Preface vii

0 Introduction 1
  0.1 The main result .................................. 1
  0.2 Background ........................................ 3
  0.3 Local index theorem and Kähler fibrations .......... 4
  0.4 The elliptic superconnections for arbitrary $\omega^M$ .... 4
  0.5 The form $\alpha_0$: the case where $\partial^M \partial^M \omega^M = 0$ .... 5
  0.6 The hypoelliptic superconnections .................. 5
  0.7 The exotic superconnections ....................... 6
  0.8 The hidden role of functional integration .......... 7
  0.9 Operators and characteristic forms ................. 10
  0.10 The hypoelliptic Laplacian ...................... 10
  0.11 Applications ...................................... 11
  0.12 The organization of the book ...................... 12
  0.13 Acknowledgments .................................. 13

1 The Riemannian adiabatic limit 15
  1.1 A smooth submersion ................................ 15
  1.2 The limit of the Levi-Civita connection as $\epsilon \to 0$ .... 16
  1.3 The trilinear form $\rho_0$ .......................... 19

2 The holomorphic adiabatic limit 21
  2.1 A holomorphic fibration ............................. 21
  2.2 The limit as $\epsilon \to 0$ of the connection $\nabla^T_M$ .... 25
  2.3 The Riemannian and holomorphic adiabatic limits .... 28
  2.4 The case where $\omega^M$ is closed .................. 29
  2.5 The exotic connections on $T_R M$ .................. 30
  2.6 The exotic connections on $T_R X$ .................. 34
  2.7 The asymptotics of the exotic connections on $T_R M$ .... 36
3 The elliptic superconnections 41
  3.1 The Clifford algebra ............................................. 41
  3.2 The $\bar{\partial}$ operator on $M$ ............................. 42
  3.3 The antiholomorphic superconnections ......................... 44
  3.4 The variation of the volume form on $X$ ................... 45
  3.5 The adjoint superconnections .................................. 46
  3.6 The elliptic superconnections $A, B, C$ .................... 49
  3.7 The Levi-Civita superconnection ............................. 50
  3.8 A formula relating $B$ and $A_{LC}$ ............................ 52
  3.9 The curvature of the superconnection $B$ .................... 56
  3.10 A curvature identity when $\bar{\partial}^M \partial^M \omega^M = 0$ .... 60

4 The elliptic superconnection forms 63
  4.1 Bott-Chern cohomology and characteristic classes ............ 64
  4.2 The scaling of the form $\omega^M$ ................................ 65
  4.3 A compact Lie group action ..................................... 67
  4.4 Supertraces .......................................................... 69
  4.5 The elliptic superconnection forms $\alpha_{g,t}$ .................. 69
  4.6 The expansion of the forms $\alpha_{g,t}, \gamma_{g,t}$ at $t \to 0$ .... 72
  4.7 The dependence of the forms $\alpha_{g,t}$ on $\omega^M, g^F$ .... 74
  4.8 The direct image as a sheaf ...................................... 75
  4.9 The elliptic Quillen metric ..................................... 76
  4.10 The case where $R^* p_* F$ is locally free ................... 78
  4.11 A non-explicit formula for $\text{ch}_{g,BC}(R^* p_* F)$ ........ 80

5 The elliptic superconnections forms when $\bar{\partial}^M \partial^M \omega^M = 0$ 83
  5.1 An evaluation of $\alpha_{g,0}$ when $\bar{\partial}^M \partial^M \omega^M = 0$ .... 83
  5.2 A proof of Theorem 0.1.1 when $\bar{\partial}^M \partial^M \omega^M = 0$ ...... 89

6 The hypoelliptic superconnections 91
  6.1 The total space of $TX$ and its superconnections ............... 92
  6.2 A holomorphic section of $\pi^* TX$ ............................ 95
  6.3 The superconnections on $\Omega^*(X, \Gamma)$ ................... 96
  6.4 A formula for $\mathcal{A}_Z$ ......................................... 97
  6.5 The Hermitian forms $\epsilon, \eta$ ............................... 98
  6.6 Another expression for $\epsilon, \xi$ .............................. 103
  6.7 The fibrewise connections on $p^* \Lambda^*(T^*_C S) \otimes F$ .... 104
  6.8 A formula for the curvature of $\mathcal{A}_Z$ ..................... 107
  6.9 Hypoelliptic and elliptic superconnections .................... 109
Hypoelliptic Laplacian and Bott–Chern Cohomology
A Theorem of Riemann–Roch–Grothendieck in Complex Geometry
Bismut, J.-M.
2013, XV, 203 p., Hardcover
ISBN: 978-3-319-00127-2
A product of Birkhäuser Basel
