Preface

This edited book is a result of the EU FP7 project ProSense (Promote, Mobilize, Reinforce and Integrate Wireless Sensor Networking Research and Researchers: Towards Pervasive Networking of West Balkan Countries and the EU, grant agreement 205494) related to wireless sensor networks (WSN). All the authors of specific chapters in this book have contributed to the project in the period March 2008–March 2010. Working on the project, they had a chance to master the specific domains of this newly emerging field, which enables this book to represent a wholistic coverage of WSN. Chapters are lined up according to the topic they cover, and the authors of the chapters are lined up according to the size of their contribution. The five editors of the book (listed in alphabetical order) are Liljana Gavrilovska, Srdjan Krco, Veljko Milutinovic, Ivan Stojmenovic, and Roman Trobec.

Their major role was to help create the overall structure of the book and to help the talents of the contributing authors to generate their best. They are responsible for the final quality control, having in mind that one of the major purposes of the book is to serve as a support for the educational process at universities. They are also responsible for inducing creativity among young researchers on the project, along the lines expressed by Martin Perl in his foreword.

December 2009
