Contents

Preface. ......................................................................................................................... v
Contributors. ................................................................................................................... ix

PART I  ENHANCED APPROACHES TO INHERENT PROBLEMS

1 Isolation of Fungal Infection Structures from Plant Tissue by Flow
   Cytometry for Cell-Specific Transcriptome Analysis. .............................................. 3
   Hiroyuki Takahara, Elmar Endl, and Richard O’Connell

2 Preparation of a High-Quality cDNA Library from a Single-Cell Quantity
   of mRNA Using Chum-RNA .................................................................................. 15
   Hiroshi Nojima and Takahiro Tongan

3 Construction of a Full-Length cDNA Library from Castor Endosperm
   for High-Throughput Functional Screening .......................................................... 37
   Chaofu Lu, James G. Wallis, and John Browse

4 Full-Length Transcriptome Analysis Using a Bias-Free cDNA Library
   Prepared with the Vector-Capping Method ............................................................. 53
   Seishi Kato, Mio Oshikawa, and Kuniyo Ohtoko

5 Construction of Improved Yeast Two-Hybrid Libraries ...................................... 71
   Richard H. Maier, Christina J. Maier, and Kamil Önder

6 Normalization of Full-Length-Enriched cDNA ..................................................... 85
   Ekaterina A. Bogdanova, Ekaterina V. Barsova, Irina A. Shagina,
   Alexander Scheglov, Veronika Anisimova, Laura L. Vagner,
   Sergey A. Lukyanov, and Dmitry A. Shagin

7 Bioinformatic Methods for Finding Differentially Expressed Genes in cDNA
   Libraries, Applied to the Identification of Tumour Vascular Targets ................. 99
   John M.J. Herbert, Dov J. Stekel, Manuela Mura, Michail Sychev,
   and Roy Bicknell

PART II  VISIONARY APPLICATIONS

8 Enzymatic Production of RNAi Libraries from cDNAs and High-Throughput
   Selection of Effective shRNA Expression Constructs ........................................... 123
   Kibtaroh Sugao and Kenzo Hirose

9 Construction of Small RNA cDNA Libraries for High-Throughput
   Sequencing ............................................................................................................. 141
   Cheng Lu and Vikas Shedge

10 Focusing Mutations Within Random Libraries to Distinct Areas:
    Protein Domain Library Generation by Overlap Extension .............................. 153
    Andreas Gratz and Joachim Jose

11 Generation of Families of Construct Variants Using Golden Gate Shuffling ....... 167
    Carola Engler and Sylvestre Marillonnet
