Part I Fundamentals of Fractional-order Systems and Controls

1	Introduction	3
1.1	Why Fractional Order?	3
1.2	Brief Historical Overview	7
1.3	Summary	8
2	Fundamentals of Fractional-order Systems	9
2.1	Fractional-order Operators: Definitions and Properties	9
2.1.1	Introduction	9
2.1.2	Fractional-order Integrals	10
2.1.3	Fractional-order Derivatives	10
2.1.4	Laplace and Fourier Transforms	12
2.2	Fractional-order Differential Equations	12
2.2.1	Relaxation and Oscillation Equations	13
2.2.2	Numerical Solutions	15
2.3	Fractional-order Systems	17
2.3.1	Models and Representations	17
2.3.2	Stability	19
2.3.3	Analysis of Time and Frequency Domain Responses	26
2.3.4	Bode's Ideal Loop Transfer Function as Reference System	31
2.4	Summary	34
3	State-space Representation and Analysis	35
3.1	Continuous-time LTI State-space Models	35
3.1.1	Stability Analysis	36
3.1.2	State-space Realizations	37

3.2	Solution of the State Equation of Continuous LTI Commensurate-order Systems	43
3.2.1	Inverse Laplace Transform Method	45
3.2.2	Jordan Matrix Decomposition Method	46
3.2.3	Cayley–Hamilton Method	46
3.3	Controllability of Continuous LTI Commensurate-order Systems	54
3.4	Observability of Continuous LTI Commensurate-order Systems	57
3.5	Discrete-time LTI State-space Models	59
3.5.1	Discrete-time State-space Equivalent Model of a Continuous LTI System	59
3.5.2	Discrete-time State-space Model Based on Finite Differences	60
3.5.3	Discrete-time State-space Model Based on the Expanded State	61
3.6	Solution of the Discrete-time LTI Commensurate-order State Equation	62
3.6.1	Solution of the Homogeneous Discrete-time State Equation	62
3.6.2	Solution of the Complete Discrete-time State Equation	64
3.7	Stability of Discrete-time LTI Commensurate-order Systems	66
3.8	Controllability of Discrete-time LTI Commensurate-order Systems	68
3.8.1	Reachability Conditions	69
3.8.2	Controllability Conditions	70
3.9	Observability of Discrete-time LTI Commensurate-order Systems	71
3.10	Summary	74
4	Fundamentals of Fractional-order Control	75
4.1	Why Fractional-order Control: Historical Review	75
4.2	Generalized Fractional-order Control Actions	77
4.2.1	Integral Action	77
4.2.2	Derivative Action	79
4.3	Generalized PID Controller	81
4.3.1	Classical PID Controller	81
4.3.2	Fractional-order PID Controller	82
4.4	Summary	84

