# Contents

1 **Introduction** ................................................................. 1  
   1.1 Networked Control Systems (NCS) .......................... 1  
   1.2 Internet-based Control Systems (ICS) ................. 2  
   1.3 Challenges of NCS/ICS ...................................... 3  
   1.4 Aims of the Book ............................................. 4  
   References .............................................................. 5  

2 **Requirements Specification for Internet-based Control Systems** ........ 7  
   2.1 Introduction ..................................................... 7  
   2.2 Requirements Specification ................................ 7  
   2.3 Functional Modelling of Internet-based Control Systems .......... 9  
   2.4 Information Hierarchy ...................................... 12  
   2.5 Possible Implementation of Information Architecture .......... 14  
   2.6 Summary ..................................................... 15  
   References .............................................................. 16  

3 **Internet-based Control System Architecture Design** .................. 17  
   3.1 Introduction ..................................................... 17  
   3.2 Traditional Bilateral Tele-operation Systems ............. 17  
   3.3 Remote Control over the Internet .......................... 21  
   3.4 Canonical Internet-based Control System Structures ........ 24  
   3.5 Summary ..................................................... 26  
   References .............................................................. 26  

4 **Web-based User Interface Design** ........................................ 29  
   4.1 Features of Web-based User Interface .................... 29  
   4.2 Multimedia User Interface Design .......................... 29  
   4.3 Case Study .................................................... 31  
      4.3.1 System Architecture .................................... 31  
      4.3.2 Design Principles ...................................... 33
5 Real-time Data Transfer over the Internet

5.1 Real-time Data Processing

5.1.1 Features of Real-time Data Transfer

5.1.2 Light and Heavy Data

5.2 Data Wrapped with XML

5.2.1 Structure Mapping

5.2.2 Data Mapping

5.3 Real-time Data Transfer Mechanism

5.3.1 RMI-based Data Transfer Structure

5.3.2 Data Object Priority

5.4 Case Study

5.4.1 System Description

5.4.2 Priority of Data Transfer

5.4.3 Implementation

5.4.4 Simulation Results and Analysis

5.4.5 Advantages of RMI-based Data Transfer

5.5 Summary

6 Dealing with Internet Transmission Delay and Data Loss from the Network View

6.1 Requirements of Network Infrastructure for Internet-based Control

6.1.1 Six Requirements for Ideal Network Infrastructure for Internet-based Control

6.2 Features of Internet Communication

6.3 Comparison of TCP and UDP

6.4 Network Infrastructure for Internet-based Control

6.4.1 Real-time Control Protocol

6.4.2 Quality Service Provider and Time Synchronization

6.5 Typical Implementation for Internet-based Control

6.5.1 Experimental Set-up

6.5.2 Implementation

6.6 Summary

7 Dealing with Internet Transmission Delay and Data Loss from the Control Perspective

7.1 Overcoming the Internet Transmission Delay

7.2 Control Structure with the Operator Located Remotely
12.3 Integrated Environments ........................................ 171
  12.3.1 Interaction Between Real World and Virtual World .... 171
  12.3.2 Available Integrated Frameworks ....................... 173
  12.3.3 Architecture of a General Integrated Environment ...... 177
12.4 A Typical Implementation of the General Integrated Environment ........................................ 178
  12.4.1 Design Workbench ........................................ 180
  12.4.2 Implementing a New Design of a Controller .......... 182
  12.4.3 Collaboration in the Integrated Environment .......... 185
12.5 Case Study ..................................................... 187
  12.5.1 Workbench for Testing ................................. 188
  12.5.2 Testing the Model and the Controller of the Water Tank at the Workbench ....................... 188
  12.5.3 Installation of the New Design of Real Controllers .... 190
12.6 Summary ...................................................... 192
References ......................................................... 193

13 Conclusion ....................................................... 195
  13.1 Summary ..................................................... 195
  13.2 Future Work .................................................. 196
References ......................................................... 197

Index ............................................................... 199
Internet-based Control Systems
Design and Applications
Yang, S.-H.
2011, XX, 204 p., Hardcover
