<b>Introduction</b>	<b>1</b>
<b>Basic notation</b>	<b>11</b>
<b>1 Analytic capacity</b>	<b>15</b>
1.1 Introduction . . . . .	15
1.2 Definition and basic properties of analytic capacity . . . . .	15
1.3 Removable sets and the Painlevé problem . . . . .	20
1.4 Two technical lemmas . . . . .	21
1.5 The Cauchy transform and Vitushkin's localization operator . . . . .	22
1.6 Relationship with Hausdorff measures . . . . .	28
1.7 Rectifiable sets and Vitushkin's conjecture . . . . .	34
1.8 Historical remarks, the semiadditivity of $\gamma$ , etc. . . . .	37
1.8.1 Some historical remarks . . . . .	37
1.8.2 Uniform approximation by rational functions and the semi- additivity of analytic capacity . . . . .	37
1.8.3 The approach by duality to analytic capacity . . . . .	39
1.8.4 Other spaces and capacities . . . . .	40
1.8.5 Hausdorff measures . . . . .	41
<b>2 Calderón-Zygmund theory with non-doubling measures</b>	<b>45</b>
2.1 Introduction . . . . .	45
2.2 Preliminaries . . . . .	47
2.3 Covering theorems and maximal operators . . . . .	49
2.4 Doubling cubes and balls . . . . .	53
2.5 Some standard estimates . . . . .	55
2.6 Calderón-Zygmund decomposition . . . . .	57
2.7 Weak (1,1) boundedness of Calderón-Zygmund operators . . . . .	60
2.8 Cotlar's inequality . . . . .	63
2.9 The good lambda method . . . . .	68
2.10 Historical remarks and further results . . . . .	73

<b>3</b>	<b>The Cauchy transform and Menger curvature</b>	<b>75</b>
3.1	Introduction . . . . .	75
3.2	The curvature of a measure . . . . .	76
3.3	The $T1$ theorem for the Cauchy singular integral operator . . . . .	81
3.4	The Cauchy transform on Lipschitz graphs . . . . .	84
3.5	The Cauchy transform on AD regular curves . . . . .	88
3.6	Curvature and Jones' $\beta$ 's . . . . .	91
3.7	Historical remarks and further results . . . . .	98
3.7.1	The Cauchy transform and curvature . . . . .	98
3.7.2	The $T1$ theorem . . . . .	98
3.7.3	The Cauchy transform on Lipschitz graphs and AD regular curves . . . . .	99
3.7.4	Application of the curvature method to other kernels . . . . .	99
<b>4</b>	<b>The capacity <math>\gamma_+</math></b>	<b>103</b>
4.1	Introduction . . . . .	103
4.2	Smoothing of the Cauchy kernel by mollification . . . . .	104
4.3	Dualization of the weak (1,1) inequality . . . . .	107
4.4	The Denjoy conjecture . . . . .	110
4.5	Semiadditivity of $\gamma_+$ . . . . .	112
4.6	Some potential theory for $\gamma_+$ . . . . .	115
4.6.1	A couple of technical lemmas about curvature . . . . .	115
4.6.2	A maximum principle for curvature and for $U_\mu$ . . . . .	117
4.6.3	A dual version for the capacity $\gamma_+$ . . . . .	120
4.7	The capacity $\gamma_+$ of some Cantor sets . . . . .	125
4.8	A quantitative version of Denjoy's conjecture . . . . .	127
4.9	Relationship between $\gamma_+$ and Wolff's potentials . . . . .	129
4.10	Historical remarks and further results . . . . .	132
4.10.1	Denjoy's conjecture, the Davie-Øksendal dualization, and $\gamma_+$ . . . . .	132
4.10.2	Analytic capacity and curvature . . . . .	132
4.10.3	The analytic capacity of the Cantor sets $E(\lambda)$ and Wolff's potentials . . . . .	133
4.10.4	Capacities associated with the signed Riesz kernels . . . . .	134
