Real Options with Competition and Incomplete Markets ........ 29
Alain Bensoussan and SingRu (Celine) Hoe
1 Investment Game Problems and General Model Assumptions .. 30
2 Follower’s Problem and Solution .................................. 31
   2.1 Postinvestment Utility Maximization ....................... 32
   2.2 Preinvestment Utility Maximization ....................... 34
   2.3 Follower’s Optimal Stopping Rule ......................... 37
3 Leader’s Problem and Solution .................................... 38
   3.1 Postinvestment Utility Maximization ....................... 38
   3.2 Leader’s Optimal Stopping Rule ......................... 44
4 Conclusion ............................................................... 44
References .................................................................... 45
## Dynamic Hedging of Counterparty Exposure

Tomasz R. Bielecki and Stéphane Crépey

### 1 Introduction

1.1 General Set-up

### 2 Cashflows

2.1 Re-hypothecation Risk and Segregation

2.2 Cure Period

### 3 Pricing

3.1 CVA

3.2 Collateral Modeling

### 4 Common Shock Model of Counterparty Credit Risk

4.1 Unilateral Counterparty Credit Risk

4.2 Model of Default Times

4.3 Credit Derivatives Prices and Price Dynamics in the Common Shocks Model

### 5 Hedging Counterparty Credit Risk in the Common Shocks Model

5.1 Min-Variance Hedging by a Rolling CDS on the Counterparty

5.2 Multi-instruments Hedge

### References

Mean Square Error and Limit Theorem for the Modified Leland
Hedging Strategy with a Constant Transaction Costs Coefficient

Sébastien Darses and Emmanuel Lépinette

1 Introduction ............................................................................. 159
2 Notations and Models ............................................................ 161
2.1 Black–Scholes Model and Hedging Strategy ....................... 161
2.2 Reminder About Leland’s Strategy ...................................... 162
2.3 A Possible Modification of Leland’s Strategy ..................... 163
2.4 Assumptions and Notational Conventions ............................ 164
3 Main Result ............................................................................. 165
4 Auxiliary Results .................................................................... 166
4.1 Geometric Brownian Motion and Related Quantities ............. 166
4.2 Basic Results Concerning the Revision Dates .................... 168
5 Proof of the Limit Theorem .................................................... 170
5.1 Step 1: Splitting of the Hedging Error ............................... 171
5.2 Step 2: The Mean Square Residue Tends to 0 with Rate $n^{\frac{1}{2}+2p}$ 171
5.3 Step 3: Asymptotic Distribution ......................................... 184
5.4 Conclusion ............................................................................ 190
