<td>Preface</td>
<td>xi</td>
</tr>
<tr>
<td>Introduction</td>
<td>xiii</td>
</tr>
<tr>
<td>Notation</td>
<td>xix</td>
</tr>
<tr>
<td><strong>1 Elementary properties of holomorphic functions</strong></td>
<td>1</td>
</tr>
<tr>
<td>1.1 Definition and first properties</td>
<td>1</td>
</tr>
<tr>
<td>1.2 The maximum principle</td>
<td>3</td>
</tr>
<tr>
<td>1.3 Contour integrals</td>
<td>8</td>
</tr>
<tr>
<td>1.4 The Cauchy integral theorem</td>
<td>11</td>
</tr>
<tr>
<td>1.5 The Cauchy formula</td>
<td>12</td>
</tr>
<tr>
<td>1.6 The Hahn-Banach criterion</td>
<td>15</td>
</tr>
<tr>
<td>1.7 A criterion for the holomorphy of operator functions</td>
<td>18</td>
</tr>
<tr>
<td>1.8 Power series</td>
<td>19</td>
</tr>
<tr>
<td>1.9 Laurent series</td>
<td>23</td>
</tr>
<tr>
<td>1.10 Isolated singularities</td>
<td>25</td>
</tr>
<tr>
<td>1.11 Comments</td>
<td>28</td>
</tr>
<tr>
<td><strong>2 Solution of $\overline{\partial} u = f$ and applications</strong></td>
<td>29</td>
</tr>
<tr>
<td>2.1 The Pompejju formula for solutions of $\overline{\partial} u = f$ on compact sets</td>
<td>29</td>
</tr>
<tr>
<td>2.2 Runge approximation</td>
<td>37</td>
</tr>
<tr>
<td>2.3 Solution of $\overline{\partial} u = f$ on open sets</td>
<td>41</td>
</tr>
<tr>
<td>2.4 $O^E$-cocycles and the Mittag-Leffler theorem</td>
<td>43</td>
</tr>
<tr>
<td>2.5 Runge approximation for invertible scalar functions and the Weierstrass product theorem</td>
<td>44</td>
</tr>
<tr>
<td>2.6 $O^E$-cocycles with prescribed zeros and a stronger version of the Mittag-Leffler theorem</td>
<td>52</td>
</tr>
<tr>
<td>2.7 Generalization of the Weierstrass product theorem</td>
<td>54</td>
</tr>
<tr>
<td>2.8 Comments</td>
<td>58</td>
</tr>

Contents

6.4 Holomorphic families of subspaces .................................. 185
6.5 Example: A holomorphic family of subspaces with jumping
isomorphism type ......................................................... 201
6.6 Injective families .......................................................... 203
6.7 Shubin families .............................................................. 204
6.8 Complemented families ................................................... 206
6.9 Finite dimensional and finite codimensional families ................. 209
6.10 One-sided and generalized invertible holomorphic operator
functions ................................................................. 211
6.11 Example: A globally non-trivial complemented holomorphic family
of subspaces .......................................................... 214
6.12 Comments ................................................................. 216

7 Plemelj-Muschelishvili factorization .................................... 219
7.1 Definitions and first remarks about factorization ....................... 220
7.2 The algebra of Wiener functions and other splitting $\mathcal{R}$-algebras 222
7.3 Hölder continuous and differentiable functions .......................... 230
7.4 Reduction of the factorization problem to functions, holomorphic
and invertible on $\mathbb{C}^*$ .................................................. 237
7.5 Factorization of holomorphic functions close to the unit .............. 240
7.6 Reduction of the factorization problem to polynomials in $z$ and $1/z$ 240
7.7 The finite dimensional case ............................................. 242
7.8 Factorization of $\mathcal{G}^\infty(E)$-valued functions ..................... 245
7.9 The filtration of an operator function with respect to a contour ..... 251
7.10 A general criterion for the existence of factorizations ............... 259
7.11 Comments ................................................................. 267

8 Wiener-Hopf operators, Toeplitz operators and factorization ........ 269
8.1 Holomorphic operator functions ....................................... 269
8.2 Factorization of $\mathcal{G}^\omega(E)$-valued functions .................... 273
8.3 The space $\mathcal{L}^2(\Gamma, H)$ ........................................... 276
8.4 Operator functions with values acting in a Hilbert space ............. 287
8.5 Functions close to the unit operator or with positive real part ....... 291
8.6 Block Töplitz operators .................................................. 297
8.7 The Fourier transform of $\mathcal{L}^1(\mathbb{R}, E)$ ............................. 305
8.8 The Fourier isometry $U$ of $\mathcal{L}^2(\mathbb{R}, H)$ ......................... 313
8.9 The isometry $V$ from $\mathcal{L}^2(T, H)$ onto $\mathcal{L}^2(\mathbb{R}, H)$ .......... 317
8.10 The algebra of operator functions $L(H) \oplus \mathcal{L}^1(\mathbb{R}, L(H))$ .... 320
8.11 Factorization with respect to the real line ............................ 324
8.12 Wiener-Hopf integral operators in $\mathcal{L}^2([0, \infty[, H)$ .............. 325
8.13 An example .............................................................. 338
8.14 Comments ................................................................. 340
## Contents

9  Multiplicative cocycles with restrictions (F-cocycles)  343
  9.1  F-cocycles .......................................................... 343
  9.2  The main results on cocycles with restrictions. Formulation and reduction to $O_{D,Z,m}$ ........................................... 346
  9.3  The Cartan lemma with restrictions ................................. 347
  9.4  Splitting over simply connected open sets after shrinking .......... 352
  9.5  Runge approximation on simply connected open sets .............. 354
  9.6  Splitting over simply connected open sets without shrinking ..... 358
  9.7  Runge approximation. The general case ............................ 362
  9.8  The Oka-Grauert principle ............................................ 365
  9.9  Comments .............................................................. 367

10 Generalized interpolation problems  369
  10.1  Weierstrass theorems .................................................. 369
  10.2  Right- and two-sided Weierstrass theorems ........................ 371
  10.3  Weierstrass theorems for $G^\infty(E)$- and $G^\omega(E)$-valued functions ..................................................... 374
  10.4  Holomorphic $G^\infty(E)$-valued functions with given principal parts of the inverse ............................................... 377
  10.5  Comments .............................................................. 378

11 Holomorphic equivalence, linearization and diagonalization  379
  11.1  Introductory remarks .................................................. 379
  11.2  Linearization by extension and equivalence ........................ 380
  11.3  Local equivalence ...................................................... 386
  11.4  A theorem on local and global equivalence .......................... 392
  11.5  The finite dimensional case .......................................... 394
  11.6  Local and global equivalence for finite meromorphic Fredholm functions ................................................................. 399
  11.7  Global diagonalization of finite meromorphic Fredholm functions 406
  11.8  Comments .............................................................. 411

Bibliography  413

Index  419
Holomorphic Operator Functions of One Variable and Applications
Methods from Complex Analysis in Several Variables
Gohberg, I.; Leiterer, J.
2009, XX, 424 p., Hardcover
ISBN: 978-3-0346-0125-2
A product of Birkhäuser Basel
