PART ONE
Before categorizing someone as treatment-resistant

1 Introduction
Overview
 Definitions
 Measurement tools
 Remission
 Recovery
 Summary
 References

2 A general treatment approach
Using the rubric of evidence-based medicine
The therapeutic alliance
Identifying obstacles
Summary
References

3 Adherence – the great masquerader of treatment-resistance
What is adherence and how common is partial or nonadherence?
Clinical correlates for people at risk for partial or nonadherence
Interview style
Interventions targeting nonadherence
Monitoring adherence
Alternate medication formulations
Summary
References
4 Dosing of antipsychotics – what evidence do we use?  29
   Practice-based evidence  29
   Research-based evidence  30
   Reconciling doses used in clinical practice with those supported
     by clinical research  32
   Summary  32
   References  33

PART TWO
Management approaches

5 Psychopharmacological approaches  37
   Overview  37
   Heterogeneity of antipsychotics  37
   Evidence base for antipsychotic monotherapies  38
   Evidence base for antipsychotic combination therapy  44
   Evidence base for adjunctive nonantipsychotic medications  47
   Summary  51
   References  51

6 Somatic treatments  57
   Summary  59
   References  59

7 Nonpharmacological approaches  61
   Cognitive behavioral therapy and cognitive remediation  61
   Psychosocial rehabilitation, vocational rehabilitation, and
     supported employment  62
   Other approaches  63
   Summary  64
   References  64
