Contents

Preface ......................................................... vii
Contributors ............................................... xi

PART I INTRODUCTION

1 Technological Issues and Experimental Design of Gene Association Studies ........................................... 3
   Johanna K. DiStefano and Darin M. Taverna
2 Statistical Issues in Gene Association Studies ......................... 17
   Richard M. Watanabe
3 Identification of Causal Sequence Variants of Disease in the Next Generation Sequencing Era .................. 37
   Christopher B. Kingsley

PART II METHODS FOR GENE IDENTIFICATION

4 Microarray-Based Genome-Wide Association Studies Using Pooled DNA ........................................... 49
   Szabolcs Szelinger, John V. Pearson, and David W. Craig
5 Medium-Throughput SNP Genotyping Using Mass Spectrometry: Multiplex SNP Genotyping Using the iPLEX® Gold Assay ................. 61
   Meredith P. Millis
6 Targeted SNP Genotyping Using the TaqMan® Assay ..................... 77
   Dorit Schleinitz, Johanna K. DiStefano, and Peter Kovacs
7 Bar-Coded, Multiplexed Sequencing of Targeted DNA Regions Using the Illumina Genome Analyzer ................... 89
   Szabolcs Szelinger, Ahmet Kurdoglu, and David W. Craig

PART III FUNCTIONAL CHARACTERIZATION OF SUSCEPTIBILITY ALLELES AND LOCI

8 Site-Directed Mutagenesis ........................................ 107
   Patricia E. Carrigan, Petek Ballar, and Sukru Tuzmen
9 Gene Expression Profiling of Tissues and Cell Lines: A Dual-Color Microarray Method .......................... 125
   Sonsoles Shack
10 Methods for MicroRNA Microarray Profiling ...................... 145
   Aarati R. Ranade and Glen J. Weiss
11 Allelic Expression Profiling to Dissect Genome-Wide Association Study Signals ............................... 153
   Jonathan D. Gruber
12 Quantitative Polymerase Chain Reaction Using the Comparative $C_q$ Method .......................................................... 171
   Kimberly Yeatts

13 Genomic Analysis by Oligonucleotide Array Comparative Genomic Hybridization Utilizing Formalin-Fixed, Paraffin-Embedded Tissues .......................................................... 185
   Stephanie J. Savage and Galen Hostetter

14 RNA Mapping Protocols: Northern Blot and Amplification of cDNA Ends ......................................................... 199
   Maria Lucrecia Alvarez and Mahtab Nourbakhsh

15 High-Content RNA Interference Assay: Analysis of Tau Hyperphosphorylation as a Generic Paradigm ................. 221
   RiLee H. Robeson and Travis Dunckley

PART IV ALTERNATIVE APPROACHES

16 Integrative Systems Biology Approaches to Identify and Prioritize Disease and Drug Candidate Genes .................. 241
   Vivek Kaimal, Divya Sardana, Eric E. Bardes, Ranga Chandra Gudivada, Jing Chen, and Anil G. Jegga

17 Identification of a Common Variant Affecting Human Episodic Memory Performance Using a Pooled Genome-Wide Association Approach: A Case Study of Disease Gene Identification ........ 261
   Traci L. Pawlowski and Matthew J. Huentelman

18 RNAi-Based Functional Pharmacogenomics ........................................ 271
   Sukru Tuzmen, Pinar Tuzmen, Shilpi Arora, Spyro Mousses, and David Azorsa

19 Genetic Predisposition to β-Thalassemia and Sickle Cell Anemia in Turkey: A Molecular Diagnostic Approach ........ 291
   A. Nazli Basak and Sukru Tuzmen

Index .............................................................. 309
Disease Gene Identification
Methods and Protocols
DiStefano, J.K. (Ed.)
2011, XII, 312 p., Hardcover
A product of Humana Press
