# Contents

Preface ....................................................................................... vii
Contributors ............................................................................ xiii

1 Current Trends and Alternative Scenarios in EBV Research .............. 1
   Janos Minarovits and Hans Helmut Niller

2 Epstein-Barr Virus: Clinical Diagnostics ...................................... 33
   Hans-Helmut Niller and Georg Bauer

3 Establishment of EBV-Infected Lymphoblastoid Cell Lines ............. 57
   Noemi Nagy

4 Generation and Infection of Organotypic Cultures with Epstein–Barr Virus... 65
   Rachel M. Temple, Craig Meyers, and Clare E. Sample

5 Affinity Purification–Mass Spectroscopy Methods for Identifying
   Epstein–Barr Virus–Host Interactions ....................................... 79
   Anna A. Georges and Lori Frappier

6 The Use of 3D Telomere FISH for the Characterization
   of the Nuclear Architecture in EBV-Positive Hodgkin’s Lymphoma .... 93
   Hans Knecht and Sabine Mai

7 Analysis of EBV Transcription Using High-Throughput RNA Sequencing . 105
   Tina O’Grady, Melody Baddoo, and Erik K. Flemington

8 Analysis of Viral Promoter Usage in EBV-Infected Cell Lines:
   A Comparison of qPCR Following Conventional RNA Isolation
   and Nuclear Run-On Assay .................................................... 123
   Kalman Szenthe and Ferenc Banati

9 Analysis of Viral and Cellular MicroRNAs in EBV-Infected Cells ........ 133
   Rebecca L. Skalsky

10 Isolation and Characterization of Exosomes Released
    by EBV-Immortalized Cells .................................................. 147
    Gulfaraz Khan and Waqar Ahmed

11 Functional Analysis of Exosomes Derived from EBV-Infected Cells .... 159
    Gulfaraz Khan and Pretty S. Philip

12 Terminal Repeat Analysis of EBV Genomes .................................. 169
    Ferenc Bánáti, Anita Koroknai, and Kálmán Szenthe

13 Characterization of EBV Promoters and Coding Regions
    by Sequencing PCR-Amplified DNA Fragments ....................... 179
    Kalman Szenthe and Ferenc Bánáti

14 The Use of Chromatin Precipitation Coupled to DNA Sequencing (ChIP-Seq)
    for the Analysis of Zta Binding to the Human and EBV Genome .......... 191
    Anja Godfrey, Sharada Ramasubramanyan, and Alison J. Sinclair
15 Analysis of Viral Epigenotypes Using Bisulfite Sequencing: A Detailed Protocol for the Crucial Bisulfite Modification and PCR Amplification Steps ................................... 207
   Daniel Salamon

16 Analysis of Viral Epigenotypes Using Chromatin Immunoprecipitation ....... 215
   Ferenc Bánáti and Kálmán Szenthe

17 Mice with Reconstituted Human Immune System Components as a Tool to Study Immune Cell Interactions in EBV Infection .............. 229
   Frank Heuts and Noemi Nagy

18 Generation and Analysis of Humanized Mouse Model of EBV Infection ....... 241
   Ken-Ichi Imadome and Shigeyoshi Fujiwara

19 EBV-Directed T Cell Therapeutics for EBV-Associated Lymphomas ......... 255
   Lauren P. McLaughlin, Stephen Gottschalk, Cliona M. Rooney,
   and Catherine M. Bollard

Index .............................................................. 267
Epstein Barr Virus
Methods and Protocols
Minarovits, J.; Niller, H.H. (Eds.)
2017, XIV, 269 p. 22 illus., 21 illus. in color., Hardcover
ISBN: 978-1-4939-6653-0
A product of Humana Press
