## Contents

1 Introduction .......................... 1  
  1.1 Discrete Fracture Network Modeling .............. 3  
  1.2 Review of Stimulation Models .................... 4  
References .................................. 6  

2 Methodology ............................ 13  
  2.1 Governing and Constitutive Equations ............. 13  
  2.2 Initial Conditions .......................... 16  
  2.3 Methods of Solution ........................ 17  
    2.3.1 Iterative Coupling ...................... 17  
    2.3.2 Fracture Deformation: Displacement Discontinuity Method 18  
    2.3.3 Stresses Induced by Normal Displacements of Closed Fractures 19  
    2.3.4 Solution to the Fluid Flow and Normal Stress Equations ......... 20  
    2.3.5 Solution to the Shear Stress Equations .......... 24  
    2.3.6 Inequality Constraints on Fracture Deformations ......... 25  
    2.3.7 Changing Mechanical Boundary Conditions ....... 27  
    2.3.8 Formation of New Tensile Fractures .......... 28  
    2.3.9 Adaptive Time Stepping .................... 29  
    2.3.10 Wellbore Boundary Conditions ............... 30  
  2.4 Spatial Domain ....................... 31  
    2.4.1 Generation of the Discrete Fracture Network .... 31  
    2.4.2 Spatial Discretization .................... 32  
  2.5 Special Simulation Topics ................... 34  
    2.5.1 Efficient Matrix Multiplication ............. 34  
    2.5.2 Crack Tip Regions ....................... 34  
    2.5.3 Dynamic Friction Weakening .................. 36  
    2.5.4 Alternative Method for Modeling Friction ....... 38  
    2.5.5 Adaptive Domain Adjustment ................. 41
Discrete Fracture Network Modeling of Hydraulic Stimulation
Coupling Flow and Geomechanics
McClure, M.; Horne, R.N.
2013, X, 90 p. 42 illus., 41 illus. in color., Softcover
ISBN: 978-3-319-00382-5
