Contents

Preface ................................................................. v
Contributors ......................................................... ix

1 Computational Design of RNA Libraries for In Vitro
   Selection of Aptamers ............................................. 1
   Yaroslav G. Chushak, Jennifer A. Martin, Jorge L. Chávez,
   Nancy Kelley-Loughnane, and Morley O. Stone

2 In Vitro Selection of RNA Aptamers for a Small-Molecule Dye ............ 17
   Asako Murata and Shin-ichi Sato

3 Development of Photoswitchable RNA Aptamer–Ligand Complexes........ 29
   Gosuke Hayashi and Kazuhiko Nakatani

4 Identification of RNA Aptamers Against Recombinant Proteins
   with a Hexa-Histidine Tag ........................................ 41
   Shoji Ohuchi

5 Artificial Riboswitch Selection: A FACS-Based Approach. ................. 57
   Zohaib Ghazi, Casey C. Fowler, and Yingfu Li

6 FRET-Based Optical Assay for Selection of Artificial Riboswitches ........ 77
   Svetlana V. Harbaugh, Molly E. Chapleau, Yaroslav G. Chushak,
   Morley O. Stone, and Nancy Kelley-Loughnane

7 Portable Two-Way Riboswitches: Design and Engineering ................. 93
   Ye Jin and Jian-Dong Huang

8 Generation of Orthogonally Selective Bacterial Riboswitches
   by Targeted Mutagenesis and In Vivo Screening ........................ 107
   Helen A. Vincent, Christopher J. Robinson, Ming-Cheng Wu,
   Neil Dixon, and Jason Micklefield

9 Dual Genetic Selection of Synthetic Riboswitches in Escherichia coli .... 131
   Yoko Nomura and Yohsei Yokobayashi

10 Nucleotide Kinase-Based Selection System for Genetic Switches .......... 141
    Kohei Ike and Daisuke Umeno

11 Measuring Riboswitch Activity In Vitro and in Artificial Cells
    with Purified Transcription–Translation Machinery ........................ 153
    Laura Martini and Sheref S. Mansy

12 Rational Design of Artificial ON-Riboswitches .......................... 165
    Atsushi Ogawa

13 Engineering Protein-Responsive mRNA Switch in Mammalian Cells ....... 183
    Kei Endo and Hirohide Saito
14 Guanine-Tethered Antisense Oligonucleotides as Synthetic Riboregulators .................................................................................. 197
Masaki Hagihara

15 In Vitro Selection of Allosteric Ribozymes that Sense the Bacterial Second Messenger c-di-GMP ........................................... 209
Kazuhiro Furukawa, Hongzhou Gu, and Ronald R. Breaker

16 Dual-Selection for Evolution of In Vivo Functional Aptazymes as Riboswitch Parts ......................................................... 221
Jonathan A. Goler, James M. Carothers, and Jay D. Keasling

17 In Vivo Screening for Aptazyme-Based Bacterial Riboswitches ......................................................................................... 237
Charlotte Rehm and Jörg S. Hartig

18 Engineered Riboswitch as a Gene-Regulatory Platform for Reducing Antibiotic Resistance ............................................. 251
Libing Liu and Shu Wang

19 Construction of Ligand-Responsive MicroRNAs that Operate Through Inhibition of Drosha Processing .......................... 259
Chase L. Beisel, Ryan J. Bloom, and Christina D. Smolke

20 A Three-Dimensional Design Strategy for a Protein-Responsive shRNA Switch ........................................................................ 269
Shunnichi Kashida and Hirohide Saito

Index ................................................................................................................. 287
Artificial Riboswitches
Methods and Protocols
Ogawa, A. (Ed.)
2014, X, 289 p. 75 illus., 45 illus. in color., Hardcover
ISBN: 978-1-62703-754-9
A product of Humana Press
