Contents

Preface ........................................................................................................ v
Contributors ............................................................................................... xi

PART I LABELING STRATEGIES

1 Semisynthesis and Enzymatic Preparation of Post-translationally
Modified α-Synuclein ................................................................. 3
Bruno Fauvet and Hilal A. Lasbuel

2 Isotope-Labeled Amyloids via Synthesis, Expression, and Chemical
Ligation for Use in FTIR, 2D IR, and NMR Studies .......... 21
Tianqi O. Zhang, Maksim Grechko, Sean D. Moran,
and Martin T. Zanni

PART II KINETICS/MECHANISM

3 Intermolecular Paramagnetic Relaxation Enhancement (PRE) Studies
of Transient Complexes in Intrinsically Disordered Proteins .......... 45
Maria K. Janowska and Jean Baum

4 Detection of Helical Intermediates During Amyloid Formation
by Intrinsically Disordered Polypeptides and Proteins ............... 55
Andisheh Abedini, Ping Cao, and Daniel P. Raleigh

5 Fluorescence Correlation Spectroscopy: A Tool to Study Protein
Oligomerization and Aggregation In Vitro and In Vivo .......... 67
Bankanidhi Sahoo, Kenneth W. Drombosky, and Ronald Wetzel

6 Deep UV Resonance Raman Spectroscopy for Characterizing
Amyloid Aggregation ................................................................. 89
Joseph D. Handen and Igor K. Lednev

7 Analyzing Tau Aggregation with Electron Microscopy ........... 101
Carol J. Huseby and Jeff Kuret

PART III OLIgOMERS

8 Characterization of Amyloid Oligomers by Electrospray Ionization-Ion
Mobility Spectrometry-Mass Spectrometry (ESI-IMS-MS) ...... 115
Charlotte A. Scarff, Alison E. Ashcroft, and Sheena E. Radford

9 Formation and Characterization of α-Synuclein Oligomers .... 133
Wojciech Paslawski, Nikolai Lorenzen, and Daniel E. Otzen

10 Fluorescence Methods for Unraveling Oligomeric Amyloid Intermediates .... 151
Niels Zijlstra, Nathalie Schilderink, and Vinod Subramaniam
Part IV  Fibrils

11 Preparation of Amyloid Fibrils for Magic-Angle Spinning
Solid-State NMR Spectroscopy .................................................. 173
Marcus D. Tuttle, Joseph M. Courtney, Alexander M. Barclay,
and Chad M. Rienstra

12 Spin Labeling and Characterization of Tau Fibrils Using Electron
Paramagnetic Resonance (EPR) .................................................. 185
Virginia Meyer and Martin Margittai

13 Preparation of Crystalline Samples of Amyloid Fibrils and Oligomers. ........ 201
Asher Moshe, Meytal Landau, and David Eisenberg

14 Quenched Hydrogen Exchange NMR of Amyloid Fibrils .......................... 211
Andrei T. Alexandrescu

Part V  Computational Approaches

15 Studying the Early Stages of Protein Aggregation Using Replica
Exchange Molecular Dynamics Simulations .................................. 225
Joan-Emma Shea and Zachary A. Levine

16 Computational Methods for Structural and Functional Studies
of Alzheimer’s Amyloid Ion Channels ......................................... 251
Hyunbum Jang, Fernando Teran Aree, Joon Lee, Alan L. Gillman,
Srinivasan Ramachandran, Bruce L. Kagan, Ratnesh Lal,
and Ruth Nussinov

17 Analyzing Ensembles of Amyloid Proteins Using Bayesian Statistics .......... 269
Thomas Gurry, Charles K. Fisher, Molly Schmidt, and Collin M. Stultz

Part VI  Toxicity and Pathology

18 In Vitro Studies of Membrane Permeability Induced by Amyloidogenic
Polypeptides Using Large Unilamellar Vesicles ............................ 283
Ping Cao and Daniel P. Raleigh

19 Cell Models to Study Cell-to-Cell Transmission of α-Synuclein ............... 291
Eun-Jin Bae, He-Jin Lee, and Seung-Jae Lee

20 Preparation of Amyloid Fibrils Seeded from Brain and Meninges .............. 299
Kathryn P. Scherpelz, Jun-Xia Lu, Robert Tycko, and Stephen C. Meredith

Index ......................................................................................... 313
Protein Amyloid Aggregation
Methods and Protocols
Eliezer, D. (Ed.)
2016, XIV, 314 p. 73 illus., 49 illus. in color., Hardcover
ISBN: 978-1-4939-2977-1
