# Contents

## Part I  Green’s Functions in Singularly Perturbed Domains

1  **Uniform Asymptotic Formulae for Green’s Functions for the Laplacian in Domains with Small Perforations** 3

1.1 Green’s Function for a Multi-dimensional Domain with a Small Hole 3

1.2 Green’s Function for the Dirichlet Problem in a Planar Domain with a Small Hole 9

1.2.1 Asymptotic Approximation of the Capacitary Potential 12

1.2.2 Uniform Asymptotic Approximation 13

1.3 Corollaries 17

2  **Mixed and Neumann Boundary Conditions for Domains with Small Holes and Inclusions: Uniform Asymptotics of Green’s Kernels** 21

2.1 Mixed Boundary Value Problem in a Planar Domain with a Small Hole or a Crack 21

2.1.1 Special Solutions of Model Problems 22

2.1.2 The Dipole Matrix $\mathcal{P}$ 24

2.1.3 Pointwise Estimate of a Solution to the Exterior Neumann Problem 25

2.1.4 Asymptotic Properties of the Regular Part of the Neumann Function in $\mathbb{R}^2 \setminus F$ 27

2.1.5 Maximum Modulus Estimate for Solutions to the Mixed Problem in $\Omega_\varepsilon$, with the Neumann Data on $\partial F_\varepsilon$ 30

2.1.6 Approximation of Green’s Function $G^{(N)}_\varepsilon$ 31

2.1.7 Simpler Asymptotic Formulae for Green’s Function $G^{(N)}_\varepsilon$ 33

4 Numerical Simulations Based on the Asymptotic Approximations … 75
4.1 Asymptotic Formulae Versus Numerical Solution for the Operator \(-\Delta\) ………………… 75
4.1.1 Domain and the Asymptotic Approximation ………………. 76
4.1.2 Example: A Configuration with a Large Number of Small Inclusions ………………… 78
4.1.3 Example: A Configuration with Inclusions of Relatively Large Size ………………… 79
5 Other Examples of Asymptotic Approximations of Green’s Functions in Singularly Perturbed Domains ……… 83
5.1 Perturbation of a Smooth Exterior Boundary …………………… 83
5.2 Green’s Function for the Dirichlet–Neumann Problem in a Truncated Cone …………………… 84
5.3 The Dirichlet–Neumann Problem in a Long Rod ………………… 87
5.3.1 Capacitary Potential …………………… 88
5.3.2 Asymptotic Approximation of Green’s Function ……… 89
5.3.3 Green’s Function \(G_M\) Versus Green’s Functions for Unbounded Domains ……… 92
5.3.4 The Dirichlet–Neumann Problem in a Thin Rod ……… 93
Part II Green’s Tensors for Vector Elasticity in Bodies with Small Defects
6 Green’s Tensor for the Dirichlet Boundary Value Problem in a Domain with a Single Inclusion …………………… 97
6.1 Green’s Representation for Vector Elasticity …………………… 97
6.1.1 Geometry and Matrix Differential Operators ………………… 98
6.2 Estimates for the Maximum Modulus of Solutions of Elasticity Problems in Domains with Small Inclusions ……… 101
6.2.1 The Maximum Principle in \(\Omega\) …………………… 102
6.2.2 The Maximum Principle in \(C\bar{\omega}\) …………………… 102
6.2.3 The Operator Notations …………………… 105
6.3 Green’s Tensor for a Three-Dimensional Domain with a Small Inclusion …………………… 109
6.3.1 Green’s Matrices for Model Domains in Three Dimensions …………………… 109
6.3.2 The Elastic Capacitary Potential Matrix …………………… 110
6.3.3 Asymptotic Estimates for the Regular Part \(h\) of Green’s Tensor in an Unbounded Domain ……… 118
6.3.4 A Uniform Asymptotic Formula for Green’s Function \(G_e\) in Three Dimensions …………………… 119
6.4 Green’s Tensor for a Planar Domain with a Small Inclusion ……… 124
6.4.1 Green’s Kernels for Model Domains in Two Dimensions …………………… 124
6.4.2 Auxiliary Properties of the Regular Part $h$ of Green’s Tensor for an Unbounded Planar Domain and the Tensor $\zeta$ .................. 125
6.4.3 A Uniform Asymptotic Approximation of an Elastic Capacitary Potential Matrix ..................... 127
6.4.4 A Uniform Asymptotic Formula for Green’s Tensor $G_e$ in Two Dimensions ......................... 131
6.5 Simplified Asymptotic Formulae Subject to Constraints on Independent Variables for Green’s Tensors in Domains with a Single Inclusion ..................... 135