<b>5</b>	<b>A <math>Tb</math> theorem of Nazarov, Treil and Volberg</b>	<b>137</b>
5.1	Introduction . . . . .	137
5.2	The exceptional set $S$ . . . . .	138
5.3	The suppressed operators $K_\Theta$ . . . . .	140
5.4	Dyadic lattices and the martingale decomposition . . . . .	143
5.4.1	The dyadic Carleson embedding theorem . . . . .	143
5.4.2	Random dyadic lattices . . . . .	145
5.4.3	Transit and terminal squares . . . . .	146
5.4.4	The martingale decomposition . . . . .	146
5.5	Good and bad squares and functions . . . . .	152

5.6	Estimates for good functions . . . . .	153
5.6.1	The main lemma for good functions . . . . .	153
5.6.2	Beginning of the proof of Lemma 5.13 . . . . .	154
5.7	Estimate of the sum $S_1$ : distant squares . . . . .	156
5.8	Estimate of the sum $S_4$ . . . . .	160
5.8.1	Splitting of $S_4$ . . . . .	160
5.8.2	Estimate of $S_{4,1}^{tr}$ via a paraproduct . . . . .	161
5.8.3	Estimate of $S_{4,1}^{term}$ . . . . .	168
5.9	Estimate of $S_2 + S_3$ : the diagonal term . . . . .	172
5.10	Cotlar's inequality revisited . . . . .	176
5.11	The final probabilistic argument . . . . .	181
5.11.1	The low probability of bad squares and functions . . . . .	181
5.11.2	The nice set $G$ . . . . .	185
5.11.3	The functions $\Phi$ , $\Psi_w$ , and the operators $\tilde{K}$ and $\tilde{C}$ . . . . .	187
5.11.4	The key estimates involving $\tilde{C}$ and $\tilde{K}$ . . . . .	188
5.11.5	The final step . . . . .	191
5.12	Historical remarks and further results . . . . .	193
5.12.1	The $Tb$ theorem and analytic capacity . . . . .	193
5.12.2	Other $Tb$ -like theorems . . . . .	194
<b>6</b>	<b>The comparability between <math>\gamma</math> and <math>\gamma_+</math></b> . . . . .	<b>195</b>
6.1	Introduction . . . . .	195
6.2	An argument for sets of finite length . . . . .	196
6.3	Outline of the argument for proving that $\gamma \approx \gamma_+$ . . . . .	200
6.4	An intermediate approximation in terms of $\gamma_+$ . . . . .	202
6.5	Construction of the good measures $\mu$ and $\nu$ . . . . .	206
6.5.1	The construction of $\mu$ and $\nu$ and the proof of (a)–(c) . . . . .	207
6.5.2	The exceptional set $H$ and the proof of (e), (f) . . . . .	208
6.5.3	Proof of (d) . . . . .	209
6.5.4	Proof of (g) . . . . .	213
6.6	Dyadic lattices and the exceptional sets $H_{\mathcal{D}}$ and $T_{\mathcal{D}}$ . . . . .	216
6.6.1	The construction of $H_{\mathcal{D}}$ . . . . .	216
6.6.2	The accretivity condition and the exceptional set $T_{\mathcal{D}}$ . . . . .	217
6.6.3	The size of $H_{\mathcal{D}} \cup T_{\mathcal{D}}$ . . . . .	217
6.7	Application of a $Tb$ theorem . . . . .	218
6.8	The final induction argument . . . . .	220
6.9	Estimate of the Cauchy integral and AD regular curves . . . . .	221
6.9.1	Estimate of the Cauchy integral . . . . .	221
6.9.2	Another proof of the $L^2$ boundedness of the Cauchy trans- forms on AD regular curves . . . . .	225
6.10	Historical remarks and further results . . . . .	226
6.10.1	Analytic capacity . . . . .	226
6.10.2	Other capacities . . . . .	228

<b>7</b>	<b>Curvature and rectifiability</b>	<b>231</b>
7.1	Introduction . . . . .	231
7.2	The quantitative version of the David-Léger theorem . . . . .	233
