## Contents

### PART 1: Brain injury: ICP management and cerebral physiology

  Cerebrovascular reactivity and autonomic drive following traumatic brain injury ........................................... 3

- **Shahsavari, S., McKelvey, T., Skoglund, T., Eriksson Ritzên, C.**
  A comparison between the transfer function of ABP to ICP and compensatory reserve index in TBI .................. 9

  Cranioplasty effect on the cerebral hemodynamics and cardiac function .................................................. 15

  Hyperbaric oxygen therapy for consciousness disturbance following head injury in subacute phase .................. 21

- **Czosnyka, M., Radolovich, D., Balestri, M., Lavinio, A., Hutchinson, P., Timofeev, I., Smielewski, P., Pickard, J.D.**
  Gender-related differences in intracranial hypertension and outcome after traumatic brain injury ................ 25

- **Meier, U., Ahmadi, S., Killeen, T., Al-Zaïn, F.T., Lemee, J.**
  Long term outcomes following decompressive craniectomy for severe head injury ................................... 29

- **Shaw, M., Piper, I., Daley, M.**
  Relationship of a cerebral autoregulatory index with outcome in head injured patients .............................. 33

- **Narayanan, N., Leffler, C.W., Czosnyka, M., Daley, M.L.**
  Assessment of cerebrovascular resistance with model of cerebrovascular pressure transmission .................. 37

- **Turalska, M., Latka, M., Czosnyka, M., Pierzchala, K., West, B.J.**
  Generation of very low frequency cerebral blood flow fluctuations in humans .............................................. 43

- **Schmidt, B., Weinhold, M., Czosnyka, M., May, S.A., Steinmeier, R., Klingelhöfer, J.**
  Accuracy of non-invasive ICP assessment can be increased by an initial individual calibration ...................... 49

- **Wong, G.K.C., Poon, W.S., Ng, S.C.P., Ip, M.**
  The impact of ventricular catheter impregnated with antimicrobial agents on infections in patients with ventricular catheter: interim report ................................................................. 53

- **Aygok, G.A., Marmarou, A., Fatouros, P.P., Kettenmann, B., Bullock, R.M.**
  Assessment of mitochondrial impairment and cerebral blood flow in severe brain injured patients .................. 57

  Mathematical models of cerebral hemodynamics for detection of vasospasm in major cerebral arteries ............ 63

  Intracranial pressure in patients with sepsis ................................................................................................. 71

- **Figaji, A.A., Fieggen, A.G., Argent, A.C., Le Roux, P.D., Peter, J.C.**
  Intracranial pressure and cerebral oxygenation changes after decompressive craniectomy in children with severe traumatic brain injury ................................................................. 77

  Are head injury guidelines changing the outcome of head injured children? A regional investigation ............ 81

- **Minns, R.A., Jones, P.A., Chambers, I.R.**
  Low frequency pressure waves of possible autonomic origin in severely head-injured children ................... 85
PART 2:
Hydrocephalus and cerebrospinal fluid dynamics

Meier, U., Lemcke, J., Al-Zain, F.: Course of disease in patients with idiopathic normal pressure hydrocephalus (iNPH): a follow-up study 3, 4 and 5 years following shunt implantation .................................................. 125

Poon, W.S., Ng, S.C.P., Wong, G.K.C., Wong, L.Y.C., Chan, M.T.V.: Chronic hydrocephalus that requires shunting in aneurysmal subarachnoid haemorrhage [a-SAH]: its impact on clinical outcome ................................................................................................................. 129

Hu, X., Xu, P., Lee, D.J., Paul, V., Bergsneider, M.: Morphological changes of intracranial pressure pulses are correlated with acute dilatation of ventricles ............................................................................................................................. 131

Meier, U., Lemcke, J.: The influence of co-morbidity on the postoperative outcomes of patients with idiopathic normal pressure hydrocephalus (iNPH) ........................................................................................................ 141

Shima, K., Ishihara, S., Tomura, S.: Pathophysiology and diagnosis of spontaneous intracranial hypotension ........................................................................................................................................................................ 153

PART 3:
Advanced neuromonitoring

Ragauskas, A., Daubaris, G., Petkus, V., Sliteris, R., Raisutis, R., Piper, I., Rocka, S., Jarzemska, E., Matijosaitis, V.: Clinical study of craniospinal compliance non-invasive monitoring method ........................................................................................................................................ 165

Shiogai, T., Ikeda, K., Morisaka, A., Nagakane, Y., Mizuno, T., Nakagawa, M., Furuhata, H.: Acetazolamide vasoreactivity evaluated by transcranial power harmonic imaging and Doppler sonography ...................................................................................................................... 177
A new semi-invasive method for two dimensional $pO_2$ measurements of cortical structures

The relationship between intracranial pressure and brain oxygenation following traumatic brain injury in sheep

Dual microdialysis probe monitoring for patients with traumatic brain injury

In vitro comparison of two generations of Licox and Neurotrend catheters

Cerebral metabolism monitoring during hypothermia following resuscitation from cardiopulmonary arrest

Nitric oxide in acute brain injury: a pilot study of NO$_x$ concentrations in human brain microdialysates and their relationship with energy metabolism

The brain monitoring with Information Technology (BrainIT) collaborative network: data validation results

