PART I **The Year in Space 2007/2008**

Chapter 1. European space activities in the global context. *Nicolas Peter*

1. Geopolitical trends	2
1.1. Global economic outlook	2
1.2. Political developments.	3
1.2.1. Europe	3
1.2.2. The United States	4
1.2.3. Russia	4
1.2.4. Japan.	5
1.2.5. China	5
1.2.6. India.	6
1.3. International security.	7
1.4. Major scientific achievements	8
1.5. Main science and technology indicators relevant for space activities.	9
1.5.1. Science and technology inputs	9
1.5.2. Science and technology outputs.	10
2. Worldwide space policies and strategies	11
2.1. The United Nations system.	12
2.1.1. United Nations General Assembly Committees	13
2.1.2. Other UN bodies and organs monitoring outer space activities	14
2.2. The Group on Earth Observations	15
2.3. Regional cooperation in space activities	16
2.4. Europe.	17
2.4.1. European Space Agency.	18
2.4.2. European Union	18

2.4.3.	Other European institutions	22
2.4.4.	Eumetsat	23
2.4.5.	National governments	23
2.4.5.1.	France	23
2.4.5.2.	Germany	24
2.4.5.3.	Italy	24
2.4.5.4.	The United Kingdom	25
2.5.	The United States.	26
2.6.	Russia	27
2.7.	Japan	27
2.8.	China	28
2.9.	India	29
2.10.	Emerging space powers	30
3.	Worldwide space budgets and revenues.	32
3.1.	Overview of institutional space budgets	32
3.2.	Overview of commercial space markets.	34
3.3.	Evolution of the space industry	36
3.3.1.	Industrial evolution in Europe	37
3.3.2.	Industrial evolution in the United States	38
3.3.3.	Industrial evolution in Russia	39
3.3.4.	Industrial evolution in Japan	40
3.3.5.	Industrial evolution in China	40
3.4.	Industrial overview	40
3.4.1.	Launch sector	41
3.4.2.	Satellite manufacturing sector	43
3.4.3.	Satellite operators sector	45
4.	The security dimension	46
4.1.	The global space military context	47
4.2.	The European space military context	48
4.3.	The United States.	51
4.4.	Russia	52
4.5.	Japan	53
4.6.	China	53
4.7.	India	54
4.8.	Other space actors	54
4.9.	Threats to the space environment	55

Chapter 2. Developments in space policies, programmes and technologies throughout the world and in Europe.

Nicolas Peter

1. Space policies and programmes	63
1.1. Highlights in activities and programmes.	63
1.2. Highlights in partnerships.	64
2. Space transportation	68
2.1. Europe.	69
2.2. United States	70
2.3. Russia	71
2.4. Japan	72
2.5. China	72
2.6. India	73
2.7. Emerging actors	73
2.8. Industrial comparison	74
3. Space science and exploration.	79
3.1. Human spaceflights activities.	80
3.2. Lunar exploration.	82
3.3. Mars exploration.	84
3.4. Saturn exploration.	86
3.5. Venus exploration.	86
3.6. Mercury exploration	87
3.7. Jupiter observation	87
3.8. Solar observation	87
3.9. Outer solar system space probes.	88
3.10. International cooperation in space exploration.	89
4. Satellite applications	90
4.1. Space-based communications.	90
4.2. Space-based positioning, navigation and timing systems	95
4.3. Space-based Earth observation.	100
5. Technology developments	103
5.1. Propulsion	103
5.2. Information technology.	105
5.3. Spacecraft operations and design	105
5.4. Other technologies	106
5.5. Suborbital activities.	106
5.6. Innovation policy	108

PART 2

Views and Insights

1.	Space in the Treaty of Lisbon. <i>Jan Wouters</i>	116
1.1.	Introduction	116
1.2.	Current constitutional bases for the EU in pace	116
1.3.	Antecedents and context of the Lisbon Treaty	119
1.4.	Analysis of sapec-related provisions in the Lisbon Treaty	120
2.	Galileo and the issue of public funding. <i>Laurence Nardon</i>	125
2.1.	Galileo finally on track	125
2.1.1.	Galileo under EU governance	125
2.1.1.1.	Timeline from June 2007–July 2008	126
2.1.1.2.	The calls for tender	126
2.1.2.	The impact on future European policies	127
2.1.3.	Meanwhile at the ranch: the in-orbit validation process	129
2.2.	A bigger issue: when should taxpayers pay for space?	129
2.2.1.	Space needs public money	129
2.2.1.1.	The case of satellite navigation	130
2.2.2.	Why should governments pay for space? – Defining the National Interest	131
2.2.2.1.	Exhibit A: The UK	132
2.2.2.2.	Exhibit B: The U.S.	132
2.2.3.	Galileo and the national interest	133
2.2.3.1.	Galileo for security	133
2.2.3.2.	Galileo for innovation	135
2.2.3.3.	Galileo for prestige	135
3.	Europe’s approach to Space Situational Awareness: A proposal. <i>Lucia C. Marta and Giovanni Gasparini</i>	138
3.1.	Introduction	138
3.2.	A European Space Situational Awareness programme	139
3.3.	SSA end-users and their requirements	140
3.3.1.	Institutional end-users	140
3.3.2.	Military end-users	141
3.3.3.	Commercial end-users	142
3.3.4.	Scientific end-users	142
3.4.	Some existing models in the space domain for developing a suitable data-policy and governance model	143
3.4.1.	Global Monitoring for Environment and Security (GMES)	143