7.3	The two squares condition, Jones' $\beta$ 's, and curvature . . . . .	235
7.4	The sets $Z$ , $E_1$ and $E_2$ . . . . .	241
7.5	Construction of the Lipschitz graph . . . . .	243
7.6	$E$ and $\Gamma$ are close to each other . . . . .	253
7.7	The set $E_1$ is small . . . . .	256
7.8	The set $E_2$ is small . . . . .	258
7.8.1	The implications $E_2$ big $\Rightarrow \ A'\ _2$ big $\Rightarrow c^2(\mathcal{H}^1[\Gamma])$ big . . . . .	258
7.8.2	The implication $c^2(\mathcal{H}^1[\Gamma])$ big $\Rightarrow c^2(\mu)$ big . . . . .	259
7.9	Three applications . . . . .	276
7.9.1	A characterization of rectifiable sets in terms of pointwise curvature . . . . .	276
7.9.2	A quantitative version of David's theorem . . . . .	277
7.9.3	Characterization of $\gamma$ in terms of measures with bounded upper density . . . . .	279
7.10	Curvature, $\beta$ 's, and rectifiability in the AD regular case . . . . .	281
7.11	Historical remarks and further results . . . . .	286
7.11.1	About the results in this chapter . . . . .	286
7.11.2	Rectifiability, uniform rectifiability and Riesz transforms in arbitrary dimensions . . . . .	286
7.11.3	Other results in connection with curvature . . . . .	288
<b>8</b>	<b>Principal values for the Cauchy transform</b>	<b>289</b>
8.1	Introduction . . . . .	289
8.2	$L^2$ boundedness implies existence of principal values . . . . .	290
8.2.1	Reduction to a class of dense functions . . . . .	290
8.2.2	Existence of principal values on Lipschitz graphs and rectifiable sets . . . . .	293
8.2.3	Plemelj formulas on Lipschitz graphs . . . . .	296
8.2.4	Weak convergence and existence of principal values for measures with zero density . . . . .	300
8.2.5	The final argument for the proof of Theorem 8.1 . . . . .	307
8.3	Finiteness of the maximal Cauchy transform . . . . .	309
8.4	Some consequences . . . . .	312
8.5	Historical remarks and further results . . . . .	314
8.5.1	Existence of principal values on rectifiable sets . . . . .	314
8.5.2	From the analytic information to rectifiability . . . . .	315
<b>9</b>	<b><math>RBMO(\mu)</math> and <math>H_{atb}^1(\mu)</math></b>	<b>319</b>
9.1	Introduction . . . . .	319
9.2	The space $RBMO(\mu)$ . . . . .	321
9.2.1	Introduction . . . . .	321

9.2.2	The coefficients $K_{Q,R}$ . . . . .	321
9.2.3	The definition of $RBMO(\mu)$ . . . . .	323
9.2.4	Equivalent definitions . . . . .	326
9.2.5	Boundedness of CZO's from $L^\infty(\mu)$ to $RBMO(\mu)$ . . . . .	330
9.2.6	Some examples . . . . .	334
9.3	The John-Nirenberg inequality . . . . .	336
9.4	The Hardy spaces $H_{atb}^{1,p}(\mu)$ . . . . .	340
9.5	The duality $H_{atb}^{1,p}(\mu)$ - $RBMO(\mu)$ . . . . .	347
9.6	Another maximal operator and another covering theorem . . . . .	353
9.7	The sharp maximal operator . . . . .	356
9.8	Two interpolation theorems . . . . .	360
9.9	The $T1$ theorem for the Cauchy transform again . . . . .	365
9.10	The $T1$ theorem in terms of $RBMO(\mu)$ and $BMO_\rho(\mu)$ . . . . .	369
9.11	Historical remarks and further results . . . . .	376
9.11.1	About $RBMO(\mu)$ and $BMO(\mu)$ . . . . .	376
9.11.2	Other related results . . . . .	376
9.11.3	$Tb$ theorems . . . . .	378
