Contents

1 Introduction to Poncelet Porisms .................................. 1
    Acknowledgement ............................................ 9

2 Billiards – First Examples
    2.1 Introduction to billiards .................................. 11
    2.2 Triangular billiards ...................................... 12
    2.3 Billiards within an ellipse .............................. 14
    2.4 Periodic orbits of billiards and Birkhoff’s theorem .... 17
    2.5 Bicentric polygons .................................... 17
    2.6 Poncelet theorem ....................................... 22

3 Hyperelliptic Curves and Their Jacobians
    3.1 Riemann surfaces ....................................... 27
    3.2 Algebraic curves ...................................... 31
    3.3 Normalization theorem ................................ 37
    3.4 Further properties of Riemann surfaces ............... 39
    3.5 Complex tori and elliptic functions .................. 44
    3.6 Hyperelliptic curves .................................. 54
    3.7 Abel’s theorem ....................................... 57
    3.8 Points of finite order on the Jacobian of a hyperelliptic curve .................................. 63

4 Projective Geometry
    4.1 Preliminaries .......................................... 67
    4.2 Conics and quadrics ................................... 69
    4.3 Projective structure on a conic ....................... 71
    4.4 Pencils of conics .................................... 73
    4.5 Quadrics and polarity ................................ 76
    4.6 Polarity and pencils of conics ....................... 78
    4.7 Invariants of pairs of conics ......................... 82
    4.8 Duality. Complete conics ............................. 85
    4.9 Confocal conics ..................................... 88
4.10 Quadrics, their pencils and linear subsets ....... 91
4.11 Confocal quadrics .................................. 95
4.12 (2-2)-correspondences ................................ 99

5 Poncelet Theorem and Cayley’s Condition
5.1 Full Poncelet theorem ............................... 109
5.2 Cayley’s condition .................................. 111
5.3 Another proof of Poncelet’s theorem
and Cayley’s condition ................................. 119
5.4 One generalization of the Poncelet theorem ....... 123
5.5 Poncelet theorem on Liouville surfaces .......... 125
5.6 Poncelet theorem in projective space ............ 129
5.7 Virtual billiard trajectories ........................ 130
5.8 Towards generalization of proof of Cayley’s condition 133

6 Poncelet–Darboux Curves and Siebeck–Marden Theorem
6.1 Preliminaries ........................................ 137
6.2 Isofocal deformations ................................ 143
6.3 \(n\)-volutions, collisions and decomposition of
Poncelet–Darboux curves .............................. 150

7 Ellipsoidal Billiards and Their Periodical Trajectories
7.1 Periodical trajectories inside \(k\) confocal quadrics
in Euclidean space ................................... 165
7.2 Ellipsoidal billiard as a discrete time system .... 173
7.3 Poncelet’s theorem and Cayley’s condition
in the Lobachevsky space ............................ 179
7.4 Topological properties of an elliptical billiard .... 181
7.5 Integrable potential perturbations of
an elliptical billiard .................................... 198

8 Billiard Law and Hyperelliptic Curves
8.1 Generalized Cayley’s curve .......................... 203
8.2 Billiard law and algebraic structure on variety \(\mathcal{A}_g\) .... 204
8.3 \(s\)-weak Poncelet trajectories ........................ 216
8.4 On generalized Weyr’s theorem and the Griffiths–Harris
space Poncelet theorem in higher dimensions .......... 218
8.5 Poncelet–Darboux grid and higher-dimensional
generalizations ........................................ 220

9 Poncelet Theorem and Continued Fractions
9.1 Hyperelliptic Halphen-type continued fractions ....... 229
9.2 Geometric realizations of the \(2 \leftrightarrow g + 1\) dynamics .......... 252
10 Quantum Yang–Baxter Equation and (2-2)-correspondences
10.1 A proof of the Euler theorem. Baxter’s $R$-matrix ............... 259
10.2 Heisenberg quantum ferromagnetic model ...................... 261
10.3 Vacuum vectors and vacuum curves ............................. 263
10.4 Algebraic Bethe Ansatz and Vacuum Vectors .................... 271
10.5 Rank 2 solutions in $(4 \times 4)$ case ............................. 274
10.6 Conclusion .................................................. 276

References .................................................... 279

Index .......................................................... 289
Poncelet Porisms and Beyond
Integrable Billiards, Hyperelliptic Jacobians and Pencils of Quadrics
Dragović, V.; Radnović, M.
2011, VIII, 294 p. 75 illus., 1 illus. in color., Softcover