3.4.2.	Galileo	144
3.4.3.	TerraSar-X	144
3.4.4.	Graves.	145
3.5.	A possible European model for SSA	146
3.6.	Conclusions	149
4.	The European Union proposal for a Code of Conduct on Outer Space Activities. <i>Marcel Dickow</i>	152
4.1.	Good reasons to get active – Why the European Union drafts a Code of Conduct on Outer Space Activities.	152
4.1.1.	Treaty versus Code – The UN discussion process and the academic background	154
4.1.2.	Process or outcome? – The European Union’s objectives and its Member States’ divergent interests.	157
4.2.	“A tightrope walk” – The European Union tackles the space between claim and reality	158
4.2.1.	The contents of the EU Draft CoC	159
4.2.1.1.	General provisions.	159
4.2.1.2.	Co-operation mechanisms	159
4.2.2.	A first appraisal of the CoC	160
5.	International cooperation in space exploration: Lessons from the past and perspectives for the future. <i>Alain Dupas</i>	164
5.1.	Introduction	164
5.2.	The easy part: Robotic exploration.	165
5.2.1.	The fundamental importance of science as a driver of space exploration	165
5.2.2.	The early steps in space cooperation	166
5.2.3.	Basic space cooperation principles	167
5.3.	Human spaceflight and its globalisation	168
5.3.1.	Cold War competition in human spaceflight	168
5.3.2.	The opening of the Space Shuttle programme to international cooperation	168
5.3.3.	The de facto globalisation of human spaceflight.	170
5.4.	The special case of the International Space Station	171
5.4.1.	The origin of the International Space Station programme	171
5.4.2.	The original European human spaceflight strategy of the 1980s	171
5.4.3.	A paradigm shift: Russia joins the International Space Station	172

5.4.4.	The remarkable resilience of the International Space Station	174
5.4.5.	The legal framework of the International Space Station as a model for the future.	175
5.5.	The Vision for Space Exploration (VSE) and the Global Exploration Strategy (GES)	176
5.5.1.	The VSE: A major space policy decision	176
5.5.2.	A very significant step: the establishment of the Global Exploration Strategy	178
5.5.3.	From principles to requirements in the GES Framework	180
5.6.	What model for the future?	182
5.6.1.	The limits of the GES Framework exercise	182
5.6.2.	The case for an integrated framework	184
5.6.3.	Could the ITER model be applied to long-term human space exploration?	184
6.	Exploration – How science finds its way in Europe. <i>Jean-Claude Worms</i>	188
6.1.	Introduction	188
6.2.	What is exploration?	189
6.3.	Consulting the scientific community	190
6.4.	Main recommendations.	191
6.5.	The role of humans	193
6.6.	The international dimension	194
6.7.	The next steps	194
7.	The political dimension of Europe’s new human spaceflight capabilities. <i>Mischa Hansel</i>	196
7.1.	Introduction	196
7.2.	Columbus and the ATV in historical perspective	196
7.3.	Costs and benefits of spaceflight – A framework for analysis	200
7.4.	Looking backward – Political costs and Europe’s involvement in the Space Station programme	202
7.5.	Options for reducing political costs	203
7.6.	Potential benefits of ATV evolution.	206
7.7.	Conclusion.	207
8.	Space technologies and the export control system in the Unites States: Prospects for meaningful reform. <i>Henry R. Hertzfeld</i>	210
8.1.	Executive summary.	210
8.2.	Other types of export controls in the United States.	212
8.3.	Cold War thinking vs. 21 st century reality	213

8.4.	Living with ITAR	215
8.4.1.	Brief history.	215
8.4.2.	The system today.	216
8.5.	ITAR and the space sector	218
8.5.1.	The current system as applied to space technologies . . .	218
8.5.2.	Export control laws and U.S. government space policy	219
8.5.3.	Evidence of the impact of ITAR on the space industry.	220
8.6.	Current effort for reforms	222
8.6.1.	A new bill to reform the administration of the arms export control and for other purposes	222
8.6.2.	Reform of ITAR and the space industrial sector	223
9.	Space for resources. <i>Isabelle Sourbès-Verger</i>	226
9.1.	Introduction	226
9.2.	“Space for Development”: a long-standing and long-term policy.	226
9.2.1.	The well entrenched benefits of space	226
9.2.2.	Major changes in the utilisation of space for resources.	228
9.3.	“GMES and Africa”: a new step in the European space for resources policy.	230
9.3.1.	The need to make the benefits of space technology more universal.	230
9.3.2.	The political significance of space for resources	231
9.4.	Implications for the future.	232
9.4.1.	The geopolitical significance of space for resources . . .	232
9.4.2.	The implications of increasing competition	233
9.5.	Conclusion.	235
10.	The United Nations and outer space: Celebrating 50 years of space achievements. <i>Niklas Hedman and Werner Balogh</i>	237
10.1.	Introduction	237
10.2.	The establishment of the United Nations Committee on the Peaceful Uses of Outer Space.	238
10.3.	The UNISPACE Conferences and capacity building in space technology and applications	242
10.4.	The use of space technology and applications in the United Nations system	245
10.5.	The United Nations and space law: recent trends	246
10.6.	Conclusions	249

PART 3

Facts and Figures

Blandina Baranes and Charlotte Mathieu

1. Chronology: July 2007–June 2008	254
1.1. Access to space	254
1.2. Space science and exploration	258
1.3. Applications	258
1.4. Policy and international cooperation	263
2. Country profiles	265
3. Bibliography of space policy publications July 2007–June 2008	287
3.1. Monographs	287
3.2. Articles	289
List of figures and tables	293
About the Authors	296
Index	304
