Contents

Preface .......................................................................................................................... v
Contributors ................................................................................................................. xiii

PART I. MODELS OF HYPERTENSION
  1 Congenic/Consomic Models of Hypertension
     Delyth Graham, Martin W. McBride, Nicholas J. R. Brain, and Anna F. Dominiczak .................................................. 3
  2 Mouse Knockout Models of Hypertension
     Michael Bader .................................................................................................. 17
  3 Production of Transgenic Models in Hypertension
     Elena Popova, Michael Bader, and Alexander Krivokharchenko .......... 33
  4 Measuring Blood Pressure in Small Laboratory Animals
     Klaas Kramer and René Remie ..................................................................... 51

PART II. ASSESSMENT OF FREE RADICALS IN ENDOTHELIAL DYSFUNCTION
  5 Analysis of Superoxide Anion Production in Tissue
     Michela Zanetti, Livius V. d’Uscio, Timothy E. Peterson, Zvonimir S. Katusic, and Timothy O’Brien ............................. 65
  6 Measurement of Vascular Reactive Oxygen Species Production by Chemiluminescence
     Tomasz J. Guzik and Keith M. Channon ....................................................... 73
  7 A Guide to Wire Myography
     Angela Spiers and Neal Padmanabhan .......................................................... 91

PART III. NUCLEIC ACID TECHNIQUES
  8 Selection of Candidate Genes in Hypertension
     Charles A. Mein, Mark J. Caulfield, and Patricia B. Munroe ............... 107
  9 Genome-Wide Scanning With SSLPs in the Rat
     Carol Moreno, Kathleen Kennedy, Jaime Wendt Andrae, and Howard J. Jacob .......................................................... 131
 10 Extraction of RNA From Cells and Tissue
     Ian M. Bird .......................................................................................... 139
 11 Single-Strand Conformational Polymorphism Analysis:
     Basic Principles and Routine Practice
     Yanbin Dong and Haidong Zhu .................................................................... 149

</table>
25 Modulation of Gene Expression by RNAi
   Cezary Wójcik, Rosalind Fabunmi, and George N. DeMartino ........ 381

26 In Vivo Biopanning:
   A Methodological Approach to Identifying Novel Targeting
   Ligands for Delivery of Biological Agents to the Vasculature
   Lorraine M. Work, Campbell G. Nicol, Laura Denby,
   and Andrew H. Baker .............................................................. 395

PART VI. STEM CELLS

27 Cardiomyocytes Derived From Embryonic Stem Cells
   Kenneth R. Boheler, David G. Crider, Yelena Tarasova,
   and Victor A. Maltsev ......................................................... 417

PART VII. BIOINFORMATICS

28 In Silico and Wet-Bench Identification of Nuclear Matrix
   Attachment Regions
   Stephen A. Krawetz, Sorin Draghici, Robert Goodrich,
   Zhandong Liu, and G. Charles Ostermeier .............................. 439

29 Biomedical Informatics Methods in Pharmacogenomics
   Qing Yan .................................................................................. 459
