# Contents

**Preface** ............................................................. v  
**Contributors** ......................................................... ix  

1. Cell-Free Protein Preparation Through Prokaryotic  
   Transcription–Translation Methods. .............................. 1  
   *Takanori Kigawa*  

2. PURE Technology .................................................. 11  
   *Yoshiiro Shimizu and Takuya Ueda*  

3. The Cell-Free Protein Synthesis System from Wheat Germ ........................................ 23  
   *Kazuyuki Takai and Yaeta Endo*  

4. A Cell-Free Protein Synthesis System from Insect Cells ............................................. 31  
   *Toru Ezure, Takashi Suzuki, Masamitsu Shikata, Masaaki Ito,  
   and Eiji Ando*  

5. Cell-Free Protein Synthesis Systems with Extracts from Cultured  
   Human Cells .......................................................... 43  
   *Satoshi Mikami, Tominari Kobayashi, and Hiroaki Imataka*  

6. Analysis of Protein Functions Through a Bacterial Cell-Free Protein  
   Expression System .................................................. 53  
   *Takanori Kigawa*  

7. Cell-Free-Based Protein Microarray Technology Using Agarose/  
   DNA Microplate ...................................................... 63  
   *Tatsuya Sawasaki and Yaeta Endo*  

8. An Efficient Approach to the Production of Vaccines Against  
   the Malaria Parasite. .................................................... 73  
   *Takafumi Tsuboi, Satoru Takeo, Tatsuya Sawasaki, Motomi Torii,  
   and Yaeta Endo*  

9. Protein Engineering Accelerated by Cell-Free Technology ............................................. 85  
   *Takuya Kanno and Yuzuru Tozawa*  

10. Cell-Free Protein Production System with the *E. coli* Crude Extract  
    for Determination of Protein Folds .................................. 101  
    *Takanori Kigawa*  

11. NMR Assignment Method for Amide Signals with Cell-Free Protein  
    Synthesis System .................................................... 113  
    *Toshiyuki Kohno*  

12. Cell-Free Protein Synthesis Technology in NMR High-Throughput  
    Structure Determination ............................................. 127  
    *Shin-ichi Makino, Michael A. Goren, Brian G. Fox, and John L. Markley*  

13. Cell-Free Protein Synthesis for Structure Determination by X-ray  
    Crystallography ..................................................... 149  
    *Miki Watanabe, Ken-ichi Miyazono, Masaru Tanokura,  
    Tatsuya Sawasaki, Yaeta Endo, and Ichizo Kobayashi*  

14 Production of Multi-Subunit Complexes on Liposome Through an *E. coli* Cell-Free Expression System ................................................. 161
   *Yutetsu Kuruma, Toshiharu Suzuki, and Takuya Ueda*

15 Synthesis of a Hetero Subunit RNA Modification Enzyme by the Wheat Germ Cell-Free Translation System ........................................... 173
   *Hiroyuki Hori*

16 Strategies for the Cell-Free Expression of Membrane Proteins ................................................................. 187
   *Sina Reckel, Solmaz Sobhanifar, Florian Durst, Frank Löhr, Vladimir A. Sbirokov, Volker Dötsch, and Frank Bernhard*

17 Production of Membrane Proteins Through the Wheat-Germ Cell-Free Technology ......................................................... 213
   *Akira Nozawa, Hideaki Nanamiya, and Yuzuru Tozawa*

18 Ribosome Display with the PURE Technology ................................................................. 219
   *Takuya Ueda, Takashi Kanamori, and Hiroyuki Ohashi*

19 Incorporation of 3-Azidotyrosine into Proteins Through Engineering Yeast Tyrosyl-tRNA Synthetase and Its Application to Site-Selective Protein Modification ........................................................................ 227
   *Takashi Yokogawa, Satoshi Ohno, and Kazuya Nishikawa*

20 Synthesis of Functional Proteins Within Liposomes ........................................................................... 243
   *Takeshi Sunami, Tomoaki Matsuura, Hiroaki Suzuki, and Tetsuya Yomo*

Index .................................................................................................................. 257
Cell-Free Protein Production
Methods and Protocols
Endo, Y.; Takai, K.; Ueda, T. (Eds.)
2010, XI, 261 p., Hardcover
A product of Humana Press
