Contents

1 Introduction .............................................. 1
    1.1 Basic Notions, Background .......................... 1
    1.2 A Short History .................................... 3
    1.3 Control Systems for Vehicles and Robots, Research Motivation . 5
    1.4 Outline of the Following Chapters .................... 7

2 Basic Nonlinear Control Methods .......................... 11
    2.1 Nonlinear System Classes ........................... 11
        2.1.1 State Equation of Nonlinear Systems .............. 12
        2.1.2 Holonomic and Nonholonomic Systems .................. 15
        2.1.3 Differentially Flat Systems ........................ 24
    2.2 Dynamic Model of Simple Systems .................... 30
        2.2.1 Dynamic Model of Inverted Pendulum .................. 30
        2.2.2 Car Active Suspension Model ....................... 33
        2.2.3 The Model of the 2 DOF Robot Arm ................... 35
    2.3 Stability of Nonlinear Systems ...................... 38
        2.3.1 Stability Definitions ............................ 39
        2.3.2 Lyapunov Stability Theorems ....................... 40
        2.3.3 Barbalat Lemmas .................................... 47
        2.3.4 Stability of Interconnected Passive Systems ......... 49
    2.4 Input–Output Linearization ........................... 54
    2.5 Flatness Control ..................................... 57
    2.6 Backstepping ........................................ 60
    2.7 Sliding Control ...................................... 64
        2.7.1 Sliding Control of Second Order Systems ............ 65
        2.7.2 Control Chattering ................................. 67
        2.7.3 Sliding Control of Robot ........................... 70
    2.8 Receding Horizon Control ............................. 71
        2.8.1 Nonlinear Receding Horizon Control .................. 72
        2.8.2 Nonlinear RHC Control of 2D Crane ................... 74
        2.8.3 RHC Based on Linearization at Each Horizon ........ 76
    2.9 Closing Remarks ..................................... 76
3 Dynamic Models of Ground, Aerial and Marine Robots

3.1 Dynamic Model of Rigid Body

3.1.1 Dynamic Model Based on Newton–Euler Equations
3.1.2 Kinematic Model Using Euler (RPY) Angles
3.1.3 Kinematic Model Using Quaternion

3.2 Dynamic Model of Industrial Robot

3.2.1 Recursive Computation of the Kinematic Quantities
3.2.2 Robot Dynamic Model Based on Appell’s Equation
3.2.3 Robot Dynamic Model Based on Lagrange’s Equation
3.2.4 Dynamic Model of SCARA Robot

3.3 Dynamic Model of Car

3.3.1 Nonlinear Model of Car
3.3.2 Input Affine Approximation of the Dynamic Model
3.3.3 Linearized Model for Constant Velocity

3.4 Dynamic Model of Airplane

3.4.1 Coordinate Systems for Navigation
3.4.2 Airplane Kinematics
3.4.3 Airplane Dynamics
3.4.4 Wind-Axes Coordinate System
3.4.5 Gravity Effect
3.4.6 Aerodynamic Forces and Torques
3.4.7 Gyroscopic Effect of Rotary Engine
3.4.8 State Equations of Airplane
3.4.9 Linearization of the Nonlinear Airplane Model
3.4.10 Parametrization of Aerodynamic and Trust Forces and Moments

3.5 Dynamic Model of Surface and Underwater Ships

3.5.1 Rigid Body Equation of Ship
3.5.2 Hydrodynamic Forces and Moments
3.5.3 Restoring Forces and Moments
3.5.4 Ballast Systems
3.5.5 Wind, Wave and Current Models
3.5.6 Kinematic Model
3.5.7 Dynamic Model in Body Frame
3.5.8 Dynamic Model in NED Frame

3.6 Closing Remarks

4 Nonlinear Control of Industrial Robots

4.1 Decentralized Three-Loop Cascade Control

4.1.1 Dynamic Model of DC Motor
4.1.2 Design of Three-Loop Cascade Controller
4.1.3 Approximation of Load Inertia and Disturbance Torque