Part II Fractional-order PID-Type Controllers

5 Fractional-order Proportional Integral Controller Tuning for First-order Plus Delay Time Plants 87

5.1 Introduction 88

5.2 F-MIGO: Fractional M_s Constrained Integral Gain Optimization Method 89

5.2.1 Geometric Interpretation of Optimization Problems 92

5.2.2 Numerical Solution of Optimization Problems 93

5.3 Development of the Tuning Rules 96

5.3.1 Introduction to the Method Used 96

5.3.2 Test Batch 96

5.3.3 F-MIGO Applied to the Test Batch 97

5.3.4 Tuning Tables 98

5.3.5 Summary of Tuning Rules 100

5.4 Simulation Results 100

5.4.1 Validity of the F-MIGO Method 100

5.4.2 Three Types of FOPDT Systems 101

5.4.3 Special Systems 103

5.5 Summary 105

6 Fractional-order Proportional Derivative Controller Tuning for Motion Systems 107

6.1 Introduction 107

6.2 Fractional-order PD Controller Design for a Class of Second-order Plants 108

6.2.1 Conventional PD Controllers ($\mu = 1$) 109

6.2.2 Fractional-order PD^μ Controllers 110

6.3 Design Procedure 111

6.4 Simulation Example 111

6.4.1 Step Response Comparison with Varying K_p 112

6.4.2 Ramp Response Comparison with Varying K_p 113

6.5 Experiments 115

6.5.1 Introduction to the Experimental Platform 115

6.5.2 Experimental Model Simulation 116

6.5.3 Experiments on the Dynamometer 118

6.6 Summary 119

7 Fractional-order Proportional Integral Derivative Controllers 121

7.1 Introduction 121

7.2	Design Specifications and Tuning Problem	122
7.3	Experimental Results	125
7.4	Summary	129

Part III Fractional-order Lead-lag Compensators

8	Tuning of Fractional-order Lead-lag Compensators	133
8.1	Introduction	133
8.2	The Design Method	135
8.3	Simulation Results	138
8.4	Summary	140
9	Auto-tuning of Fractional-order Lead-lag Compensators . .	141
9.1	Introduction	141
9.2	Relay Test for Auto-tuning	142
9.3	Design of the Fractional-order Lag Part	144
9.4	Design of the Fractional-order Lead Part	145
9.5	Formulation of the Resulting Controller	147
9.6	Summary	147

Part IV Other Fractional-order Control Strategies

10	Other Robust Control Techniques	151
10.1	CRONE: Commande Robuste d'Ordre Non Entier	151
10.1.1	First Generation CRONE Controller	152
10.1.2	Second Generation CRONE Controller	153
10.1.3	Third Generation CRONE Controller	155
10.2	QFT: Quantitative Feedback Theory	158
10.2.1	Some Preliminaries About QFT	159
10.2.2	Case Study with a Fractional-order Lead-lag Compensator	160
10.2.3	Simulation Results	162
10.3	Summary	163
11	Some Nonlinear Fractional-order Control Strategies	165
11.1	Sliding Mode Control	165
11.1.1	Introduction	165
11.1.2	SMC of the Double Integrator	166
11.1.3	Fractional Sliding	170
11.2	Model Reference Adaptive Control	173
11.2.1	Introduction	173
11.2.2	MRAC: A Brief Review	174

11.2.3 Using Fractional Calculus in MRAC Scheme 175

11.2.4 Concluding Remarks 181

11.3 Reset Control 181

11.3.1 Introduction 181

11.3.2 Reset Integrator 182

11.3.3 Generalized Reset Integrator 183

11.3.4 Fractional Reset Integrator 184

11.3.5 Simulation Results 186

11.4 Summary 188

Part V Implementations of Fractional-order Controllers: Methods and Tools

12 Implementations of Fractional-order Controllers 191

12.1 Continuous-time Implementations of Fractional-order Operators 192

12.1.1 Continued Fraction Approximations 192

12.1.2 Oustaloup Recursive Approximations 193

12.1.3 Modified Oustaloup Filter 195

12.2 Discrete-time Implementation of Fractional-order Operators . . 196

12.2.1 FIR Filter Approximation 198

12.2.2 Discretization Using The Tustin Method with Prewarping 198

12.2.3 Discrete-time Implementation with Step or Impulse Response Invariants 200

12.3 Frequency Response Fitting of Fractional-order Controllers . . 201

12.3.1 Continuous-time Approximation 201

12.3.2 Discrete-time Approximation 202

12.3.3 Transfer Function Approximations to Complicated Fractional-order Controllers 203

12.4 Sub-optimal Approximation of FOTFs 205

12.5 Summary 212

13 Numerical Issues and MATLAB Implementations for Fractional-order Control Systems 213

13.1 Computations in Fractional Calculus 214

13.1.1 Evaluation of Mittag-Leffler functions 214

13.1.2 Evaluations of Fractional-order Derivatives 217

13.1.3 Closed-form Solutions to Linear Fractional-order Differential Equations 221

13.1.4	Analytical Solutions to Linear Fractional-order Differential Equations	224
13.2	Fractional-order Transfer Functions	231
13.2.1	Design of an FOTF Object	232
13.2.2	Modeling Using FOTFs	233
13.2.3	Stability Assessment of FOTFs	237
13.2.4	Numerical Time Domain Analysis	239
13.2.5	Frequency Domain Analysis	241
13.3	Simulation Studies of Fractional-order Nonlinear Systems with Block Diagrams	243
13.3.1	Design of a Fractional-order Operator Block in Simulink	244
13.3.2	Simulation Studies by Examples	245
13.3.3	Validations of Simulation Results	247
13.4	Optimum Controller Design for Fractional-order Systems	248
13.4.1	Optimum Criterion Selection	249
13.4.2	Optimal Controller Design via Optimizations	251
13.4.3	Optimum $PI^\lambda D^\mu$ Controller Design	253
13.5	Summary	256

