## Contents

### 1 Nature of Earthquakes

1.1 Dynamic Earth Structure ........................................ 1
   1.1.1 Continental Drift ........................................ 4
   1.1.2 Theory of Global Plate Tectonics ......................... 6
1.2 Earthquake Process and Faults ............................... 14
1.3 Seismic Waves .................................................. 17
1.4 Magnitude of an Earthquake .................................. 21
1.5 Intensity of an Earthquake ................................... 24
   1.5.1 Instrumental Intensity ................................... 24
   1.5.2 Observational Intensity .................................. 28
1.6 Effects of Earthquakes on Built Environment ............... 34
   1.6.1 Strong Ground Shaking ................................... 34
   1.6.2 Fault Rupture .............................................. 34
   1.6.3 Geotechnical Deformations ............................... 36

### 2 Seismic Hazard Assessment

2.1 Introduction ..................................................... 41
2.2 Seismicity and Earthquake Recurrence Models ............... 42
2.3 Ground-Motion Prediction Equations
   (Attenuation Relationships) .................................... 50
2.4 Probabilistic Seismic Hazard Analysis ....................... 53
2.5 Deterministic Seismic Hazard Analysis ....................... 61
2.6 Uniform Hazard Spectrum ..................................... 63
2.7 Basic Probability Concepts ................................... 63

### 3 Response of Simple Structures to Earthquake Ground Motions

3.1 Single Degree of Freedom Systems ............................ 75
   3.1.1 Ideal SDOF Systems: Lumped Mass and Stiffness ........ 75
   3.1.2 Idealized SDOF Systems: Distributed
         Mass and Stiffness ........................................ 76
3.2 Equation of Motion: Direct Equilibrium ...................... 77
3.3 Equation of Motion for Base Excitation ...................... 78
3.4 Solution of the SDOF Equation of Motion .................... 79
   3.4.1 Free Vibration Response ................................ 79

5.6 Solution of Equation of Motion Under Earthquake Excitation
5.6.1 Summary: Modal Superposition Procedure
5.6.2 Response Spectrum Analysis
5.6.3 Modal Combination Rules
5.6.4 Equivalent Static (Effective) Modal Forces
5.7 Limitations of Plane Frame (2D) Idealizations for 3D Frame Systems
5.8 Nonlinear Static (Pushover) Analysis
5.8.1 Capacity Curve for Linear Elastic Response
5.8.2 Capacity Curve for Inelastic Response
5.8.3 Target Displacement Under Design Earthquake
5.9 Seismic Response Analysis of Base Isolated Buildings
5.9.1 General Principles of Base Isolation
5.9.2 Equivalent Linear Analysis of Base Isolation Systems with Inelastic Response
5.9.3 Critical Issues in Base Isolation

6 Analysis Procedures and Seismic Design Principles for Building Structures
6.1 Introduction
6.2 Rigid Floor Diaphragms and Dynamic Degrees of Freedom in Buildings
6.3 Equations of Motion for Buildings Under Earthquake Base Excitation
6.3.1 Mass Matrix
6.3.2 Stiffness Matrix
6.4 Free Vibration (Eigenvalue) Analysis
6.4.1 The Effect of Building Symmetry on Mode Shapes
6.5 Analysis Procedures for Buildings in Seismic Codes
6.6 Modal Response Spectrum Analysis
6.6.1 Summary of Modal Response Spectrum Analysis Procedure
6.6.2 The Minimum Number of Modes
6.6.3 Accidental Eccentricity
6.7 Equivalent Static Lateral Load Procedure
6.7.1 Base Shear Force in Seismic Codes
6.7.2 Estimation of the First Mode Period T1
6.7.3 Lateral Force Distribution in Seismic Codes
6.8 Basic Design Principles and Performance Requirements for Buildings
6.9 Structural Irregularities
6.9.1 Irregularities in Plan
6.9.2 Irregularities in Elevation
6.9.3 Selection of the Analysis Procedure
6.10 Deformation Control in Seismic Codes

6.10.1 Interstory Drift Limitation

6.10.2 Second Order Effects

6.10.3 Building Separations

7 Seismic Design of Reinforced Concrete Structures

7.1 Introduction

7.2 Capacity Design Principles

7.3 Ductility in Reinforced Concrete

7.3.1 Ductility in Reinforced Concrete Materials

7.3.2 Ductility in Reinforced Concrete Members

7.4 Seismic Design of Ductile Reinforced Concrete Beams

7.4.1 Minimum Section Dimensions

7.4.2 Limitations on Tension Reinforcement

7.4.3 Minimum Compression Reinforcement

7.4.4 Minimum Lateral Reinforcement for Confinement

7.4.5 Shear Design of Beams

7.5 Seismic Design of Ductile Reinforced Concrete Columns

7.5.1 Limitation on Axial Stresses

7.5.2 Limitation on Longitudinal Reinforcement

7.5.3 Minimum Lateral Reinforcement for Confinement

7.5.4 Strong Column-Weak Beam Principle

7.5.5 Shear Design of Columns

7.5.6 Short Column Effect

7.6 Seismic Design of Beam-Column Joints in Ductile Frames

7.6.1 Design Shear Force

7.6.2 Design Shear Strength

7.7 Comparison of the Detailing Requirements of Modern and Old Seismic Codes

7.8 Seismic Design of Ductile Concrete Shear Walls

7.8.1 Seismic Design of Slender Shear Walls

7.8.2 Seismic Design of Squat Shear Walls

7.9 Capacity Design Procedure: Summary
