Introduction ........................................................................................................ 1
  What is Component-Based Business? ............................................................... 2
  Who is doing component-based business? ...................................................... 6
  What are the potential benefits and risks? ...................................................... 7
  What is the potential scope for component-based business? ......................... 8
  Pitfalls, risks & nightmare scenarios. ............................................................. 10
  Tips & best practices. ..................................................................................... 10
  About the book – and other resources. .......................................................... 11
  Thanks .......................................................................................................... 13

1. Building Blocks ........................................................................................... 13
    A large range of manufactured products can be built from pre-existing (and potentially
    interchangeable) components. ................................................................. 14
    Complex systems and artefacts can be explained by decomposing them into
    components. ......................................................................................... 14
    Increasingly, IT solutions are constructed from software components. ............ 21
    The next step is to construct a whole business from building blocks. ................ 27
    Against componentry. ............................................................................. 45
    Components are not a choice. They represent a new game ......................... 47
    Recap ....................................................................................................... 47

2. Systems Constructed from Building Blocks ................................................ 49
    There are some common patterns of system success. ............................... 50
    Intelligence and character are desirable properties of systems. .................... 52
    Some systems lack intelligence, character or both. ..................................... 64
    Increasing the componentry of a system increases a property called articulation. 67
    Articulation can alter both intelligence and character. ............................... 72
    Recap ....................................................................................................... 77
The Component-Based Business: Plug and Play
Veryard, R.
2001, VIII, 228 p., Softcover
