## Contents

### Part I  Ion Channels in the Pulmonary Vasculature:
Basics and New Findings

**The Role of Ion Channels in Hypoxic Pulmonary Vasoconstriction** ........ 3  
E. Kenneth Weir, Jésus A. Cabrera, Saswati Mahapatra,  
Douglas A. Peterson, and Zhigang Hong

**Two-Pore Domain K⁺ Channels and Their Role in Chemoreception** ........ 15  
Keith J. Buckler

**Intricate Interaction Between Store-Operated Calcium Entry and Calcium-Activated Chloride Channels in Pulmonary Artery Smooth Muscle Cells** ................................................................. 31  
Abigail S. Forrest, Jeff E. Angermann, Rajesh Raghunathan,  
Catherine Lachendro, Iain A. Greenwood, and Normand Leblanc

**The Role of Intracellular Ion Channels in Regulating Cytoplasmic Calcium in Pulmonary Arterial Smooth Muscle: Which Store and Where?** ................................................................. 57  
A. Mark Evans

**Ca²⁺ Oscillations Regulate Contraction Of Intrapulmonary Smooth Muscle Cells** ........................................................................................................ 77  
Michael J. Sanderson, Yan Bai, and Jose Perez-Zoghbi

### Part II  TRP Channels in the Pulmonary Vasculature:
Basics and New Findings

**Introduction to TRP Channels: Structure, Function, and Regulation** ................................................................. 99  
Michael Y. Song and Jason X.-J. Yuan
Physiological Functions of Transient Receptor Potential Channels in Pulmonary Arterial Smooth Muscle Cells ............................... 109
Xiao-Ru Yang, Mo-Jun Lin, and James S. K. Sham

The Contribution of TRPC1 and STIM1 to Capacitative Ca\(^{2+}\) Entry in Pulmonary Artery .......................................................... 123
Lih Chyuan Ng, Judith A. Airey, and Joseph R. Hume

Store-Operated Calcium Entry Channels in Pulmonary Endothelium: The Emerging Story of TRPC5 and Orai1 ......................... 137
Donna L. Cioffi, Christina Barry, and Troy Stevens

TRPM2 Channel Regulates Endothelial Barrier Function .................. 155
Claudie M. Hecquet, Gias U. Ahmmed, and Asrar B. Malik

Part III Pathogenic Role of Ion Channels in Pulmonary Vascular Disease

A Proposed Mitochondrial–Metabolic Mechanism for Initiation and Maintenance of Pulmonary Arterial Hypertension in Fawn-Hooded Rats: The Warburg Model of Pulmonary Arterial Hypertension ................................................................. 171
Jalees Rehman and Stephen L. Archer

The Role of Classical Transient Receptor Potential Channels in the Regulation of Hypoxic Pulmonary Vasoconstriction ................................................................. 187
B. Fuchs, A. Dietrich, T. Gudermann, H. Kalwa, F. Grimminger, and N. Weissmann

Developmental Regulation of Oxygen Sensing and Ion Channels in the Pulmonary Vasculature .................................................... 201
David N. Cornfield

Hypoxic Regulation of Ion Channels and Transporters in Pulmonary Vascular Smooth Muscle ......................................................... 221
Larissa A. Shimoda

CLC-3 Chloride Channels in the Pulmonary Vasculature .................. 237
Joseph R. Hume, Ge-Xin Wang, Jun Yamazaki, Lih Chyuan Ng, and Dayue Duan
Part IV Receptors and Signaling Cascades in Pulmonary Arterial Hypertension

Role of Bone Morphogenetic Protein Receptors in the Development of Pulmonary Arterial Hypertension ........................................ 251
Nicholas W. Morrell

Cross Talk Between Smad, MAPK, and Actin in the Etiology of Pulmonary Arterial Hypertension ............................................................ 265
James West

Notch Signaling in Pulmonary Hypertension ........................................ 279
Patricia A. Thistlethwaite, Xiaodong Li, and Xiaoxue Zhang

Rho Kinase-Mediated Vasoconstriction in Pulmonary Hypertension ................................................................................................. 299
Ivan F. McMurtry, Kohtaro Abe, Hiroki Ota, Karen A. Fagan, and Masahiko Oka

The Serotonin Hypothesis of Pulmonary Hypertension Revisited ............ 309
Margaret R. MacLean and Yvonne Dempsie

Impaired Vascular Endothelial Growth Factor Signaling in the Pathogenesis of Neonatal Pulmonary Vascular Disease .................... 323
Steven H. Abman

Part V Receptors and Transporters: Role in Cell Function and Hypoxic Pulmonary Vasoconstriction

Mitochondrial Regulation of Oxygen Sensing ................................................................. 339
Navdeep S. Chandel

Reactive Oxygen Species and RhoA Signaling in Vascular Smooth Muscle: Role in Chronic Hypoxia-Induced Pulmonary Hypertension ........................................................................................................... 355
Thomas C. Resta, Brad R. S. Broughton, and Nikki L. Jernigan

Polyamine Regulatory Pathways as Pharmacologic Targets in Pulmonary Arterial Hypertension .................................................. 375
Mark N. Gillespie, and Jack W. Olson

5-HT Receptors and K+ Channel Internalization ........................................ 391
Angel Cogolludo and Francisco Perez-Vizcaino
Part VI  Targeting Ion Channels and Membrane Receptors in Developing Novel Therapeutic Approaches for Pulmonary Vascular Disease

KCNQ Potassium Channels: New Targets for Pulmonary Vasodilator Drugs? ......................................................................................................................... 405
Alison M. Gurney, Shreena Joshi, and Boris Manoury

Receptor Tyrosine Kinase Inhibitors in Rodent Pulmonary Hypertension ................................................................. 419
Liliana Moreno-Vinasco and Joe G. N. Garcia

PDGF Receptor and its Antagonists: Role in Treatment of PAH .......... 435
Friedrich Grimminger and Ralph Theo Schermuly

PPARγ and the Pathobiology of Pulmonary Arterial Hypertension ........... 447
Marlene Rabinovitch

Targeting TASK-1 Channels as a Therapeutic Approach ....................... 459
Andrea Olschewski

Pharmacological Targets for Pulmonary Vascular Disease: Vasodilation versus Anti-Remodelling ................................................................. 475
Matthew Thomas

Index .............................................................................................................................................................................. 491
Membrane Receptors, Channels and Transporters in Pulmonary Circulation
Yuan, J.X.-J.; Ward, J.P.T. (Eds.)
2010, XVI, 501 p., Hardcover
A product of Humana Press
