## Contents

Preface ...................................................................................................................... v
Contributors ............................................................................................................. ix

1 Contemporary Approaches to Alzheimer’s Disease and Frontotemporal Dementia ................................................................. 1
   *Erik D. Roberson*

### Part I Working with AD- and FTD-Related Molecules

2 Preparing Synthetic A\(_\beta\) in Different Aggregation States ........................................ 13
   *W. Blaine Stine, Lisa Jungbauer, Chunjiang Yu, and Mary Jo LaDu*

3 Isolation of Low-\(n\) Amyloid \(\beta\)-Protein Oligomers from Cultured Cells, CSF, and Brain ........................................... 33
   *Ganesh M. Shankar, Alfred T. Welzel, Jessica M. McDonald, Dennis J. Selkoe, and Dominic M. Walsh*

4 Detecting A\(\beta\)*56 Oligomers in Brain Tissues .............................................. 45
   *Matthew A. Sherman and Sylvain E. Lesné*

5 Assessing A\(\beta\) Aggregation State by Atomic Force Microscopy .......................... 57
   *Justin Legleiter*

6 Measuring APP Carboxy-Terminal Fragments .................................................. 71
   *Luke A. Esposito*

7 Detection of APP Intracellular Domain in Brain Tissue ............................. 85
   *Sanjay W. Pimplikar and Anupama Suryanarayana*

8 Cell-Based Assays for Regulators of Tau Biology ............................................ 93
   *Umesh K. Jinwal and Chad A. Dickey*

9 Split GFP Complementation Assay for Quantitative Measurement of Tau Aggregation In Situ .................................................. 109
   *Wanjoo Chun, Geoffrey S. Waldo, and Gail V.W. Johnson*

10 Apolipoprotein E Expression and Purification ................................................. 125
    *Tvonne Newhouse and Karl H. Weisgraber*

### Part II Model Systems and Outcome Measures

11 A\(\beta\) Toxicity in Primary Cultured Neurons ................................................ 141
    *Adriana Ferreira, Roxana C. Sinjoanu, Alexandra Nicholson, and Sara Kleinschmidt*

12 Manipulation of Gene Expression in the Central Nervous System with Lentiviral Vectors ......................................................... 155
    *Binggui Sun and Li Gan*
13 Selecting a Mouse Model of Alzheimer’s Disease ............................ 169
   Jeannie Chin

14 Monitoring Spatial Learning and Memory in Alzheimer’s Disease
   Mouse Models Using the Morris Water Maze ............................ 191
   Kimberly Scearce-Levie

15 Step-by-Step In Situ Hybridization Method for Localizing Gene
   Expression Changes in the Brain .................................... 207
   Jorge J. Palop, Erik D. Roberson, and Inma Cobos

16 Real-Time Visualization of Axonal Transport in Neurons .............. 231
   Yasuko Osakada and Bianxiao Cui

17 Quantifying Biomarkers of Cognitive Dysfunction and Neuronal
   Network Hyperexcitability in Mouse Models of Alzheimer’s Disease:
   Depletion of Calcium-Dependent Proteins and Inhibitory
   Hippocampal Remodeling ...................................... 245
   Jorge J. Palop, Lennart Mucke, and Erik D. Roberson

18 Epigenetic Changes in the Brain: Measuring Global Histone Modifications . . . . 263
   Gavin Rumbaugh and Courtney A. Miller

Index ................................................................. 275
Alzheimer's Disease and Frontotemporal Dementia
Methods and Protocols
Roberson, E.D. (Ed.)
2011, X, 270 p., Hardcover
ISBN: 978-1-60761-743-3