Part VI Real Applications

14	Systems Identification	259
14.1	Introduction	259
14.2	Frequency Domain Identification of Commensurate-order Systems	260
14.3	Electrochemical Process	261
14.4	Flexible Structure	266
14.5	Summary	271
15	Position Control of a Single-link Flexible Robot	273
15.1	Introduction	274
15.2	Problem Statement	276
15.3	Dynamic Model of the Single-link Flexible Manipulator	279
15.4	General Control Scheme	282
15.4.1	Inner-loop	283
15.4.2	Simplifying-loop	284
15.4.3	Outer-loop	285
15.5	Design of the Outer-loop Controller $R_e(s)$	286
15.5.1	Condition for Constant Phase Margin	287
15.5.2	Condition for Removing the Effects of Disturbance	288
15.5.3	Ideal Response to a Step Command	288

15.5.4	Controller Design	289
15.6	Some Practical Issues	291
15.6.1	Robustness to Higher Vibration Modes (Spillover)	292
15.6.2	Effect of the Non-negligible Inner-loop Dynamics	295
15.6.3	Fractional-order Controller Implementation	296
15.7	Experimental Results	297
15.8	Summary	300
16	Automatic Control of a Hydraulic Canal	301
16.1	Background and Motivations	301
16.2	Description of the Laboratory Hydraulic Canal	304
16.3	Control-oriented Hydraulic Canal Dynamic Model	307
16.4	Design and Experimental Studies of Fractional-order PI Controllers	312
16.4.1	Fractional-order PI Controller Design	312
16.4.2	Time Response of the Fractional-order PI Controller	318
16.4.3	Experiments with the Fractional-order PI Controller	322
16.5	Design and Experimental Studies of PID Controllers	327
16.5.1	Design of a PID Controller	327
16.5.2	Experimental Comparison of the PID Controller and the Fractional-order Controllers	330
16.5.3	Conclusions on the Robust Control of the Laboratory Hydraulic Canal	333
16.6	Control of Hydraulic Canals with Significant Delays	334
16.6.1	Standard Control Scheme	335
16.6.2	Smith Predictor Based Control Scheme	336
16.7	Fractional-order Control of Hydraulic Canals with Significant Delays	339
16.7.1	Design Method for Smith Predictor Based I^λ Controllers (SP-FI)	339
16.7.2	Design Method for Smith Predictor Based PI^λ Controllers (SP-FPI)	339
16.8	Control-oriented Dynamic Model of an IMCP	340
16.9	Comparison of Controllers from Simulation Results	343
16.9.1	Controller Design Specifications for the Nominal Plant	343
16.9.2	Standard PI Controller	344
16.9.3	Smith Predictor Based PI Controller	344
16.9.4	Smith Predictor Based PID Controller	345
16.9.5	Fractional-order I Controller with Smith Predictor	346
16.9.6	Fractional-order PI Controller with Smith Predictor	348

16.9.7	Conclusions on the Robust Control of the IMCP with LTVD	350
16.10	Summary	351
17	Mechatronics	353
17.1	The Experimental Platform	353
17.2	Experimental Tuning of the Control Platform	355
17.2.1	Position Servo	355
17.2.2	Velocity Servo	357
17.3	Experimental Auto-tuning on the Mechatronic Platform	359
17.4	Summary	363
18	Fractional-order Control Strategies for Power Electronic Buck Converters	365
18.1	Introduction	365
18.2	Model of the Buck Converter	367
18.2.1	Discrete Plant Model	368
18.2.2	Linearized Plant Model	369
18.2.3	Real System Model for Design	370
18.3	Linear Fractional-order Control	371
18.3.1	Controller Design Based on the Smith Predictor Structure	371
18.3.2	Controller Design Using Phase-lag Compensation	373
18.3.3	Controller Design Based on the Discrete Linearized Model	374
18.4	Fractional Sliding Mode Control (F_R SMC)	375
18.4.1	Sliding Surfaces Through PID and PI Structures	376
18.4.2	Fractional Sliding Surfaces	378
18.5	Simulation and Experimental Results	381
18.5.1	Simulation Results	381
18.5.2	Experimental Results	384
18.5.3	Robustness Comments on Simulation Results	386
18.6	Summary	387
Appendix Laplace Transforms Involving Fractional and Irrational Operations		391
A.1	Laplace Transforms	391
A.2	Special Functions for Laplace Transform	391
A.3	Laplace Transform Tables	391
