**Contents**

1 Tradition and Innovation: The Case of the Eighteenth and Nineteenth Century Wooden Bridges ........................................ 1
   1.1 The Beginning of a New Path........................................ 1
      1.1.1 The Need for a Rational Criterion......................... 2
      1.1.2 The Quest for a Proper Ratio .............................. 4
   1.2 Alphabetically Ordered Knowledge ................................ 7
      1.2.1 The Encyclopédie ou Dictionnaire Raisonné des Sciences, des Arts et des Métiers ......................... 8
   1.3 Load Bearing Capacity of a Wood Element According to Proportions ...................................................... 12
   1.4 From Beam to Arch: The École des Ponts et Chaussées Concours des Ponts ................................................. 14
   1.5 Jean Grubenmann: A New Idea of Wooden Arch .................. 19
   1.6 Karl Friedrick von Wiebeking: “A New Way to Build Wooden Bridges” ..................................................... 26
   References .................................................................. 30

2 Theory and Tests on Wood Elements in the Nineteenth Century in Architecture and Engineering French Treatises ........ 33
   2.1 Wood Strength: First Tests ......................................... 33
   2.2 The Heritage of Mathematics ....................................... 34
   2.3 Theory Tested by Experience ....................................... 38
   2.4 Experimental Basis of Structural Mechanics .................... 41
   2.5 The Proposal for a Rigorous Approach ........................... 47
   2.6 Load-Based Element Dimensioning ............................... 51
   2.7 A Rigorous Scientific Formula Made Easy ...................... 54
   References .................................................................. 59

3 The Application of Structural Mechanics to Wooden Bridge Design: First Attempts .............................................. 61
   3.1 Cost Effectiveness, Strength and Durability of Town’s System ................................................................. 61
