Introduction	1
1 The Weyl calculus	13
1.1 An introduction to the usual Weyl calculus	13
1.2 Two composition formulas	26
1.3 The totally radial Weyl calculus	38
2 The Radon transformation and applications	47
2.1 The Radon transformation	48
2.2 Back to the totally radial Weyl calculus	58
2.3 The dual Radon transform of bihomogeneous distributions	62
2.4 The symmetries $\nu \mapsto -\nu$ and $\rho \mapsto 2 - \rho$	73
3 Automorphic functions and automorphic distributions	81
3.1 Automorphic background	82
3.2 Automorphic distributions	92
3.3 The Kloosterman-related series $\zeta_k(s, t)$	99
3.4 About the sharp product of two Eisenstein distributions	104
3.5 The pointwise product of two Eisenstein series	108
3.6 The continuation of ζ_k	114
4 A class of Poincaré series	121
4.1 An automorphic distribution of a Poincaré series type	122
4.2 The automorphic function $f_{\rho, \nu}$	132
4.3 The analytic continuation of $f_{\rho, \nu}$	137
4.4 Asymptotics of $f_{\rho, \nu}(x + iy), y \rightarrow \infty$	145
4.5 The Roelcke-Selberg expansion of $f_{\rho, \nu}$	160
4.6 Incomplete ρ -series	171
4.7 The automorphic measures $ds_{\Sigma}^{(\rho)}$; related work	174
4.8 A duality	182

5	Spectral decomposition of the Poincaré summation process	187
5.1	A universal Poincaré series	188
5.2	Spectral decomposition of the bilinear form \mathfrak{B}	205
5.3	Technicalities and complements	222
6	The totally radial Weyl calculus and arithmetic	233
6.1	Radial functions and measures on \mathbb{R}^n ; the soft calculus	235
6.2	Totally radial operators and arithmetic measures	242
7	Should one generalize the Weyl calculus to an adelic setting ?	251
7.1	Eisenstein distributions with zeros of zeta for parameters	253
7.2	The automorphic distribution $N^{i\pi\mathcal{E}}\mathfrak{Z}_N$ as a symbol	264
7.3	Adeles and ideles	270
7.4	Renormalizing the p -adic Weyl calculus	279
	Index	291
	Index of Notation	291
	Subject Index	293
	Bibliography	295