BrainIT collaborative network: analyses from a high time-resolution dataset of head injured patients

Pilot application of fractal characterisation and its response to change on physiological wave forms

The predictive value of ICP as compared to magnetic resonance imaging in comatose patients after head injury

Metabolic disturbance without brain ischemia in traumatic brain injury: A positron emission tomography study

Concordant biology underlies discordant imaging findings: diffusivity behaves differently in grey and white matter post acute neurotrauma

Qualitative aspects of cranial CT perfusion scanning in a mixed neurosurgical patient collective

Study of perfusion in and around cerebral contusions by means of computed tomography

Magnetic resonance measurement of blood and CSF flow rates with phase contrast - normal values, repeatability and CO$_2$ reactivity

Motor trephine syndrome: A mechanistic hypothesis

Biomechanical modeling of decompressive craniectomy in traumatic brain injury
Pickard, J.D., Czosnyka, Z., Czosnyka, M., Owler, B., Higgins, J.N.:  
Coupling of sagittal sinus pressure and cerebrospinal fluid pressure in idiopathic intracranial hypertension - a preliminary report .......................................................... 283

Chambers, I.R., Martin, D., Clark, A., Nicklin, A., Mendelow, A.D., Mitchell, P.:  
The measurement of brain tissue stiffness in-vivo ..................................................... 287

PART 7:  
Stroke, subarachnoid hemorrhage, and intracerebral hematoma

Wang, E., Ho, C.L., Lee, K.K., Ng, I., Ang B.T.:  
Changes in brain biochemistry and oxygenation in the zone surrounding primary intracerebral hemorrhage .................. 293

Ang, B.T., Chan, S.P., Lee, K.K., Ng I.:  
Prediction of early mortality in primary intracerebral hemorrhage in an asian population ........................................... 299

Wong, G.K.-C., Ng, S.C.-P., Chan, M.T.-V., Sun, D.T.-F., Lam, W.W.-M., Lam, J.M.-K., Poon, W.S.:  
Ischemic events after carotid interventions in relation to baseline cerebrovascular reactivity .................................. 305

Karnchanapandh, K.:  
Effect of increased intracranial pressure on cerebral vasospasm in SAH ................................................................. 307

Chieregato, A., Tanfani, A., Noto, A., Fronza, S., Coccioletto, F., Fainardi, E.:  
Cerebral blood flow thresholds predicting new hypoattenuation areas due to macrovascular ischemia during the acute phase of severe and complicated aneurysmal subarachnoid hemorrhage. A preliminary study .................. 311

Qin, Z., Hua, Y., Liu, W., Silbergleit, R., He, Y., Keep, R.F., Hoff, J.T., Xi, G.:  
Hyperbaric oxygen preconditioning activates ribosomal protein S6 kinases and reduces brain swelling after intracerebral hemorrhage .......................................................... 317

Daley, M.L., Narayanan, N., Lefferl, C.W., Eide, P.K.:  
Stroke with subarachnoid hemorrhage: assessment of cerebrovascular pressure regulation and simulated cerebrovascular resistance .................................................. 321

Ayer, R.E., Sugawara, T., Zhang, J.H.:  
Effects of melatonin in early brain injury following subarachnoid hemorrhage .................................................. 327

Wong, G.K., Kung, J., Ng, S.C., Zhu, X.L., Poon, W.S.:  
Decompressive craniectomy for hemispheric infarction: predictive factors for six month rehabilitation outcome .... 331

Wang, E., Ho, C.L., Lee, K.K., Ng, I., Ang B.T.:  
Effects of temperature changes on cerebral biochemistry in spontaneous intracerebral hematoma ................. 335

Zanier, E.R., Longhi, L., Fiorini, M., Cracco, L., Bersano, A., Zoerle, T., Branca, V., Monaco, S., Stocchetti, N.:  
Increased levels of CSF heart-type fatty acid-binding protein and tau protein after aneurysmal subarachnoid hemorrhage. ........ 339

PART 8:  
Experimental studies and models

Zhang, Y., Ang, B.T., Xiao, Z.C., Ng, I.:  
DNA vaccination against neurite growth inhibitors to enhance functional recovery following traumatic brain injury .......... 347

Pluta, R., Januszewski, S., Ulamek, M.:  
Ischemic blood-brain barrier and amyloid in white matter as etiological factors in leukoaraiosis .................. 353

Jadhav, V., Yamaguchi, M., Obenaus, A., Zhang, J.H.:  
Matrix metalloproteinase inhibition attenuates brain edema after surgical brain injury ........................................ 357

Hua, Y., Tang, L., Keep, R.F., Hoff, J.T., Heth, J., Xi, G., Muraszko, K.M.:  
Thrombin enhances glioma growth ............................................ 363

The antioxidant effects of melatonin in surgical brain injury in rats .......................................................... 367

Kolar, M., Pachl, J., Tomasova, H., Haninec, P.:  
Dynamics of matrix-metalloproteinase 9 after brain trauma – results of a pilot study ............................................ 373
Intracranial Pressure and Brain Monitoring XIII
Mechanisms and Treatment
Manley, G.; Hemphill, C.; Stiver, S. (Eds.)
2009, XI, 452 p., Hardcover
