# Contents

1 Introduction ............................................................... 1  
1.1 Discovery of Two-Dimensional Carbon Nanostructures ......... 1  
1.2 Brief Description of Carbon Nanowalls ............................... 2  
1.3 Research on Carbon Nanowalls ....................................... 3  
References .................................................................. 5  

2 Preparation Methods ..................................................... 9  
2.1 Microwave Plasma Enhanced Chemical Vapor Deposition ........ 10  
2.2 Inductively Coupled Plasma Enhanced Chemical Vapor Deposition ..................................................... 13  
2.3 Capacitively Coupled Plasma Enhanced Chemical Vapor Deposition with Radical Injection ................................. 16  
2.3.1 RF Plasma-Enhanced CVD with H Radical Injection ........ 17  
2.3.2 VHF Plasma-Enhanced CVD with H Radical Injection ..... 19  
2.4 Electron-Beam-Excited Plasma Enhanced Chemical Vapor Deposition ..................................................... 20  
2.5 Hot Filament Chemical Vapor Deposition ............................ 23  
2.6 Atmospheric Pressure Plasma ........................................ 25  
2.7 Sputtering .................................................................. 26  
References .................................................................. 28  

3 Physics of Carbon Nanowalls ........................................... 31  
3.1 Characterization of Carbon Nanowalls ............................. 31  
3.1.1 SEM and TEM Observation ...................................... 31  
3.1.2 Raman Spectra of Carbon Nanowalls .......................... 34  
3.1.3 Grazing Incidence In-Plane X-ray Diffraction ................. 37  
3.2 Electrical Properties of Carbon Nanowalls ....................... 39  
3.2.1 Field Emission Properties of Carbon Nanowalls ........... 39
3.2.2 Electrical Conduction of Carbon Nanowalls
3.2.3 Electrode for Electrochemistry
References

4 Fabrication of Carbon Nanowalls Using Radical Injection

4.1 Concept of Radical-Controlled Processing
4.2 RF Plasma-Enhanced CVD with H Radical Injection
  4.2.1 Experimental Setup for RF Plasma-Enhanced CVD
      with H Radical Injection
  4.2.2 Measurement of Radical Densities in the Capacitively
      Coupled Plasma Region
  4.2.3 Effect of Carbon Source Gases and H Radicals
      on Carbon Nanowall Growth
  4.2.4 Fabrication of Straight and Aligned Carbon Nanowalls
      with Regular Spacing
4.3 VHF Plasma-Enhanced CVD with H Radical Injection
  4.3.1 Experimental Setup of VHF Plasma-Enhanced
      CVD with H Radical Injection
  4.3.2 Chamber Cleaning for Carbon Nanowall Growth
      with High Reproducibility
  4.3.3 Electrical Conduction Control of Carbon Nanowalls
  4.3.4 Fabrication of Monolithic Self-Sustaining
      Graphene Sheets

5 Growth Mechanism of Carbon Nanowalls

5.1 Measurement of Radical Densities in the Plasma Used
   for the Fabrication of Carbon Nanowalls
  5.1.1 Radicals in Microwave Plasma-Enhanced CVD
       with CH₄/H₂ Mixture
  5.1.2 Radicals in Fluorocarbon Plasma with H Radical
       Injection
  5.1.3 Discussion
5.2 Steady-State Growth of Carbon Nanowalls
  5.2.1 RF Plasma-Enhanced CVD with H Radical Injection
       Employing C₂F₆/H₂ System
  5.2.2 Inductively Coupled Plasma Enhanced CVD Employing
       CH₄/Ar System
  5.2.3 Electron-Beam-Excited Plasma Enhanced CVD
       Employing CH₄/H₂ System
  5.2.4 VHF Plasma-Enhanced CVD with H Radical Injection
       Employing C₂F₆/H₂ System
  5.2.5 Discussion
5.3 Nucleation of Carbon Nanowalls .................................................. 97
  5.3.1 Investigation of Nucleation Stage of Carbon
      Nanowall Growth Employing C₂F₆/H₂ .................................. 97
  5.3.2 Comparison of Carbon Nanowall Growth Employing
      C₂F₆/H₂ with and Without O₂ Gas Addition ...................... 101
  5.3.3 Nucleation Model of Carbon Nanowalls ....................... 105
5.4 Nucleation Mechanism of Carbon Nanowall Growth Under
  Ion Irradiation .......................................................... 107
  5.4.1 Carbon Nanowall Formation Using Multi-Beam CVD
      Technique ..................................................................... 107
  5.4.2 Effect of Ions on the Growth of Carbon Nanowalls ....... 110
5.5 Area-Selective Growth of Carbon Nanowalls ......................... 112
References ........................................................................... 114

6 Field Emission ........................................................................ 117
  6.1 Field Emission Properties of As-Grown Carbon Nanowalls ...... 117
  6.2 Surface Treatment for Improvement of Field Emission Properties 122
      6.2.1 Surface Coating ................................................... 123
      6.2.2 Metal/Carbon Nanowall Composites ....................... 123
      6.2.3 N₂ Plasma Treatment ......................................... 125
References ........................................................................... 127

7 Using Carbon Nanowalls as Templates ...................................... 131
  7.1 Fabrication of Nanostructured Materials Using Carbon
      Nanowalls as Templates .................................................. 131
  7.1.1 Decoration of Carbon Nanowalls ................................. 131
  7.1.2 Fabrication of Nanostructured Materials on Carbon
      Nanowall Templates .................................................. 132
  7.2 Synthesis of Pt Nanoparticles on Carbon Nanowall Surface
      Using Supercritical Fluid Chemical Deposition ................ 138
      7.2.1 Introduction ...................................................... 138
      7.2.2 Synthesis of Pt Nanoparticles by Plating ................. 139
      7.2.3 Synthesis of Pt Nanoparticles by Sputtering .......... 140
      7.2.4 Supercritical Fluids .......................................... 141
      7.2.5 Experimental Procedure of Metal-Organic
          Chemical Fluid Deposition Using Supercritical
          Carbon Dioxide .................................................... 143
      7.2.6 Characterization of Platinum Nanoparticles Formed
          by Metal-Organic Chemical Fluid Deposition Using
          Supercritical Carbon Dioxide ................................. 144
      7.2.7 Mechanism of Platinum Nanoparticle Formation
          by Metal-Organic Chemical Fluid Deposition Using
          Supercritical Carbon Dioxide ................................. 148
7.3 Pattern Transfer from Carbon Nanowall into SiO₂ Film .......... 151
References ............................................................... 155

8 Future Perspective for Emerging Applications Using
Carbon Nanowalls ...................................................... 159
