## Contents

1 Introduction and Historical Background ........................................... 1
   1.1 Electrons and the Electron Wavelength .................................. 1
   1.2 Electron and Sample Interaction ....................................... 2
   1.3 Transmission Electron Microscope ..................................... 5
   1.4 Electron Microdiffraction and STEM .................................. 7
   1.5 Analytical TEM ...................................................... 9
   1.6 A Brief History of Electron Microdiffraction ...................... 12
   1.7 A Note to Students and Lecturers .................................. 16
   References ........................................................................ 17

2 Electron Waves and Wave Propagation ........................................... 19
   2.1 Wave Functions and the Wave Equation ............................... 19
   2.2 Quantum Mechanical Wave of Electrons and Schrödinger
       Equation ................................................................. 22
   2.3 The Principle of Wave Superposition .................................. 24
   2.4 Amplitude and Phase Diagrams ......................................... 25
   2.5 Coherence and Interference ............................................. 25
   2.6 Wave Packets and the Uncertainty Principle ...................... 28
   2.7 The Gaussian Wave Packet and Its Propagation ................... 31
   2.8 Temporal Coherence .................................................... 33
   2.9 Spatial Coherence ...................................................... 35
   2.10 Electron Refraction and the Refractive Index ....................... 38
   2.11 Wave Propagation ...................................................... 39
       2.11.1 Huygens–Fresnel Principle .................................. 39
       2.11.2 Propagation of Plane Wave and Fresnel Zones ............ 41
       2.11.3 Fresnel Diffraction—The Near-Field Small-Angle
               Approximation ................................................. 43
       2.11.4 Fraunhofer Diffraction—Far-Field Forward
               Diffraction ...................................................... 46
   References ........................................................................ 47
3 The Geometry of Electron Diffraction Patterns

3.1 Bragg’s Law

3.2 Laue Diffraction Condition

3.3 Lattice $d$-Spacing and Crystal, Real, and Reciprocal Lattices

3.4 Transmission Electron Diffraction Patterns

3.5 Excitation Error

3.6 Kikuchi Lines and Their Geometry (Kinematic)

3.7 Diffraction Pattern Indexing

3.8 One-Dimensional (Systematics) CBED

3.9 Two-Dimensional CBED

3.10 High-Order Laue Zone (HOLZ) Lines

References

4 Kinematical Theory of Electron Diffraction

4.1 First-Order Born Approximation

4.2 Weak-Phase-Object Approximation

4.3 Electron Atomic Scattering

4.4 Kinematical Electron Scattering from a Monoatomic Small Crystal

4.5 Electron Crystal Structure Factors and the Diffracted Intensity from a Small Crystal

4.6 Integrated Diffraction Intensity of a Rotating Crystal

4.7 Atomic Thermal Vibrations and Effect on Electron Scattering

4.8 Electron Structure Factors

4.9 Electron-Optical Potential

References

5 Dynamical Theory of Electron Diffraction for Perfect Crystals

5.1 Many-Beam Theory, Wave-Mechanical Approach

5.2 Howie–Whelan Equations

5.3 Two-Beam Theory

5.4 The Concept of the Dispersion Surface

5.5 Absorption and Its Effects in a First-Order Approximation

5.6 Many-Beam Effects

5.6.1 Three-Beam Theory and Particular Solutions for Centrosymmetric Crystals

5.6.2 Two-Beam Theory with Weak-Beam Effects

5.6.3 Three-Beam Theory—Noncentrosymmetric Crystals and the Phase Problem

5.6.4 Dynamic HOLZ Intensities and Positions. Dispersion Surfaces for HOLZ Lines. How the Bragg Law Depends on Local Composition
