Part I Issues of Information Technology

1 Introduction ...................................................... 3
  1.1 Preliminaries ................................................ 3
  1.2 General Problem-solving Framework ......................... 5
  1.3 View from Artificial Intelligence Position .................... 7
  1.4 Composite Systems and Problems ............................ 8
  1.5 Basic System Technological Problems ....................... 10
  1.6 Information Support ........................................ 11
  1.7 Summary ................................................... 11

2 Components of Information Technology ......................... 13
  2.1 Properties of Information Technology ....................... 13
  2.2 Information and Hierarchical Structuring ................... 13
    2.2.1 Schemes and Methods .................................... 13
    2.2.2 Approaches to Knowledge Acquisition ................... 15
    2.2.3 Some Hierarchical Information Systems ................ 16
    2.2.4 Our Framework ........................................... 17
  2.3 Decision-making Paradigm .................................. 18
    2.3.1 Decision-making Framework ............................. 18
    2.3.2 Towards Architecture of Decision Support Systems ...... 18
    2.3.3 Four-domain Decision Making ........................... 20
    2.3.4 Basic Structures .......................................... 20
    2.3.5 Multicriteria Ranking .................................... 22
  2.4 Specialist .................................................. 22
    2.4.1 Role of the Specialist ................................. 22
    2.4.2 Professional Levels ..................................... 23
  2.5 Solving Frameworks ......................................... 23
    2.5.1 Search Spaces and Strategies ........................... 23
    2.5.2 Heuristics ............................................... 25
    2.5.3 Metaheuristics .......................................... 26
    2.5.4 Algorithm Systems ....................................... 26
  2.6 Summary ................................................... 28
# Part II System Approaches

3 Systems: Models, Analysis, and Synthesis ................................ 31
   3.1 System, Frames, and Modularity .................................. 31
      3.1.1 System and Structural Modeling .............................. 31
      3.1.2 Two Basic Frames ............................................ 32
      3.1.3 Modular, Component-based Systems .......................... 33
   3.2 System Analysis .................................................... 34
      3.2.1 Principles of System Analysis ............................... 34
      3.2.2 Measurement Issues .......................................... 34
      3.2.3 System Properties, Requirements, and Criteria ............ 35
   3.3 System Synthesis .................................................. 36
      3.3.1 Approaches to System Design/Synthesis ...................... 36
      3.3.2 Hierarchical Morphological Approach ...................... 38
      3.3.3 Towards Efficiency of Combinatorial Synthesis .......... 42
      3.3.4 Multistage Design/Planning: Example ...................... 42
   3.4 Multicriteria Evaluation of Composite Systems .................. 46
      3.4.1 Preliminaries ................................................ 46
      3.4.2 Traditional Approaches to Multicriteria Evaluation ...... 48
      3.4.3 Morphological Clique Problem for Evaluation ............ 50
      3.4.4 Usage of Poset-like Scales for System Components ........ 50
   3.5 Summary .......................................................... 50

4 Issues of Systems Engineering ........................................... 53
   4.1 Life-cycle Engineering ............................................ 53
      4.1.1 Basic Stages of the Life Cycle .............................. 53
      4.1.2 Design/Management Problems and Life Cycle .............. 53
      4.1.3 System Requirements ....................................... 55
      4.1.4 System Design ............................................... 55
      4.1.5 System Redesign and Bottlenecks ........................... 56
   4.2 Maintenance of Composite Systems ................................ 57
   4.3 Multistage/Trajectory Design .................................... 59
      4.3.1 Preliminaries ................................................ 59
      4.3.2 Morphological Scheme of Product ........................... 60
      4.3.3 Multistage Product Trajectory .............................. 61
      4.3.4 Design of Tree-like Trajectory ............................. 63
   4.4 Summary .......................................................... 64

5 System Development and Evolution .................................... 65
   5.1 Preliminaries .................................................... 65
   5.2 Short Survey ..................................................... 66
   5.3 Basic System Models ............................................. 67
   5.4 Combinatorial Operations ....................................... 67
      5.4.1 Change Operations .......................................... 67
      5.4.2 Exchange Operations ....................................... 68
      5.4.3 Binary Relations over Change Operations ................. 69
5.4.4 Multicriteria Description ........................................ 69
5.5 Technological Evolution Problems ................................ 69
5.6 Combinatorial Problems ............................................. 70
  5.6.1 One-stage System Change ...................................... 70
  5.6.2 Multistage System Change .................................... 70
  5.6.3 Auxiliary Problems ........................................... 71
5.7 Extended Cycle of System Evolution ............................... 71
5.8 Applications ....................................................... 71
5.9 Summary ........................................................... 74

6 Configuration and Multi-product Systems ......................... 75
  6.1 Configuration ..................................................... 75
  6.2 Product Family ................................................... 76
  6.3 Multi-product System: Common Modules ....................... 77
    6.3.1 Preliminaries ................................................. 77
    6.3.2 Two-level Hierarchy ........................................ 77
    6.3.3 Structural Models ......................................... 84
    6.3.4 Complex Design Problems .................................. 86
  6.4 Summary .......................................................... 91

Part III Applied Systems Decisions

7 Synthesis of Composite Packaged Software ....................... 95
  7.1 Preliminaries .................................................... 95
  7.2 Approaches to Software Development ........................... 96
  7.3 Criteria for Evaluation of Software ............................ 97
  7.4 Assessment of Interconnection .................................. 97
  7.5 Example of Modular Design ..................................... 98
    7.5.1 Model of Composite Applied Software .................... 98
    7.5.2 Hierarchy of Criteria ..................................... 98
    7.5.3 Comparison of Initial Alternatives for Components .... 99
    7.5.4 Composing of Subsystem Alternatives .................... 99
    7.5.5 Composition and Analysis of System Alternatives ...... 100
    7.5.6 Redundancy of Alternatives ................................ 102
  7.6 Example of Multistage Design .................................. 103
    7.6.1 Aggregation Method ....................................... 104
    7.6.2 Trajectory Method ......................................... 105
  7.7 Summary .......................................................... 106

8 Improvement of Buildings ............................................ 107
  8.1 Evaluation and Redesign of Buildings ......................... 107
  8.2 Scheme for Improvement/Redesign ................................ 109
  8.3 Structure of Building, Criteria, and Scales ................... 110
  8.4 Basic Set of Improvement Actions ............................... 111
  8.5 Numerical Examples ............................................. 113
    8.5.1 Evaluation Example: Integration Tables .................. 113
17.5 Textbooks .................................................. 197
17.6 Summary .................................................. 197

18  Applied Combinatorial Optimization ......................... 199
18.1 Preliminaries .............................................. 199
18.2 Goals and Structure ....................................... 200
18.3 Multi-layer Teaching ....................................... 201
18.4 Lectures and Projects ..................................... 202
18.5 Textbooks .................................................. 204
18.6 Summary .................................................. 204

Conclusion ..................................................... 205

References ..................................................... 207

About the Author ............................................. 247

Index .......................................................... 249
