CONTENTS

Preface ........................................................................................................................................................................... v
Contributors ................................................................................................................................................................ xiii

PART I. ANTIMUTAGENS

1 Inducers of Enzymes That Protect Against Carcinogens and Oxidants:
   Drug- and Food-Based Approaches with Dithiolethiones and Sulforaphane ................................................ 3
   Thomas W. Kensler and Paul Talalay

2 Chemoprevention by Isothiocyanates ............................................................................................................... 21
   Stephen S. Hecht

3 Antigenotoxic and Cancer Preventive Mechanisms of N-Acetyl-l-Cysteine ............................................... 37
   Silvio De Flora, Alberto Izzotti, Adriana Albini, Francesco D’Agostini, Maria Bagnasco, and Roumen Balansky

4 Modifiers of Cytochrome(s) P450 .................................................................................................................... 69
   John D’Giovanni and Heather E. Kleiner

PART II. ANTIINFLAMMATORIES

5 Antiinflammatories and Chemoprevention: NSAIDs and Other Inhibitors
   of Arachidonic Acid Metabolism .................................................................................................................. 87
   Gary B. Gordon, Gary J. Kelloff, and Caroline C. Sigman

6 Cyclooxygenase-2 Inhibitors and Colorectal Cancer Prevention ............................................................. 107
   Raymond N. DuBois

7 Lipoxygenases as Targets for Cancer Prevention .................................................................................... 115
   Susan M. Fischer and Russell D. Klein

8 Inducible Nitric Oxide Synthase as a Target for Chemoprevention ................................................... 133
   Lorne J. Hofseth, Tomohiro Sawa, S. Perwez Hussain, and Curtis C. Harris

9 Chemoprevention of Cancer of the Respiratory Tract by Agents Delivered by Aerosol:
   Applications to Glucocorticoids and 5-Fluorouracil .............................................................................. 153
   Timothy S. Wiedmann and Lee W. Wattenberg

10 Chemoprevention of Cancer by Curcumin ............................................................................................. 169
   Bandaru S. Reddy and Chinthalapally V. Rao

PART III. NUCLEAR RECEPTOR SUPERFAMILY

11 Nuclear Receptor Superfamily: Targets for Chemoprevention ........................................................... 195
   Julia A. Lawrence and Kapil Dhingra

A. Antiandrogens

12 Prostate Cancer Chemoprevention: 5α-Reductase Inhibitors ............................................................... 211
   Jennifer E. Drisko and Siu-Long Yoo

13 Searching for SARA: The Role of Selective Androgen-Receptor Antagonists in Prostate Cancer .... 219
   Mark S. Chapman, William Y. Chang, Andrés Negro-Vilar, and Jeffrey N. Miner

<tbody>
<tr>
<td>B. Antiestrogens</td>
</tr>
<tr>
<td>15 Aromatase Inhibitors as Chemopreventives of Breast Cancer</td>
</tr>
<tr>
<td>16 Breast Cancer Chemoprevention by Selective Estrogen Receptor Modulators</td>
</tr>
<tr>
<td>C. Natural Vitamin D and Synthetic Analogs</td>
</tr>
<tr>
<td>17 Chemopreventive Efficacy of Natural Vitamin D and Synthetic Analogs</td>
</tr>
<tr>
<td>D. Retinoids</td>
</tr>
<tr>
<td>18 The Retinoids and Cancer Chemoprevention</td>
</tr>
<tr>
<td>E. Dehydroepiandrosterone and Structural Analogs</td>
</tr>
<tr>
<td>19 Biologic and Therapeutic Effects of Dehydroepiandrosterone and Structural Analogs</td>
</tr>
<tr>
<td>PART IV. SIGNAL TRANSDUCTION MODULATORS</td>
</tr>
<tr>
<td>20 ras Oncogene Inhibitors</td>
</tr>
<tr>
<td>21 The Potential of EGFR-Targeted Agents in Cancer Prevention</td>
</tr>
<tr>
<td>22 Pharmacological Intervention with Multistep Oncogenesis: Potential Role for HSP90 Molecular Chaperone Inhibitors</td>
</tr>
<tr>
<td>23 Therapeutic Strategies Targeting Polyamines</td>
</tr>
<tr>
<td>24 The Role of Phytoestrogens as Cancer Prevention Agents</td>
</tr>
<tr>
<td>25 Cancer Chemopreventive Activity of Monoterpenes and Other Isoprenoids</td>
</tr>
<tr>
<td>26 Development of an Inhibitor of raf Kinase</td>
</tr>
<tr>
<td>27 Abnormalities in Cell Cycle Control in Human Cancer and Their Relevance to Chemoprevention</td>
</tr>
<tr>
<td>28 Select Cyclic Nucleotide Phosphodiesterase Inhibitors in Colon Tumor Chemoprevention and Chemotherapy</td>
</tr>
<tr>
<td>PART V. ANTIOXIDANTS, VITAMINS, AND MINERALS</td>
</tr>
<tr>
<td>29 Chemoprevention by Fruit Phenolic Compounds</td>
</tr>
<tr>
<td>30 Tea Polyphenols as Cancer Chemopreventive Agents</td>
</tr>
<tr>
<td>31 Vitamin E as a Cancer Chemopreventive Agent</td>
</tr>
<tr>
<td>32 Vitamin C as a Cancer Chemopreventive Agent</td>
</tr>
<tr>
<td>33 Carotenoids</td>
</tr>
</tbody>
</table>
34 Lycopene, a Dietary Cancer Chemopreventive Agent ................................................................. 525
   Andreas I. Constantinou and Richard B. van Breemen
35 Not All Chemopreventive Selenium Compounds are Created Equal ............................................. 537
   Karam El-Bayoumy
36 Calcium ............................................................................................................................................ 547
   John A. Baron
37 Folate and Cancer Chemoprevention ............................................................................................... 559
   Shumin M. Zhang and Walter C. Willett
38 Conjugated Linoleic Acid as a Tumor Preventive Agent ................................................................. 583
   David Kritchevsky and Michael W. Pariza
39 Chemopreventive Effects of Omega-3 Fatty Acids ....................................................................... 591
   Joanne R. Lupton and Robert S. Chapkin

PART VI. AGENTS TARGETING BIOLOGICAL PROCESSES IMPORTANT IN CANCER

40 Tumor Angiogenesis as a Target for Early Intervention and Cancer Prevention ............................ 611
   William W. Li
41 Proteasome Inhibitors in Cancer Therapy ....................................................................................... 635
   Julian Adams
42 Modulation of DNA Methylation for the Treatment and Prevention of Cancer ................................ 643
   David S. Schrump
43 Targeting Histone Deacetylase as a Strategy for Cancer Prevention ................................................ 659
   Ho Jung Oh, Eun Joo Chung, Sunmin Lee, Andrea Loaiza-Perez, Edward A. Sausville,
   and Jane B. Trepel

Index ...................................................................................................................................................... 679
Cancer Chemoprevention
Volume 1: Promising Cancer Chemopreventive Agents
Kelloff, G.J.; Hawk, E.T.; Sigman, C.C. (Eds.)
2004, XVI, 697 p. 59 illus., 1 illus. in color., Hardcover
A product of Humana Press