4.2 Computed Torque Technique

4.3 Nonlinear Decoupling in Cartesian Space

4.3.1 Computation of Equivalent Forces and Torques

9.4.1 Parameter Equivalence with the Tustin Model .......... 312
9.4.2 Modeling Errors ..................................... 313
9.4.3 Incorporating the Dynamic Effects .................... 313
9.5 Backlash in Mechanical Systems ......................... 314
9.6 Closing Remarks ....................................... 317

10 Mechanical Control Systems with Nonsmooth Nonlinearities .... 319
10.1 Switched System Model of Mechanical Systems with Stribeck Friction and Backlash .................................. 319
10.2 Motion Control ......................................... 321
10.2.1 Stabilizing Control .................................. 322
10.2.2 Extension of the Control Law for Tracking ............ 326
10.2.3 Simulation Results .................................. 327
10.3 Friction and Backlash Induced Limit Cycle Around Zero Velocity .......................... 330
10.3.1 Chaotic Measures for Nonlinear Analysis .......... 333
10.3.2 Simulation Measurements .......................... 334
10.4 Friction Generated Limit Cycle Around Stribeck Velocities .... 336
10.4.1 Simulation Results .................................. 339
10.4.2 Experimental Measurements ........................ 339
10.5 Closing Remarks ....................................... 341

11 Model Based Identification and Adaptive Compensation of Nonsmooth Nonlinearities ............................................ 343
11.1 Friction and Backlash Measurement and Identification in Robotic Manipulators .............................................. 343
11.1.1 Friction Measurement and Identification ............ 345
11.1.2 Backlash Measurement ................................ 346
11.1.3 Velocity Control for Measurements .................. 347
11.1.4 Experimental Measurements ........................ 349
11.2 Friction Measurement and Identification in Hydraulic Actuators .... 355
11.2.1 Mathematical Model of Hydraulic Actuators .......... 356
11.2.2 Friction Measurement and Identification ............ 358
11.2.3 Experimental Measurements ........................ 359
11.3 Nonlinear Control of a Ball and Beam System Using Coulomb Friction Compensation ...................................... 363
11.3.1 Adaptive Friction Identification ..................... 366
11.3.2 Nonlinear Control Algorithm for the Ball and Beam System ........................................ 367
11.3.3 Experimental Evaluations .......................... 368
11.4 Adaptive Payload and Friction Compensation in Robotic Manipulators .................................................. 371
11.4.1 Simulation Results—Adaptive Friction Compensation in the Presence of Backlash ............................ 377
11.4.2 Experimental Measurements ........................ 379
11.5 Closing Remarks ....................................... 382
12 Conclusions and Future Research Directions .................. 385
  12.1 Summary .................................................. 385
  12.2 Future Research Directions ............................ 387

Appendix A Kinematic and Dynamic Foundations of Physical Systems .... 389
  A.1 Orientation Description Using Rotations and Quaternion ........ 389
    A.1.1 Homogeneous Transformations .......................... 389
    A.1.2 Orientation Description Using Rotations .............. 391
    A.1.3 Orientation Description Using Quaternion ............ 393
    A.1.4 Solution of the Inverse Orientation Problem ......... 394
  A.2 Differentiation Rule in Moving Coordinate System ............ 396
  A.3 Inertia Parameters of Rigid Objects ....................... 398
  A.4 Lagrange, Appell and Newton–Euler Equations ............... 400
    A.4.1 Lagrange Equation ................................... 402
    A.4.2 Appell Equation ....................................... 403
    A.4.3 Newton–Euler Equations ............................... 404
  A.5 Robot Kinematics .......................................... 406
    A.5.1 Denavit-Hartenberg Form .............................. 406
    A.5.2 Direct Kinematic Problem ............................. 408
    A.5.3 Inverse Kinematic Problem ............................ 410
    A.5.4 Robot Jacobian ....................................... 411

Appendix B Basis of Differential Geometry for Control Problems ........ 417
  B.1 Lie Derivatives, Submanifold, Tangent Space ............... 417
  B.2 Frobenius Theorem ........................................ 422
  B.3 Local Reachability and Observability ...................... 428
  B.4 Input/Output Linearization, Zero Dynamics ................ 439
