Part I Introduction

1	Explaining the Past with ABM: On Modelling Philosophy	3
	Mark W. Lake	
1.1	Introduction	3
1.2	Agent-Based Modelling in Archaeology	4
1.3	Why Agent-Based Modelling?	7
1.3.1	The General Case for Computer Simulation in Archaeology	7
1.3.2	The Conceptual Accessibility of Agent-Based Modelling	10
1.3.3	Agent-Based Modelling as a Scientific Paradigm	12
1.4	Ontological Considerations: Emergence and Rationality	16
1.4.1	The Rationality of Agents	16
1.4.2	The Emergence of Social Phenomena	19
1.5	Epistemic Considerations: How to Learn by Agent-Based Modelling	23
1.5.1	Learning by Simulation Requires Experimentation not Just Emulation	23
1.5.2	The Most Informative Models Are Generative	24
1.5.3	Explanatory Power Trades Complexity Against Fit	26
1.6	Summary	27
	References	28
2	Modeling Archaeology: Origins of the Artificial Anasazi Project and Beyond	37
	Alan C. Swedlund, Lisa Sattenspiel, Amy L. Warren, and George J. Gumerman	
2.1	Introduction	37
2.2	Structure of the Artificial Anasazi (AA) Model	40

2.3	Selected Socio-Ecological Models Similar to Artificial Anasazi ..	42
2.4	Current Efforts: The ALHV Model	46
2.5	Discussion and Conclusions	48
	References	49
 Part II Methods		
3	Agent-Based Simulation in Archaeology: A Characterization	53
	Felix Breitenecker, Martin Bicher, and Gabriel Wurzer	
3.1	Motivation and Classification of Computer Models	53
3.1.1	The Model: Creating an Abstraction of Reality	54
3.1.2	Black-Box and White-Box Models	56
3.1.3	Microscopic and Macroscopic Approach	57
3.2	Introduction to Agent-Based Modelling	60
3.2.1	Formal Description	60
3.2.2	Specification of Time: Discrete or Continuous	66
3.2.3	Specification of the Environment: Discrete or Continuous	68
3.2.4	Stochastic and Deterministic Agent-Based Models	71
3.3	General Advantages and Disadvantages of Agent-Based Models	72
3.3.1	Emergent Behaviour	72
3.3.2	Natural Description of a System	73
3.3.3	Dangers and Problems	74
	References	75
4	Reproducibility	77
	Niki Popper and Philipp Pichler	
4.1	Introduction	77
4.2	Outline	78
4.3	Lifecycle of a Modelling and Simulation Study	78
4.4	Parameter and Output Definition	81
4.5	Documentation	86
4.5.1	Textual Documentation	86
4.5.2	Source Code	88
4.5.3	Visualisation	88
4.6	Verification and Validation	91
4.7	Verification and Validation Specifically Targeted at Agent-Based Models	94
4.8	Conclusion	96
	References	97
5	Geosimulation: Modeling Spatial Processes	99
	Andreas Koch	
5.1	Introduction	99
5.2	Society and Space: Dealing with Intangible Assets and Infrastructures	101

5.3	Scale and Process: Taking Relations and Interdependencies into Consideration	105
5.4	ABM and GIS: Coupling Techniques of Different Methodological Domains	111
5.5	Conclusion	113
	References	114
6	Large Simulations and Small Societies: High Performance Computing for Archaeological Simulations	119
	Xavier Rubio-Campillo	
6.1	Introduction	119
6.2	Background	121
6.3	Developing HPC-Based Simulations	122
	6.3.1 Distribution of Archaeological ABM in Different Computer Nodes	123
	6.3.2 Simultaneous Execution of Agents	125
	6.3.3 Serializing Distributed Simulations	127
	6.3.4 Theoretical Performance of Distributed ABMs	127
6.4	Computational Solutions of Methodological Problems	129
	6.4.1 Parameter Sweeps	129
	6.4.2 Size Dependent Emergence	130
	6.4.3 Solving the Dilemma of Self-fulfilling Prophecies	131
6.5	Concluding Remarks	134
	References	135
 Part III Applications		
7	Mining with Agents: Modelling Prehistoric Mining and Prehistoric Economy	141
	Kerstin Kowarik, Hans Reschreiter, and Gabriel Wurzer	
7.1	Introduction	141
7.2	The Prehistoric Salt Mine of Hallstatt/Upper Austria	143
7.3	Agent-Based Simulation of Mining	144
	7.3.1 Previous Work	144
	7.3.2 Simulating Work Processes	144
7.4	Implementation	147
7.5	Experimentation	149
	7.5.1 Parametrization	149
	7.5.2 Pre-experiments for Narrowing the Parameter Space	150
	7.5.3 Experiments	151
7.6	Discussion	152
7.7	Extensions: Towards Prehistoric Economy	153
7.8	Conclusions and Future Work	157
	Authorship Information	158
	References	158

8	Modelling Settlement Rank-Size Fluctuations	161
	Enrico R. Crema	
8.1	Introduction	161
8.2	Background	162
8.3	Model Design	165
	8.3.1 Basic Model	165
	8.3.2 Integrating Disturbance	167
8.4	Results	169
	8.4.1 Benchmark Model and Spatial Heterogeneity (Scenarios 0 and 1)	170
	8.4.2 Temporal and Spatio-Temporal Disturbance (Scenario 2 and Scenario 3)	172
	8.4.3 Predator-Prey Model (Scenario 4)	175
8.5	Conclusions	177
	References	179
9	Understanding the Iron Age Economy: Sustainability of Agricultural Practices under Stable Population Growth	183
	Alžběta Danielisová, Kamila Olševičová, Richard Cimler, and Tomáš Machálek	
9.1	Introduction	183
9.2	Methodological Approach	185
	9.2.1 Theoretical Framework	185
	9.2.2 Modelling Tools	187
9.3	Data Resources and Modelling Inputs	188
	9.3.1 Environmental Data and Ecology	188
	9.3.2 Socio-Economic Variables	189
	9.3.3 The Agricultural Hinterland	191
	9.3.4 Production Processes	192
9.4	Models	194
	9.4.1 Population Dynamics Model	195
	9.4.2 Crop Production Model	199
	9.4.3 Field Allocation Model	205
9.5	Discussion	210
9.6	Conclusion	212
	References	213
10	Simulating Patagonian Territoriality in Prehistory: Space, Frontiers and Networks Among Hunter-Gatherers	217
	Joan A. Barceló, Florencia Del Castillo, Ricardo Del Olmo, Laura Mameli, Francisco J. Miguel Quesada, David Poza, and Xavier Vilà	
10.1	Introduction	217
10.2	From Ethnicity to Territoriality	218
10.3	Beginning of Times at the End of the World: Patagonia	221

10.4 An Agent-Based Simulation Model for Understanding
the Emergence of Patagonian Ethnicity and Territoriality..... 227

10.5 Running the Model: Preliminary Results 234

10.6 Conclusions..... 247

References..... 248

Part IV Summary and Outlook

11 How Did Sugarscape Become a Whole Society Model? 259
André Costopoulos

11.1 Introduction..... 259

11.2 The Realist-Generalist Ancestral Form 261

11.3 The Realist-Particularist Approach 263

11.4 The Realist-Abstract Border 264

11.5 The Abstract-Generalist Approach 265

11.6 Conclusion..... 267

References..... 268
