple Target Regression	317
8.1.4	Linear Regression with Basis Functions	319
8.2	Artificial Neural Network	321
8.2.1	Multilayer Perceptron Networks	322
8.2.2	Training of an ANN	323
8.2.3	Radial Basis Function Network	329
8.2.4	Use ANN for Inverse Solution	332
8.2.5	ANN Ensembles	336
8.3	Support Vector Machine and Relevance Vector Machine	339
8.3.1	Support Vector Machine Regression	339
8.3.2	Relevance Vector Machine	347
8.4	Gaussian Process Regression	351
8.4.1	Weight Space View	352
8.4.2	Functional Space View	354
8.5	Review Questions	358
<b>9</b>	<b>Data Assimilation for Inversion</b>	361
9.1	Basic Concepts and Methods	363
9.1.1	State-Space Model	363
9.1.2	Combined State and Parameter Estimation	369
9.2	The Kalman Filter	377

- 9.3 Nonlinear System Filtering ..... 381
  - 9.3.1 Extended Kalman Filter ..... 381
  - 9.3.2 Unscented Kalman Filter ..... 386
  - 9.3.3 Gaussian Sum Filter ..... 390
- 9.4 Reduced-Rank Filters ..... 392
  - 9.4.1 The Classical Ensemble Kalman Filter ..... 392
  - 9.4.2 Variants of the EnKF ..... 399
- 9.5 Particle Filters ..... 403
- 9.6 Review Questions ..... 405
  
- 10 Model Uncertainty Quantification ..... 407**
  - 10.1 Basic Concepts ..... 409
    - 10.1.1 Definitions and Taxonomy ..... 409
    - 10.1.2 Model Uncertainty Propagation ..... 411
    - 10.1.3 Measures of Uncertainty ..... 412
    - 10.1.4 Monte Carlo Simulation ..... 414
  - 10.2 Sensitivity-Based Methods ..... 416
    - 10.2.1 Local Sensitivity Analysis ..... 416
    - 10.2.2 Global Sensitivity Analysis ..... 418
    - 10.2.3 Screening Input Factors ..... 424
  - 10.3 Stochastic Methods for Uncertainty Propagation ..... 426
    - 10.3.1 Stochastic Response Surface Methods ..... 427
    - 10.3.2 Polynomial Chaos ..... 428
    - 10.3.3 Stochastic Collocation Method ..... 441
  - 10.4 Assessment of Model Structure Uncertainty ..... 449
    - 10.4.1 Bayesian Modeling Averaging ..... 451
    - 10.4.2 Other Model Averaging Approaches ..... 456
  - 10.5 Review Questions ..... 458
  
- 11 Optimal Experimental Design ..... 459**
  - 11.1 Basic Concepts and Formulation ..... 460
    - 11.1.1 Decision Variables of an Experimental Design ..... 460
    - 11.1.2 Formulation of Optimal Experimental Design ..... 463
  - 11.2 Experimental Design for Linear Model Inversion ..... 464
    - 11.2.1 Design with Uniform Prior Distribution ..... 464
    - 11.2.2 Design with Gaussian Prior Distribution ..... 470
  - 11.3 Experimental Design for Nonlinear Model Inversion ..... 471
    - 11.3.1 Linearization ..... 471
    - 11.3.2 Bayesian Experimental Design ..... 473
    - 11.3.3 Robust Experimental Design ..... 476
    - 11.3.4 Interval Identifiability and Experimental Design ..... 479
  - 11.4 Other Objectives of Optimal Experimental Design ..... 485
    - 11.4.1 Design for Cost-Effectiveness ..... 485
    - 11.4.2 Design for Model Prediction ..... 488
    - 11.4.3 Design for Decision Making ..... 497

- 11.4.4 Design for Geostatistical Inversion ..... 502
- 11.4.5 Design for Model Structure Identification ..... 505
- 11.5 Review Questions ..... 506
- 12 Goal-Oriented Modeling ..... 509**
  - 12.1 Goal-Oriented Forward Problem ..... 510
    - 12.1.1 Goal-Oriented Model Reduction ..... 510
    - 12.1.2 Goal-Oriented Multiscale Modeling ..... 513
    - 12.1.3 Goal-Oriented Principal Component Analysis ..... 514
  - 12.2 Goal-Oriented Inverse Problem ..... 514
    - 12.2.1 Basic Problems in Model Construction ..... 514
    - 12.2.2 Formulation of GIP ..... 516
  - 12.3 Goal-Oriented Inversion ..... 518
    - 12.3.1 Model Structure Reduction and the Model Application Error ..... 518
    - 12.3.2 Measure the Difference Between Two Model Structures ... 519
    - 12.3.3 Solution Process ..... 523
    - 12.3.4 The Maximum Homogenization Error ..... 526
  - 12.4 Goal-Oriented Experimental Design ..... 531
    - 12.4.1 Goal-Oriented Identifiability ..... 531
    - 12.4.2 Data Sufficiency for GIP ..... 534
    - 12.4.3 Cost-Effective Experimental Design for GIP ..... 535
  - 12.5 Statistical Goal-Oriented Inverse Problem ..... 538
    - 12.5.1 Formulation of GIP in the Statistical Framework ..... 538
    - 12.5.2 Geostatistical Parameterization for GIP ..... 539
    - 12.5.3 A Goal-Oriented Pilot Point Method ..... 540
  - 12.6 Review Questions ..... 550
- Appendix ..... 553**
  - Appendix A: Functional Spaces and Mapping ..... 553
    - A.1 Function Spaces ..... 553
      - A.1.1 Linear Space ..... 553
      - A.1.2 Normed Space ..... 554
      - A.1.3 Metric Space ..... 555
      - A.1.4 Inner Product Space ..... 556
      - A.1.5 Basis of a Hilbert Space ..... 557
      - A.1.6 Expansion and Approximation in Hilbert Spaces ..... 557
    - A.2 Mappings and Operators ..... 558
      - A.2.1 Mapping ..... 558
      - A.2.2 Operator ..... 559
      - A.2.3 Linear Operator ..... 560
      - A.2.4 Adjoint Operator ..... 560

- Appendix B: Probability, Statistics, and Random Fields ..... 561
- B.1 Random Variables and Probability Distributions ..... 561
  - B.1.1 Probability ..... 561
  - B.1.2 Random Variables ..... 562
  - B.1.3 The Expected Value and Variance of a Random Variable .... 563
  - B.1.4 Some Important Continuous Probability Distributions ..... 563
- B.2 Multivariate Probability Distributions ..... 565
  - B.2.1 Joint Probability Density Function ..... 565
  - B.2.2 Random Vectors ..... 567
  - B.2.3 Expected Value, Variance, and Covariance ..... 567
- B.3 Bayes' Theorem ..... 569
- B.4 Random Fields, Auto- and Cross-Covariance Functions ..... 570
- Appendix C Matrix Algebra and Matrix Calculus ..... 571
- C.1 Matrix Algebra ..... 571
  - C.1.1 Definitions and Important Operation Rules ..... 571
  - C.1.2 Eigenvalue Decomposition ..... 573
  - C.1.3 Matrix Norms ..... 574
- C.2 Matrix Calculus ..... 575
  - C.2.1 Definitions ..... 575
  - C.2.2 Important Operation Rules ..... 578
  - C.2.3 The Gradient of a Parameterized Matrix ..... 580