7 Green’s Tensor in Bodies with Multiple Rigid Inclusions .......... 139
7.1 Estimates for Solutions of the Homogeneous Lamé Equation in a Domain with Multiple Inclusions ........... 139
7.2 Green’s Tensor for the Lamé Operator in Two-Dimensional Elasticity .................................. 144
  7.2.1 Green’s Matrix for a Two-Dimensional Domain with Several Small Inclusions .................. 144
  7.2.2 Green’s Kernels for Model Domains in Two Dimensions ........................................ 144
  7.2.3 Auxiliary Matrix Functions for Two-Dimensional Elasticity .................................. 146
  7.2.4 A Uniform Asymptotic Formula for Green’s Tensor of Dirichlet Problem of Linear Elasticity in a Domain with Multiple Inclusions ...... 149
7.3 Green’s Matrix for a Three-Dimensional Domain with Several Small Rigid Inclusions .................. 154
  7.3.1 Green’s Tensors for Model Domains in Three Dimensions .................................. 154
  7.3.2 Elastic Capacitary Potential in Three Dimensions ...... 155
  7.3.3 A Uniform Asymptotic Formula for Green’s Tensor in a Three-Dimensional Domain with Several Inclusions .......................... 156
7.4 Simplified Asymptotic Formulae for the Case of a Three-Dimensional Elastic Solid with Several Small Inclusions ........................................ 164

8 Green’s Tensor for the Mixed Boundary Value Problem in a Domain with a Small Hole ................................ 169
8.1 Definition of Green’s Tensor in a Domain with a Single Void ..... 170
8.2 An Estimate for Solutions of the Exterior Neumann Problem for the Homogeneous Lamé Equation.................. 170
8.3 An Estimate for Solutions to the Mixed Problem for the Lamé Equation in the Perforated Domain $\Omega_g$ ........................ 172
8.4 Model Boundary Value Problems ........................................ 175
8.4.1 The Dipole Fields ....................................................... 176
8.4.2 The Elastic Dipole Matrix ............................................. 177
8.4.3 The Asymptotics of the Matrix $W$ at Infinity ................. 178
8.4.4 The Matrix Function $Y$ ................................................ 179
8.4.5 An Estimate for the Regular Part of the
Neumann Tensor in the Unbounded Domain.......................... 179

8.5 A Uniform Asymptotic Formula for $G_x$ of the Mixed
Problem in a Domain with a Void ...................................... 183

8.6 Simplified Asymptotic Formulae for $G_x$ Under
Constraints on the Independent Spatial Variables
for a Domain with a Small Hole ...................................... 186

Part III Meso-scale Approximations: Asymptotic Treatment
of Perforated Domains Without Homogenization

9 Meso-scale Approximations for Solutions of Dirichlet Problems ..... 191
9.1 Main Notations and Formulation of the Problem
in the Perforated Region .................................................. 191
9.2 Auxiliary Problems ........................................................ 193
9.2.1 Solution of the Unperturbed Problem ............................ 193
9.2.2 Capacitary Potentials of $F^{(j)}$ ................................. 193
9.2.3 Green’s Function for the Unperturbed Domain .............. 194
9.3 Formal Asymptotic Algorithm ......................................... 194
9.4 Algebraic System ......................................................... 195
9.5 Meso-scale Uniform Approximation of $u$ ....................... 202
9.6 The Energy Estimate ..................................................... 204
9.7 Meso-scale Approximation of Green’s Function in $\Omega_N$ ...... 212

10 Mixed Boundary Value Problems in Multiply-Perforated
Domains .............................................................................. 221
10.1 An Outline ................................................................. 222
10.2 Main Notations and Model Boundary Value Problems ............ 223
10.3 The Formal Approximation of $u_N$ for the Infinite
Space Containing Many Voids ........................................... 225
10.4 Algebraic System for the Coefficients
in the Meso-scale Approximation ...................................... 227
10.5 Energy Estimate ............................................................ 231
10.6 Approximation of $u_N$ for a Perforated Domain ............... 237
10.6.1 Formal Asymptotic Algorithm
for the Perforated Domain $\Omega_N$ ................................... 237
10.6.2 Algebraic System ....................................................... 238
10.6.3 Energy Estimate for the Remainder ........................... 240
10.7 Illustrative Example ..................................................... 242
10.7.1 The Case of a Domain with a Cloud
of Spherical Voids ......................................................... 242
